## Volume B

### 1.10 Web openings

- Steel and composite cellular beams – Novel approach for design based on experimental studies and numerical investigations  
  *D. Bitar, T. Demarco, P.-O. Martin*
  
- Experimental behaviour of composite beams with web openings  
  *O. Hechler, C. Müller, G. Sedlacek*
  
- Strength of composite beams with trapezoidal web openings  
  *A.Q. Melhem*
  
- Plastic dimensioning of double symmetrical steel and composite beams with large rectangular web openings  
  *S. Kind*
  
- Design of composite asymmetric cellular beams  
  *R.M. Lawson, S.J. Hicks, J. Lim, W.I. Simms*

### 1.11 Fatigue

- Effective use of high strength steels in welded structures under fatigue loading  
  *U. Kuhlmann, A. Dürer, J. Bergmann, R. Thumser*
  
- S-N curves for the “breathing” webs of steel griders subjected to repeated loading  
  *M. Škaloud, M. Zörnerová*
  
- Field testing of dispersion layers to reduce fatigue damage in orthotropic steel bridge decks: Conceptual new steel deck design for highway bridges  
  *H. De Backer, W. De Corte, B. De Pauw, P. Van Bogaert*
  
- Improving fatigue strength of welded beams by using fatigue crack arresting steel  
  *M. Sakano, D. Nimura, K. Matumoto, A. Isoda, S. Kondo, K. Arimochi, N. Konda*

### 1.12 Fracture mechanics

- Strength analysis of fillet welded steel connections  
  *A.K. Jamshidi, P.C. Birkemoe*
  
- Assessment of limit internal pressure of gas for transmission pipelines by using Eurocode 3  
  *J. Rzadkowski, A. Maciejewska*
  
- Damage mechanics approach to low-cycle fatigue of steel structures  
  *P. Skuber, J. Korelc, D. Beg*
  
- Post weld treatment to improve the fatigue performance of turbular bridge structures  
  *S. Walbridge, N. Nussbaumer*
  
- Low cycle crack propagation and loosening in the critical joints  
  *M. Leonavičius, A. Krenevičius, S. Stupak, M. Šukšta, R. Kliukas*
  
- Fatigue analysis of steel structure subjected to repeated loading – Sensitivity approach  
  *Z. Kala*
  
- Fracture resistant design of welded joints  
  *M. Wasicek, F.D. Fischer, O. Kolednik, I. Sabirov, R. Greiner*
2 New materials and structural performance

2.1 Corrosion

Experimental research on cathode protection in steel structures 2.1-1
X.A. Lignos, G.T. Michaltsos, G.B. Benekos, P.M. Malesios

2.2 Fabrication

Behaviour of plate girders with single-sided fillet welds 2.2-2
G. Jakab, L. Dunai, R.T. Macdonald

Modern beam-welding technologies in advanced pipe manufacturing 2.2-9
U. Dilthey, K. Woeste, S. Olschok

2.3 Facades

Glass-aluminium facades in steel buildings: Analysis of their performance under dynamic loadings 2.3-1
K.T. Chatzinikos, C.C. Baniotopoulos

2.4 Glass

The experimental verification of actual behaviour of the glass roofing structure under uniform loading 2.4-1
J.J. Melcher, M. Karmazinová

Stability of load carrying elements of glass 2.4-9
M. Crisinel, A. Luible

Design for structural stability of glass compression members 2.4-17
A. Luible, M. Crisinel

A proposal for the new Spanish code of practice for glass elements in steel structures 2.4-25
A. Fernández-Canteli, M.A. García-Prieto, E. Real, M.A. Serrano, M.J. Lamela

2.5 Materials

Structural design for non-linear metallic materials 2.5-1
L. Gardner

Structural safety of modern high strength steel in welded construction 2.5-7
P. Langenberg, W. Dahl

Design of cast iron columns with explicit calculation of the tension fracture capacity 2.5-15
J. Rondal, K.J.R. Rasmussen
3 Unified European design rules

Operational scheme for member design to Eurocode 3
A. Czechowski

An efficient training approach on Eurocodes for engineers in construction
M.A. Serrano, I.W. Burgess, S.E. Armstrong

Longitudinal shear resistance of composite slabs, found from non-standard test data
R.P. Johnson

Member stability at plastic hinges – The background to Annex BB.3.
C. King

Towards common unified European design rules for steel arches

Report on use of Eurocode rules for bridge design in Germany
H. Eisel, M. Paschen, G. Sedlacek

4 Innovative steel and composite structures for bridges and buildings

4.1 Monitoring

Methods of the structural condition monitoring
F. Rangelova, D. Panichkov

Assessment of steel structures
Z. Agócs, J. Brodniansky

4.2 Composite construction

Shear properties of bonded T-shaped shear connector
K. Takami, N. Ishii, S. Hamada

Experimental study on rigidly connected steel pipe in girder and concrete pier with perfobond rib shear connectors
T. Nishido, H. Iwasaki

Cracking of concrete deck in composite structures
J. Bujňák, J. Odrobiňák

Composite steel-concrete beams and columns fabricated with high strength steel (HSS) plate
B. Uy

Composite behaviour of steel frames with precast concrete infill panels
J.C.D. Hoenderkamp, H. Hofmeyer, H.H. Snijder

An estimation formula for the positive flexural strength of steel-concrete composite sections considering steel material properties
S. Nakamura, K. Egashira, K. Takahashi, Q. Wu

Push-out tests on headed studs covered with UHPC
S. Rauscher, J. Hegger, C. Goralski

Shear connectors for composite members of high strength materials
B. Hauke
4.3 Composite beams

Perfobond shear connector behaviour
J. Marecek, J. Samec, J. Studnicka

Behaviour of shallow floor composite beams with solid types of slab
M.V. Leskelä, S. Peltonen

Numerical model for steel concrete composite beam with partial shear connection
J. Bužňák, A. Bouchair

Experimental investigation of composite light-gauge floor beams
S. Erdélyi, L. Dunai

Comparison of shear resistance models with slender composite beam test results
J.-P. Lebet, A. Lääne

A deformation-based approach for the minimum degree of partial shear connection in composite beams
R. Bärtschi, M. Fontana

Structural assessment of composite beams using the finite element method
F.D. Queiroz, P.C.G.S. Vellasco, D.A Nethercot

Partial interaction analysis of composite beams with a discrete distribution of shear connectors
G. Ranzi

A BEM solution to transverse shear stresses in composite steel – Concrete beams
V.G. Mokos, E.J. Sapountzakis

Experimental studies on shear connection between steel and lightweight concrete using studs
P.J.S. Cruz, I. Valente, J. Hegger, S. Rauscher, C. Goralski

Experimental analysis on steel and lightweight concrete composite beams
P.J.S. Cruz, I. Valente

Ultimate behavior and strength of composite girder – Proposition of innovative design method
M. Nagai, V.K. Gupta, Y. Okui, Y. Yasukawa, N. Inaba

Contribution to the methods of analysis of composite steel-wood beams, regarding rheology
D. Partov, V. Kantchev

Experimental study of long span composite beams with precast hollow-core slabs
A. Murad, D. Lam

Interaction between concrete encasement and structural steel
C. Goralski, J. Hegger
4.4 Composite columns
Concrete filled circular steel tubes as foundation piles
  M.V. Leskela, S. Eronen, H. Jokiniemi
  4.4-1
Structural members reinforced with innovative prefabricated steel
  H. Sezen, M. Shamsai
  4.4-9

4.5 Composite slabs
Optimised steel sheet profile for composite slabs – A design optimisation
  procedure using 3D non-linear finite elements
  M. Ferrer, F. Marimon, F. Roure, M. Crisinel
  4.5-1
Load-deformation- and vibration-behaviour of new types of composite
  slim-floor slabs
  C. Butz, O. Hechler, H. Trumpf
  4.5-9
Preliminary testing of an ultra long-spanning, hybrid steel decking
  M. Gläsle, M. Patrick
  4.5-17

4.6 Composite bridges
Steel and concrete composite integral bridges
  F. Roller, J. Studnička
  4.6-1
Load-carrying capacity of composite girders in cable-stayed bridges
  Y. Okui, M. Nagai, E. Iwasaki, T. Hirono
  4.6-7
Comparison of LRFD and ASD from economical viewpoint regarding design of
  two-span continuous composite two-plate-girder bridge
  T. Sugiyama
  4.6-13
Inelastic behavior of continuous composite beams with hybrid girder
  4.6-21
Viaduct across the stream “Las Piedras”: The first high-speed railway line steel
  concrete composite bridge in Spain
  F. Millanes, J. Pascual
  4.6-29
Design of slender composite bridges using support region limited ductility
  A. Lääne, J.-P. Lebet
  4.6-37
Tubular bridges and the fatigue design of their joints
  S.C. Haldimann-Sturm, A. Nussbaumer
  4.6-45
Effects of temperature, shrinkage and creep on integral bridges
  A. Romeijn, C. van der Veen, N. Kaptijn
  4.6-53
Sustainable and life-cycle assessment of steel-concrete composite plate girder
  bridges: A case study
  H. Gervásio, L. Simões da Silva
  4.6-61
Railway viaduct near Česká Třebová
  V. Podlipný, R. Šafár, P. Klimeš
  4.6-71
Composite bridges with VFT-WIB-construction method – Robust and long-
  lasting modular systems
  V. Schmitt, G. Seidl, M. Hever
  4.6-79
4.7 Steel bridges

Ultimate behaviors and strength of steel cable-stayed bridges with a tower height-to-span ratio of 1/10
   K. Nogami, Y. Akimoto, T. Yamasawa, Y. Morizono, M. Nagai

On the inelastic design of steel I-girder bridges
   K.E. Barth, J.E. Righman

Dynamic behaviour of steel trussed railway bridges due to the passage of high speed trains
   M. Heiden, L. Simões da Silva, M. Pircher, H. Pircher, C. Rebelo

Experimental approach to lateral buckling of steel tied arch bridges
   P. Van Bogaert, B. De Pauw, W. De Corte, H. De Backer

Most unfavourable traffic load cases for complex highway bridges
   H. Unterweger

Suspension bridge over the Albert Canal in Kanne (B) – Designed according to the Eurocodes
   R. Debruyckere, W. Hoeckman, D. Tuinstra

Strength of an arch bridge model: Experiment and design methods
   A.L. Joó, L. Dunai

Steel bridge system – Simple for dead load, continuous for live
   A. Azizinamini, M. Jamshidi

An unusual externally prestressed 110-m span footbridge at Valladolid (Spain)
   M. Gómez Navarro, J. Martinez Calzón

Zouthaven footbridge – An investigation in the dynamical properties of a lightweight footbridge
   M.C. Aalstein

The new Cerkvenikov Bridge over Hanke Channel in Škocjanske Jame Caves
   G. Gruden

Span extension of H-beam bridges by steel plate pre-stressing

Predicting and optimizing lifetime performance of existing steel bridges under preventive and essential maintenance actions
   L.C. Neves, D.M. Frangopol, P.S. Cruz

The dilemma between structural safety and maintenance of national heritage
   G.J.J. Wurth, S.M. den Blanken
