The impact of air movement on the moisture accumulation in ventilated walls construction
Paula Wahlgren

Design of lightweight Super-insulated Outer Walls Considering Moisture Related Risks at the Outer Surface - Hani Hosein

Design of Weatherboard Flashing for Severe Climates - Tore Kjande, Kim Robert Liso and Emir Bergheim

Designing practical duct systems for a low life cycle cost - Dennis Johansson

Low energy ceiling heating cooling systems for buildings - Per Gundersen, Peter G. Schjold

Green roof effects on durability of roof membranes - Folke Bjork

Predicting the service life by Artificial Intelligence - Veronika Veras

Guidelines for wind, rain and wind-driven rain measurements at test-building sites - Bert Blocken, Jan Carmeliet

Intelligent Building Envelopes - Past or Future? - Gyslind Andehou

Soft Heating and Cooling in Most Ambient Conditions - Petra Karlstrom

Snow, ice and icicles on roofs - physics and risks - Anker Nielsen

Requirements of inverted roofs with a drainage layer - Lemmer, Hans-Peter Rodi, Carsten, Kunzel, M. Hartwig, Bednar, Thomas

Destructive Factors Causing Deterioration of Silicate Paints on Building Walls - Ruta Miniotaitė

Effect of admixtures, on the fresh and hardened properties of modern rendering systems - Carl-Magnus J. Capener

Using Measurements of Fungal Activity by Isothermal Microcalorimetry as a Base for Modelling Fungal Growth in Buildings - Yuqing Liu, Lars Wadso, Jonny Bjurman

Water vapour permeability and sorption isotherm of coated gypsum board - Staf Roels, Jan Carmeliet

Ventilated wooden claddings - A field investigation - Nore K., Thue J.V., Time B., Rognvik E

Analytical solution for moisture buffering effect - Validation exercises for simulation tools - Th. Bednar, C.-E. Hagenhof
Calculation of Moisture and Heat Transfer in Compact Roots and Comparison with Experimental Data: Mikkel Oustad, Arild Gustavsen, Sivert Uvsløkk

Dynamic Capillary Transport of Water in Porous Building Materials: Ole Søderstrom

Evaluation of Probabilistic Humidity Time Indicators: Anders Stoberg, PhD Liing

Finding the source of excessive water with isotopic measurements: Kjartan Gudmundsdottir

Full scale tests of moisture buffer capacity of wall materials: Lone Heldegaard Mortensen, Carsten Rode, Runt Peukurki

Glued concrete block vencers with open head joints: rain leakage and hygrothermal performance: Hugo Hens, Staff Roels, Wenda Desadelter

Hygric design and control of radiant floor cooling: W H van der Speel

Investigation of microclimate between wall and furniture with OHD: Lone Heldegaard Mortensen, Monika Wulfsen, Runt Peukurki, Carsten Rode

Moisture in compact roots: Results from a field survey in two stages: Knut Noreng, Berit Time, Kyndle, Tore, Sivert Uvsløkk

Moisture penetration in a chair seat as a response to RH variations in the indoor air: Kasa Steenbergs, Johan Claesson, Kurt Kielsgaard Hansen

Optimal Drying of Hooded Brickwork Masonry: John Grimewald, Rudolf Plagge

Biological organisms on building façades: Sanne Johansson, Yung Li, Lars Wadsø

Dampness in Buildings and Health: report from an ongoing epidemiological investigation in Sweden: Linda Hagerhed Engman, Carl-Gustaf Borsteg, DBHI study group

The buffering effect of heavy timber constructions on the indoor moisture dynamic: Stephane Hameury

A Method for Moisture Management in the Building Process: Kristina Mjörnell

A method to assess the effects of climate and material parameters on the moisture conditions of a wooden facade: Petra Lauter, Berit Time

Advantages and Risks Associated with Crawl Space Foundations: Stephen Burke

A Nanoscopic Look onto Cement Structures: Yang Tanhue, Bruno Keller, Eugen Magyari

An Approach to Loading Isotherms of Porous Materials Based on Regular Fractals: Zsolt Feleki, Eugen Magyari, Bruno Keller

Simplified hourly calculation of energy performance in accordance with the Energy Performance of Buildings Directive: Toke Rammer Nielsen, Svend Svendsen

Building Energy: A Practical Design Tool Meeting the Requirements of the EPBD: Gudrun Johannesson
The Climate Adapted Design of Buildings: An Easy Way for the Optimization. Bruno Keller, Tian Yuan, Fugen Magyari ................................. 794
Ventilation with heat recovery: H. Tommerup, S. Svendsen ......................................................... 801
A Classification of Climates with Respect to the Thermal Energy and Power Need.: Bruno Keller, Tian Yuan, Fugen Magyari ................................. 809
Adaptation to climate change in the construction industry. Local adaptation in the pre-fab housing industry: Cecilie Flyen Øyen, Siri Eriksen, Kim Robert Liso, Tore Kvande ........................................... 815
Multipoint RC-Networks with an application in thermally activated building component systems (TABS): Tim Weber .................................................. 823
Multipole Method to Compute Heat Losses from District Heating Pipes: Camilla Persson and Johan Claesson .................................................. 831
Released heat from a line source in a foundation construction: Peter Roots, Carl Erik Hagentoft .............. 839
Simplified calculation of hourly temperatures, heating demands and cooling demands in buildings with thermo active constructions: Niels Varming, Christian Mulholm, Toke Rammer Nielsen, Peter Weitzmann, Svend Svendsen .................................................. 845
Slab-on-grade foundation and edge wall element design-frost protection and simplified heat loss calculations: Per Gundersons .................................................. 853
Total heat loss coefficient of flat roof constructions with external insulation in tapered layers including the effect of thermal bridges.: Jorgen Rose, Svend Svendsen .................................................. 861
Temperature stability of traditional and low-cost modern housing in the Eastern Cape, South Africa.: Golden Makaka, Edson Meyer .................................................. 869
Increased Thermal Losses caused by Ventilation through Compact Pitched Roof Constructions - In Situ Measurements: C. Deseyve, Th. Bednar ......................... 881
Long-Term Thermal Performance Modelling and Simulations of a Borehole: Bojan Stojanovic, PhD student & Jan. Akander, PhD .................................................. 888
Modeling thermally active building components using space mapping: Frank Pedersen, Peter Weitzmann and Svend Svendsen .................................................. 896
Modelling of Long Wave Radiation Exchange in Enclosures with Building Integrated Heating: Henrik Karlsson and Carl-Eric Hagentoft .................................................. 904
Modelling of Thermally Activated Building Components With R-C Networks Incorporated Within Macro Elements: Dietrich Schmidt .................................................. 912
Vacuum Insulated Constructions in Detail: Univ.-Prof. Dr.-Ing. habil. Wolfgang M. Willems, Dr.-Ing. Kai Schild .................................................. 928
Vacuum Insulation Panels in Building Facades: Moisture and Temperature Conditions during Insolation: M.J. Tenpierik, J.J.M. Cauberg ................................. 937
Edge loss minimization in vacuum insulation panels: Thomas I. Thorsell, Ingemar Källerbrink ........................................ 945
Heat Gains influence on Balance Point Temperature and Thermal Comfort: Ferenc Kalmár .................. 953
The influence of a local heating system on the indoor climate of a large room: D. Limpens-Neilen, M.E.A. Schoffelen, H.L. Schellen .................. 961
Phthalates in indoor dust and their association with building characteristics, DBH-phase II.: Carl-Gustaf Bornehag, Linda Hägerhed Engman, DBH study group ........................................ 969
Measurements of microclimates in beds in relation to the climatic requirements of house dust mites: Kaisa. Svennberg and Lars Wadsö .................. 971
Breathing Window: Jon Kristinsson .................. 979
Improved Windows for Cold Climates: Jacob Birck Laustsen, Svend Svendsen ........................................ 987
Linear thermal transmittance of the assembly of the glazing and the frame in windows: Svend Svendsen, Jacob Birck Laustsen, Jesper Kragh .... 995
Numerical and Experimental Studies of the Effect of Various Glazing Spacers on the Window U-value and the Glazing Temperature: Arild Gustavsen, Sivert Usvlolk, Bjorn Petter Jelle ........................................ 1003
Calculation of daylight distribution and utilization in rooms with solar shadings and light redirecting devices: Tryggvi Nielsen, Toke Rammer Nielsen, Svend Svendsen ........................................ 1011
Energy-efficient windows - for how long: Agneta Olsson-Jonsson ........................................ 1019
Influence on the Heating Demand by Choice of Ventilation Strategy: Fredrik Ståhl .................. 1025
Mechanical ventilation with heat recovery in cold climates: Jesper Kragh, Jørgen Rose, Svend Svendsen ........................................ 1033
Quality assurance of indoor environment and energy use: Å. Wahlström, A. Ekstrand-Tobin ........................................ 1041
Reliability analysis in interior climate and building envelope design: Krystyna Pietrzyk .................. 1049
Subterranean archives - a case study: E. Møller, O. Valentin, L.D. Christoffersen ........................................ 1057
Technical measurement investigations of an office building characterised by low energy use and high thermal comfort: Gerd Hauser, Jan Kaiser, Dietrich Schmidt ........................................ 1065
Rain Penetration Resistance of Renders - Laboratory testing and numerical calculations: Time, B. Kvande T., Waldum, A.M., Oustad M ........................................ 1072
Response of insulation materials on non-isothermal moisture transport: Final results: Ruut Peuhkuri, Carsten Rode, Kurt Kielsgaard Hansen ........................................ 1080
Simulation of moisture and heat transfer in building components under atmospheric excitation: conservative modelling and numerical optimisation: Hans Janssen, Jan Carmeliet .......................... 1088
A Case Study Involving Tracer Tests by Mail to Confirm an Odor Transport Problem: James P. Rydock, Tormod Aurlien .......................... 1096
A simulation tool for temperature and moisture dependent transport of VOC's in buildings: Angela Sasic Kalgasidis, Henrik Karlsson, Carl-Eric Hagentoft ........................................ 1102
An Eco-factor method for assessment of building performance: Åsa Wahlström, Henrik Brohus .......................... 1110
Application of an integrated indoor climate & HVAC model for the indoor climate performance of a museum: AWM van Schijndel, HL Schellen .......................... 1118
Microbial growth on buildings facades with thin rendering on thermal insulation: Sanne Johansson, Lars Wadsö, Kenneth Sandin .......................... 1126
Contamination of a church ceiling due to the burning of candles in combination with floor heating: Henk L. Schellen, Marcel A.P. van Aarle .......................... 1134
Assessment of Building Retrofit Options Using Hygrothermal Analysis Tool: Phalguni Mukhopadhyaya, Kumar Kumaran, Mostafa Nofal, Fitsum Tariku, David van Reenen ........................................ 1139
Weather test reference year of Greenland: Jesper Kragh, Frank Pedersen, Svend Svendsen .......................... 1147
A PC-model to predict moisture buffering capacity in building materials according to a NordTest Method: Lars-Erik Harderup ........................................ 1155
Indoor humidity loads in Finnish detached houses: T. Kalamees, J. Kurnitski, J. Vinha .......................... 1163
Moisture Measurements in concrete: Hans Fredin and Håkan Skoog ........................................ 1171
Frost heave in Swedish slab on ground foundations: Peter Roots, Carl-Eric Hagentoft .......................... 1174
How do we implement building physics knowledge to the building sector: Jesper Arfvidsson, Carl-Eric Hagentoft, Ingemar Samuelson .......................... 1181
Why do moisture problems occur in the building sector - an interview study: Christian Wihlborg .......................... 1187
The Robustness of the Norwegian Building Stock - A Review of Process Induced Building Defects: Kim Robert Liso, Tore Kvande, Jan Vincent Thue .......................... 1195
Moisture problems in the design and construction phase: Anker Nielsen ........................................ 1203
List of contents ........................................ 1211
