RILEM International Symposium on Environment-Conscious Materials and Systems for Sustainable Development

College of Engineering, Nihon University, Koriyama, Japan

September 6-7, 2004

Edited by N. Kashino and Y. Ohama
Contents

Preface XV

Keynote Lectures

1. Materials planning for long lasting buildings - For the sustainable social development
   N. Kashino
   3

2. Contribution of concrete-polymer composites to sustainable construction materials and systems
   D. Van Gemert, A. Beeldens and E. Knapen
   19

3. Performance evaluation of self-cleaning effect for photocatalyst-applied exterior finishing materials through outdoor exposure test and laboratory test
   K. Motohashi, T. Inukai and T. Konishi
   27

4. Development of photocatalyst tile and commercial production
   M. Shimohigoshi and Y. Saeki
   35

Session One: Environmental Assessment

5. Environmental assessment of novel materials in infrastructures
   A. Katz
   43

6. Evaluation of environmental performance of concrete based on social cost
   Z. Li, Y. Yamamoto and T. Ohkubo
   51

7. Quantitative evaluation of synergistic effect of ultraviolet radiation and temperature in outdoor environment used of weathering reference materials
   Y. Takane, N. Kashino and Y. Watanabe
   59

Session Two: Recycling of Waste Materials and Components

8. Cementitious waste-free-type completely recyclable concrete
   M. Tamura, T. Noguchi and F. Tomosawa
   69

9. Developed integrated system with disassembling and recycling technologies - Part I. CO₂ emissions from intermediate treatment facilities
   79

10. Developed integrated system with disassembling and recycling technologies - Part II. Recycling building materials made from waste glass
    A. Koyama, S. Katou, C. Shibata, M. Maeda, T. Sugiyama and M. Kikuchi
    87
11. A new technique of activation of Cement Kiln Dust (CKD) – Fly ash systems  
V. K. Bui, M. S. Konsta-Gdoutos, J. Ryou and S. P. Shah

12. Characteristics and durability of environment-conscious concrete with a high volume of fly ashes  
G. Baert, A.-M. Poppe and N. De Belie

13. Recycling electric arc furnace dust as an addition to cementitious matrixes  
M. Castellote, E. Menéndez and C. Andrade

14. Basic study on recovery technique of unhydrated cement grains from waste fresh concrete  
R. Sakurada, K. Maruyama, M. Higuchi and Y. Kawazoe

15. Performance of recycled aggregate concrete  
M. C. Limbachiya, A. Koulouris, J. J. Roberts and A. N. Fried

16. A new concrete recycling process for coarse aggregate to be used concrete structure  
K. Yanagibashi, T. Yonezawa, T. Iwashimizu, D. Tsuji, M. Yamada and K. Arakawa

17. Effects of rubbing action in manufacturing process of recycled coarse aggregate from waste concrete on strength and durability of recycled concrete products  
Y. Hosokawa and M. Shoya

18. Feasibility study of lightweight aggregates using sewage sludge for nonstructural concrete  
K. J. Mun, N. W. Choi and Y. S. Soh

19. High quality recycled aggregate concrete (HIRAC) processed by decompression and rapid release  
Y. Kimura, K. Imamoto, M. Nagayama and H. Tamura

20. Deflections and cracks in recycled coarse aggregate concrete members processed by decompression and rapid release  
K. Imamoto, Y. Kimura, M. Nagayama and H. Tamura

21. Quality of recycled concrete made by a truck mixer  
T. Nawa, K. Tsuruya and H. Hashida

22. Air pollutant-removing paving blocks produced with recycled waste materials  
C.S. Poon and E. Cheung

23. Properties and applicability of structure of PVA-modified concrete  
S. Tamura, Y. Yamane, Y. Nakamura, H. Manabe and M. Yamada

24. Basic properties of underwater polymer mortars using waste expanded polystyrene-methyl methacrylate-based binders  
A. Moroka and Y. Ohama

25. Fundamental properties of MMA-modified soft up polymer mortar mixed with waste rubber powder  
K. S. Yeon, J. H. Jeong, T. J. Kweon, J. M. Beck and X. Q. Jin
### Session Three: Production of Sustainable Materials and Buildings

#### 27. A methodology for optimal design of sustainable buildings
S. Pushkar, R. Becker and A. Katz 227

#### 28. A study on the building reduction for rc multi-story housing system
M. Nagahori and N. Kashino 235

#### 29. Producing environment-conscious building materials from contaminated phosphogypsum
K. Kovler and M. Somin 241

#### 30. Survey of chemicals emission factors from building materials for interiors
H. Yoshida 251

#### 31. Demountable concrete structures with aluminium foam as joint material
H.W. Reinhardt and G. Weiss 261

#### 32. Resources circulation-oriented ecomaterials design and eco-life-cycle design of building structural composite materials, components, and/or systems – for establishment of sustainable eco-buildings and eco-cities
T. Fukushima 271

#### 33. High performance fibre reinforced cementitious composites: A sustainable building material for controlling water permeability
T. Nishiwaki, J.P. de B. Leite and H. Mihashi 279

#### 34. Fundamental study on porous concrete and applications for planting material
T. Matsukawa and M. Tamai 287

#### 35. Structural development of water permeable pavements
A. Beeldens and P.-P. Brichant 295

#### 36. Development of controlled short-life porous concrete
T. Horiguchi, K. Kikuchi, M. Obi and N. Saeki 303

#### 37. A study on biodiversity conservation in sea coastal areas using porous concrete
M. Yoshida and M. Tamai 313

#### 38. Porous polymer concrete using polyurethane resin and chipped aggregates made of wood wastes
H. Tokushige, M. Kawakami, Y. Kurimoto, H. Yamauchi and T. Sasaki 321

### Session Four: Applications of TiO₂ Photocatalysis

#### 39. Doped-TiO₂ / Cement matrices photoactive materials
C. Pepe, R. Amadelli, N. Pimpinelli and L. Cassar 331
40. Cementitious materials for self-cleaning and de-polluting facade surfaces

41. Development of photocatalytically active coatings for concrete substrates
F. Dehn, D. Bahnemann and B. Bilger

42. Experimental investigation of efficiency of TiO₂-Cement coating for self-cleaning and air purification
A. Beeldens and D. Van Gemert

43. NO₂ emission, local concentration and reduction by TiO₂-photocatalysis in airport area
H. Hamada, K. Komure, R. Takahashi and T. Yamaji

Session Five: Effective Applications of Natural Resources

44. Alternative landfill covers: Employment and eco-compatible materials
F. Colangelo, R. Pandolfo, R. Cioffi and S. Masi

45. Effects of molding conditions on basic properties of rice husks-waste expanded polystyrene composites by hot press molding method
Y. Ohama and I. Mori

46. Study on utilization of rice husk ash for high strength mortar
H. Tokushige, M. Kawakami and I. Wada

47. Recycling of waste wooden construction materials as components for wood-urethane resin composites
Y. Kurimoto, H. Yamauchi, T. Sasaki and H. Tokushige

48. Processing and utilization of wooden waste in civil engineering works
H. Yamauchi, T. Sasaki, Y. Kurimoto and Y. Iijima

49. Wooden port structures for the 21st century
M. Yamada

50. Properties of mixing-type wood-chip concrete using demolished timber
M. Kawamura and Y. Kasai

51. Polyester mortars with fine tailing as filler
N.W. Choi, S.J. Yoon, K.J. Mun and Y.S. Soh
