Microwave & Radar Week, Warsaw, Poland

International Radar Symposium

IRS 2004

19 - 21 May 2004
Warszawa, Poland

Proceedings

organised by
Telecommunications Research Institute
Przemysłowy Instytut Telekomunikacji (PIT)

German Institute of Navigation
Deutsche Gesellschaft für Ortung und Navigation e.V. (DGON)

Warsaw University of Technology
Politechnika Warszawska (PW)

Hamburg - Harburg University of Technology
Technische Universität, Hamburg - Harburg (TUHH)
Table of Contents

Preface
H. Rohling, Krzysztof Kulpa, Symposium Chairman .......................................................... 13

OPENING SESSION

Keynote address
B. L. Sm61ski, Military University of Technology, POLAND .......................................... 19

PASSIVE AND LPI RADARS

Development of Signal Processing Algorithms in Radars
T. Brenner, W. Klembowski, W. Wizner, Telecommunications Research Institute, POLAND ...... 27

Ambiguity Function of Noise Pulses Train and it's Distortions in Noise Radar Receiver
K.A. Lukin, A.A. Mogyla and Y.A. Shiyan, Usikov Institute for Radiophysics and Electronics
NAS of Ukraine, UKRAINE ........................................................................................................ 37

Noise Radar Performance Using Random Phase or Frequency Modulation

The Performance Evaluation of the Marine Low-Probability-Of-Intersept Radar
S.P. Kalenichenko, L.S. Mettus and V.I. Veremjev, Saint Petersburg Electrotechnical University
LETY, RUSSIA .......................................................................................................................... 49

Adaptive clutter rejection in bi-static CW radar
K. Kulpa, Warsaw University of Technology, POLAND ......................................................... 61

AUTOMOTIVE RADAR

Target Recognition in Automotive Radar Systems
H. Rohling, F. Kruse, F. Fölster, M. Ahrholdt, Technical University Hamburg-Harburg,
GERMANY ................................................................................................................................. 69

Detection and Tracking of extended targets for a 24 GHz automotive radar network
F. Fölster, D. Oprisan, S. Görner, H. Rohling, Hamburg University of Technology, GERMANY..... 75

System for Automatic Parking using Radar-based Parking Slot Recognition
B. Waldmann, R. Petelka, R. Mende, Smart Microwave Sensors GmbH, GERMANY
M.M. Meinecke, Volkswagen AG, Research Electronic Systems, GERMANY .......................... 81

RADAR SYSTEMS

Radiating Element Geometry for Phased Array Radars
M.J. Dorsett, J.H. Hennings, SMDC-TC-BE, USA ................................................................. 87

Doppler-Polarimetric Approach for Supercooled Water Detection in Clouds and
Precipitation by Airborne Weather Radar
F.J. Yanovsky, National Aviation University, UKRAINE ......................................................... 93

New signal processing techniques in SSR-Mode S replies multilateration for A-SMGCS
G. Galati, M. Gasbarra, M. Leonardi, P. Magarò, Tor Vergata University and Vito Volterra
Centre, ITALY .......................................................................................................................... 101

Effect of interferences on information flow in sensor networks
K.S. Kulpa, Institute of Electronic Systems, POLAND
A. Piotrowski, EWRD, AUSTRALIA ....................................................................................... 107

A Numeric Approach to the Evaluation of Real Radar Coverage with Multipath Interference
and Diffraction Effects
Z. Czekala, Scientific-Industrial Centre of Professional Electronics RADWAR SA, POLAND ...... 113
RADAR TOOLS

A Target Generator for Producing Radio Frequency Signals with Extended Targets in Range and Doppler
D. Nagel, S. Smith, EADS Deutschland GmbH, GERMANY .................................................. 121

DPCR - Development Platform for Digital Communications and Radars
S. Babalov, V. Vasilev, P. Daskalov, Multiprocessor Systems Ltd, BULGARIA
H. Kabakchiev, Institute of Information Technologies- BAS, BULGARIA .................................. 131

Fuzzy Logic Controller with Rule Base Learning in Multifunctional Radar Resources Management
Ł. Pajak, W. Komorniczak, Military University of Technology, POLAND
L. Lecornu, École Nationale Supérieure des Télécommunications de Bretagne, FRANCE .......... 137

Hardware/Software Co-Design in DSP-Based Radar and Sonar Systems
M. Nalęcz, K. Kulpa, A. Piątek, Institute of Electronic Systems, POLAND
M. Mordzonek, Telecommunications Research Institute, POLAND ........................................ 143

An Approach to Software Simulation and Evaluation of Radar Systems
M. Sankowski, J. Popik, P. Uruski, T. Rutkowski, Telecommunications Research Institute, POLAND ................................................................. 149

SAR

Multichannel SAR Imaging using Wavefront Reconstruction
L. Rosenberg, D. Gray, University of Adelaide, AUSTRALIA ..................................................... 155

The Use of Autofocus SAR Algorithm in Platform Velocity Estimation
K. Kulpa, G. Pietrzyk, P. Samczyński, B. Dawidowicz, Warsaw University of Technology, POLAND ............................................................. 161

First Airborne FM-CW SAR Campaign
J. J. M. de Wit, A. Meta, and P. Hoogeboom, International Research Centre for Telecommunications-transmission and Radar Delft University of Technology, NETHERLANDS ... 165

Data recording and processing in FMCW SAR system
M. Nalęcz, K. Kulpa, R. Rytel-Andrianik, B. Dawidowicz, Warsaw University of Technology, POLAND
S. Plata, Telecommunications Research Institute, POLAND ......................................................... 171

RADAR TECHNOLOGY I

Volume and Integrated p-i-n Modulators in Millimeter Frequency Range
M. Tecpoyotl-Torres, S. Koshevaya, V. Grimalsky, J. Escobedo-Alatorre and J. Sánchez-Mondragón, Autonomous State University of Morelos, MÉXICO
I. Moroz, T. Shevchenko Kiev National University, UKRAINE ........................................ 179

Latest Trends in Radar Cross Section (Rcs) Measurement and Reduction Techniques
S. Padhy, Proof & Experimental Establishments, Defence R&D Organisation, INDIA ................. 185

Sensitivity of Inversion Empirical Model of Backscattering from Bare Soil
G.P. Kulemin, Y. Goroshko, A.J.Usikov Institute of Radiophysics and Electronics NAS of Ukraine, UKRAINE ....................................................... 191

Applying The Radiated Emission To The Specific Emitter Identification
J. Dudczyk, Military Unit 4159, POLAND
M. Wnuk, J. Matuszewski, Military University of Technology, POLAND .................................. 197

ISAR AND REMOTE SENSING

Time Domain Far and Near Field ISAR Imaging
B. Levitas, J. Matuzas, Geozondas JSC, LITHUANIA ................................................................. 205
Target and Radar Platform Motion Compensation in ISAR Ship Imaging
K.S. Kulpa, M. Purchla, M. Malanowski, Warsaw University of Technology, POLAND .......................... 211

ISAR Image Reconstruction with Defective Rotation Angle Data
K. Sasaki, H. Shimizu, Y. Watanabe, Nippon Institute of Technology, JAPAN ................................. 215

W.M. Boerner, J.J. Morisaki, University of Illinois at Chicago-ECE/CSN, USA ................................. 219

CFAR

A GLR Detector in Auto-Regressive Interference with Gaussian Spectrum for Airborne Radar Applications
M.R. Moniri, Oloom-va-Tahghihat Islamic Azad University, IRAN
M.M. Nayebi, Sharif University of Technology, IRAN
A. Sheikhi, Shiraz University, IRAN ........................................................................................................ 227

Sensitivity of API CFAR Detectors Towards Change of Input Parameters of Pulse Jamming
I.G. Garvanov, C.A. Kabakchiev, Bulgarian Academy of Sciences, BULGARIA ................................. 233

Influence of SNR on the estimated fractal dimension of radar signal
M. Piotrkowski, M. Nalecz, B. Swidzinska, Warsaw University of Technology, POLAND .................... 239

Data Extraction in High Resolution Surface Movement Radar for A-SMGCS
G. Galati, P. Magaro, M. Leonardi, A. Cavallin, Tor Vergata University and Vito Volterra Centre, ITALY ................................................................................................................................. 245

Sequential test with one lower threshold
S.E. Gavrilov, A.L. Morozov, V.I. Ralnikov, Saint Petersburg Electrotechnical University LETY, RUSSIA ................................................................................................................................. 251

CLUTTER

Cylindrical Array Use Possibility Analysis with Electronic Scanning Acceleration and Spatial Reduction of Clutter
A.D. Pluzhnikov, E.N. Pribudova, State Technical University of Nizhny Novgorod, RUSSIA ............. 257

The Doppler Weather Surveillance Radar (DWSR): Corrections of Distortions due Side Lobes in Precipitation
E. Saraiva, H. Tertuliano, C. Beneti, M. F. Souza, R. F. Stahlke, E. Kerherve, Centro Politecnico da UFPR, BRAZIL
P. Jarry, Bordeaux I University, FRANCE ............................................................................................... 263

Spatial Propagation Interference in High Range Resolution Radar Sea Clutter
R. Norland, IKT System Partner AS, NORWAY ....................................................................................... 269

Long Range Detection in X-Band Jammed Environment for Warship Targeting Purpose
M. Kukulka, Polish Navy Headquarters, POLAND .................................................................................. 275

The radiowave visibility map model development
E.V. Tarnavsky, G.P. Kulemin, Usikov Institute for Radiophysics and Electronics of NAS of Ukraine, UKRAINE ............................................................................................................. 281

TRACKING

Using The Hough Transform as A Track Initiator in A TBD System

Multidimensional Assignment Techniques based on Linear Programming and Non-Differentiable Optimisation
F. Opitz, EADS Deutschland GmbH, GERMANY .................................................................................. 297

Limited Memory Filters in Application to Tracking of Targets
A. Zankiewicz, Białystok Technical University, POLAND ................................................................... 303
Algorithm of Target Tracking for Three-dimensional Bistatic Forward Scattering Radar  
A.B. Blyakhman, Nizhny Novgorod Research Radiotechnical Institute, RUSSIA  
A.V. Mykinkov, A.G. Ryndyk, State Technical University of Nizhny Novgorod, RUSSIA  

**SIGNAL PROCESSING I**

**Time-Frequency Analysis in Application to Radar Signal Processing: A Survey**  
Yu. P. Grishin, Białystok Technical University, POLAND  

**A Variable Structure Augmented IMM Algorithm based on Unscented Transformations**  
F. Opitz, EADS Deutschland GmbH, GERMANY  

**Pre-Operational Evaluation of a Prototype A-SMGCS Using High Resolution Surface Movement Radar: Main Results and Lessons Learnt**  
G. Galati, M. Ferri, M. Leonardi, P. Magaro, “Tor Vergata” University and Vito Volterra Centre, ITALY  

**Hardware-in-the-loop Laboratory Experiments involving Phase Coded Radars**  
D.J. Bachmann, I. Antipov, A. Piotrowski, Defence Science and Technology Organisation, AUSTRALIA  
H. Rohling, Technische Universität Hamburg-Harburg, GERMANY  

**Polynomial Wigner-Ville Distribution in a radar signal recognition**  
E. Swiercz, Białystok Technical University, POLAND  

**MARITIME RADARS**

**Towards new IMO performance standards for ship borne radar equipment. Part I. Basic requirements**  
E. Vågslid, Norwegian Maritime Directorate, NORWAY  
R. Wawruch, A. Weinitr, Gdynia Maritime University, POLAND  

**Towards new IMO performance standards for ship borne radar equipment. Part II. Target tracking, display functions, cooperation with AIS and SENC, documentation and installation**  
E. Vågslid, Norwegian Maritime Directorate, NORWAY  
R. Wawruch, A. Weinitr, Gdynia Maritime University, POLAND  

**The Comparative Tests of the Quality of Information about Tracked Vessel Obtained with VTS Radar and AIS**  
R. Wawruch, J. Cydejko, Gdynia Maritime University, POLAND  

**Integration of RADAR, EGNOS/GALILEO, AIS and 3D ECDIS**  
A. Stateczny, Maritime University Szczecin, POLAND  

**SIGNAL PROCESSING II**

**Segmentation of radar images by 3-dimensional processing**  
W. Czamecki, A. Kawalec, J. Pietrasinski, Military University of Technology, POLAND  

**Quasi-Continues Waveform and Conjugate Filter Design to Use in One-Antenna Radar**  
S.P. Kalenichenko, Saint Petersburg Electrotechnical University "LETY", RUSSIA  

**Space-Time Data Processing with Breaks Based on the Parametric Models**  
V.M. Kutuzov, Saint Petersburg Electrotechnical University "LETY", RUSSIA  

**Additional signal compression by the matched filter**  
V. Latyshev, Moscow State Aviation Institute, RUSSIA  

**RADAR TECHNOLOGY II**

**Ultra-Wideband (UWB) Radar for Non-Contact Measuring of Person’s Respiration and Heart Activity**  
I.Y. Immoreev, S.V. Samkov, Moscow State Aviation Institute, RUSSIA  

--- 10 ---
Superficial Radar—Location of Hydrocarbonic Deposits
D. Gololobov, Byelorussian State University of Informatics and Radioengineering, Belarus
V. Janushkevich, S. Kalintsev, N. Tsivys, Polotsk State University, Belarus

Using Pulse Compression in Two Frequency MTI Radar
Y. Norouzi, H. Esfandyarpour, M. M. Nayebi, Sharif University of Technology, Iran

Turnrate Estimation in the Adrian Multi Radar Tracker in PHOENIX
André Adrian, Deutsche Flugsicherung GmbH, Germany

Signal analysis by the use of SAW dispersive delay lines
A. Kawalec, A. Pieniàczy, Military University of Technology, Poland

POSTER SESSION

Doppler Beam Sharpening Technique with Simple Velocity Estimation
A. Gorzelàńczyk, Telecommunication Research Institute, Poland
K. S. Kulpa, Warsaw University of Technology, Poland

Hardware Implementation of Real-time Range Compression Algorithm
B. Dawidowicz, A. Grome, P. Jobkiewicz, G. Pietrzyk, P. Samczyński, Warsaw University of Technology, Poland

Elimination of the Propagation Factor in Measurements of Point Targets above a Smooth Surface by Height and Frequency Variations
R. Norland, IKT System Partner AS, Norway

Analysis of distortion in SAR images generated by aircraft movement inaccuracy
M. Smolarczyk, Telecommunication Research Institute, Poland
K. S. Kulpa, Warsaw University of Technology, Poland

A Flexible Hardware Platform for Radar Signal Processing
J. Misiurewicz, Warsaw University of Technology, Poland
A. Gadoś, Telecommunications Research Institute, Poland
G. Wojdolowicz, Orpal Electronics, Poland

Frequency estimation algorithm based on DFT and FIR filters
E. Blok, Telecommunications Research Institute, Poland

Beam Characteristics of 3-D SAR in Curved or Random Path

Technologies of Detection and Imaging of Small Objects in Near-Bottom Layers
V. B. Mit’ko, State Organization “Secretariat of the Northern Forum”, Russia
M. V. Minina, Russian Academy of Natural Sciences, Russia

LIST OF AUTHORS
