Conference Organization vi

Preface vii

RELATIVISTIC ASTROPHYSICS AND COSMOLOGY 1

Joseph Silk
Dark matter and galaxy formation: Challenges for the next decade 3

Margaret Geller
Where the Dark Matter is ... and isn't 18

Damien Easson
Cosmic acceleration and modified gravity models 27

Tirthabir Biswas
Can we have a stringy origin behind $\Omega_\Lambda(T) \propto \Omega_M(T)$? 32

S. Shankarnarayanan
Planck scale effects and the suppression of power on the large scales in the primordial spectrum 38

Takayuki Hirayama
Classical ghosts and the cosmological constant 43

Kenji Kadota
Inflation model building in moduli space 48

Constantinos Skordis
Getting around cosmic variance of the CMB temperature quadrupole 53
Rudnei Ramos
*On the effective evolution for the inflaton* 58

Masahide Yamaguchi
*Inflation models in supergravity with a running spectral index* 63

Wan-il Park
*Modular cosmology, thermal inflation, baryogenesis and a prediction for particle accelerators* 68

Tomo Takahashi
*Accelerating universe and modified gravity* 73

Luis Anchordoqui
*The Pierre Auger Observatory: Science prospects and performance at first light* 78

**DARK MATTER AND DARK ENERGY** 83

Pierre Sikivie
*Cold dark matter flows and caustics* 85

Rita Bernabei
*DAMA results and perspectives* 95

Rupak Mahapatra
*First results from the CDMS at Soudan* 105

Alexander Kaganovich
*New field theory effect at energy densities close to the dark energy density* 115

Antonio L Maroto
*Branon dark matter: an introduction* 120

**NEUTRINO PHYSICS** 125

Sandip Pakvasa
*Neutrino properties from high energy astrophysical neutrinos* 127
Steve King
*Neutrino mass models and leptogenesis* 140

D. P. Roy
*Solar neutrino oscillations – an overview* 150

Ion Stancu
*Status of the MiniBooNe experiment* 167

José Maneira
*Solar neutrino results from SNO* 177

Stefan Antusch
*Implications of running neutrino parameters for leptogenesis and for testing model predictions* 187

Marco Cirelli
*Sterile neutrinos in cosmology, and supernovae* 192

Roberto Floreanini
*Neutrino oscillations in random media* 197

K. T. Mahanthappa
*Fermion masses and neutrino oscillations in SO(10) × SU(2)F* 202

Sergei Bashinsky
*Robust signatures of the relic neutrinos in CMB* 212

Takahiro Kubota
*Radiative corrections to neutrino reactions off proton and deuteron* 217

ACCELERATOR EXPERIMENTS 223

Markus Schumacher
*Searches for new physics at LEP* 225

Rahul Malhotra
*Discovering the Higgs bosons of minimal supersymmetry with tau-leptons and a bottom quark* 235
Pushpalatha C Bhat
Electroweak and top physics results from DØ

Dmitri Tsybychev
Status of searches for Higgs and physics beyond the standard model at CDF

Nick Hadley
Searches for new phenomena with the DØ detector

Chiara Genta
Searches for new physics at HERA

Roberto Chierici
Electroweak physics at LEP2 and the fit to the standard model

Stefano Lacaprara
Searching for dark matter at the LHC

ELECTROWEAK PHYSICS

Marco Fabbrichesi
A heavy Higgs boson from flavor and electroweak symmetry unification

Max Chaves
The standard model results from a scheme to protect the mass of the scalar bosons

Deog Ki Hong
Opening the window for technicolor

Colin Froggatt
The hierarchy problem and an exotic bound state

CP, CPT AND LORENTZ INVARINANCE VIOLATION

Shiro Suzuki
Recent results from Belle
Alfred Bartl
*Effects of CP phases on the phenomenology of SUSY particles* 347

Apostolos Pilaftsis
*Phenomenological implications of resonant leptogenesis* 357

Roland E Allen
*Sfermions and gauginos in a Lorentz-violating theory* 366

**SUSY PHENOMENOLOGY** 371

Michael Malinsky
*Fermion masses and mixings in next to minimal SUSY SO(10) GUT* 373

Ting Wang
*High scale study of possible $B_d \to \phi K_S$ CP physics* 378

Rishikesh Vaidya
$\bar{B} \to X_s + \gamma$ in supersymmetry without $R$-parity 383

Mario Gómez
*mSUGRA dark matter and the $b$ quark mass* 388

Bhasker Dutta
*Neutrino masses, mixings in a minimal SO(10) model and leptonic flavor violation* 394

Daniel Larson
*Proton decay and the Planck scale* 399

Shaaban Khalil
*Supersymmetric contributions to the CP asymmetry of the $B \to \phi K_S$ and $B \to \eta' K_S$* 404

Takeo Moroi
*Hadronic decay of the gravitino in the early universe and its implications to inflation* 411
Arunansu Sil
Inflation and leptogenesis in a SUSY left-right model and its conjecture about b-τ unification 417

Ian Jack
Precision calculation of mass spectra in the MSSM 424

STRING THEORY, STRING PHENOMENOLOGY, EXTRA DIMENSIONS 435

Boris Körs
How Stueckelberg extends the standard model and the MSSM 437

Thomas Dent
Fermion masses and proton decay in a string inspired $SU(4) \times SU(2)^2 \times U(1)_X$ model 448

Filipe Freire
Can out-of-equilibrium plasma effects create embedded strings? 453

Louis Clavelli
SUSY origin of gamma ray bursts 458

Mariano Quiros
Tadpoles and symmetries in Higgs-Gauge unification theories 468

Emilian Dudas
Vector/tensor supersymmetric duality in five dimensions and applications 478

Ilya Shapiro
Anomaly-induced inflation 488

Scott Watson
Stability moduli with string cosmology 493

Dmitri Burshtyn
Probing orientifold behavior near NS branes 498
RECENT THEORETICAL DEVELOPMENTS

Roman Jackiw
*Pure cotton kink in a funny place*

M. Shifman
*Planar equivalence: from type 0 strings to QCD*

Tom Kephart
*Knot energies and the glueball spectrum*

Alfredo Macias
*On the experimental testing of the Dirac equation*

George Siopsis
*Perturbative calculation of quasi-normal modes*

Hung-Ming Tsai
*Resolution of the infrared divergence in QFT*

A. A. Garcia
*Electromagnetic fields in stationary cyclic symmetric 2 + 1 gravity*

PHOTOGRAPHS AND LIST OF PARTICIPANTS
