### Sintering I

- **The Influence of the Atmosphere and Impurities on the Sintering Behaviour of Aluminium**  
  Th. Schubert, T. Pieczonka, S. Baunack, B. Kieback ........................................... 3

- **Liquid-Phase Reactive Sintering of Al-Ti System**  
  G. N. Romanov, P. P. Tarasov, P. K. D'yachkovskiy, A. P. Savitskii, L. S. Martsunova .............................................................. 9

- **Asymmetry Effects in Ferrite-Austenite Transformation During Sintering of Carbon-Free Ferrous Alloys**  
  H. Danninger, C. Gierl, V. Vassileva .............................................................. 15

- **Structures of Former Particle Boundaries**  
  H. Kuroki, H. Y. Suzuki ........................................................ 21

- **Fabrication of TiAl Thin Rod by Means of Traveling Zone Sintering Method**  
  S. Tada, H. Hashimoto, Z. M. Sun .............................................................. 27

- **Kinetics of Centrifugal Induction Sintering up the Powder Coatings on Heating of the Internal Surface of the Part with the RFC Inductor**  
  N.N. Dorozhkin, I.A. Sosnovskij, L.J. Vizner .................................................. 33

### PM Low Alloy Steels I

- **Effect of Manganese on Properties of Sintered Fe-(1.5, 0.85)Mo-0.5C Steel**  
  M. Selecka, V. Simkulet, R. Keresti, L. Parilak ............................................... 41

- **Wear Phenomena, Microstructure and Mechanical Properties of Cr-Mo-[Mn]-[Cu] Sintered Steels**  
  E.Dudrová, M.Actis Grande, M.Kabátová, M.Kupková, M.Rosso, R.Bidulský ................ 47

- **Effect of Phosphorus Addition on Microstructure and Impact Behavior of Cr-Mo Low Alloved Steels**  
  V.Vassileva, H.Danninger, D.Krecar, H.Hutter ............................................... 53

- **Effect of Temperature on the Sintering Behaviour of a Diffusion Bonded Low Alloved Steel**  
  C. Menapace, A. De Nicolo, F.Volpin, A. Molinari ............................................ 59

- **Properties of Sintered Manganese Steels Compacted from Sponge and Water Atomised Ferrous Powders**  
  A. Cias, M. Sulowski ............................................................... 67

- **Chromium and Manganese Low Alloved Sintered Structural Steels Obtained from Powder Mixtures**  
  R. L. Orban, L. Brandusan, M. Orban .......................................................... 73

- **Comparative Characterisation of P/M Steels Obtained From Nominally Equivalent Powders**  
  G. F. Bocchini, M. G. Ienco, M. R. Pinasco, R. Gerosa, B. Rivolta, G. Silva ............ 79
Influence of Sintering Conditions on Properties of P/M Steels Based on Cr-Prealloyed Powders
G. F. Bocchini, A. Parodi, M. R. Pinasco, B. Rivolta, A. Silvestri, E. Stagno ........................................... .85

Sintering II

Spark Plasma Sintering of Intermetallics and Metal Matrix Composites
J. Schmidt, T. Weissgaerber, T. Schubert, B. Kieback ................................................................. .93

Simulation of Temperature Evolution During Field Assisted Sintering of Rapidly Solidified Al-Alloy Powder

Ni-Aluminide Coatings on Titanium by Microwave Assisted Reactive Sintering
A. Casagrande, G. P. Cammarota, C. Leonelli, G. Poli, P. Veronesi ............................................. 107

BEPM Synthesis of Ti-6Al-4V Alloy Using Hydrogenated Titanium
O. M. Ivasishin, D. G. Savvakin, I. S. Bielov, V. S. Moxson, V. A. Duz, R. Davies, C. Lavender .............. 115

The Temperature Control Over Electrodischarge Sintering of Powders of High-Melting Metals with the Help of a Photoemission Pyrometer
K. J. Beljavin, K. N. Kasparov, D. V. Minko, O. O. Kuznechik ................................................... 121

The Effect of the Preparing Methods of Ni+Al Powder Blends on Reaction Sintering Features and Properties of NiAl Compacts

Investigation of Composition, Structure and Morphology of Composite Powders Based on Refractory Compounds Produced under Low-Temperature Plasma
N. Rudenskaya, U. Huletski, Y. Aliakseyeu .................................................................................. 135

PM Low Alloy Steels II

Cr-Mn-Mo-Alloyed High Performance Steel via Kerosene Atomised Master Alloy
P. Beiss, R. Wassenberg ........................................................................................................ 143

Static and Fatigue Properties of High Strength PM-Steels
L. S. Sigl, P. Delarbre, K. Lipp, C. M. Sonsino ........................................................................... 151

Chromium Pre-Alloyed PM Steel for High Structural Performance
A. Bergmark, J. Andersson, S. Bengtsson .................................................................................. 157

High Density Processing of Cr-Si-Ni-Mo Containing Steels
P. King, B. Lindsley, M. Marucci, K. Narasimhan .......................................................................... 163

Comparison of Properties of Prealloyed with Admixed Extra Fine Nickel Steels
T. F. Stephenson, M. Korotkin .................................................................................................. 169

Effect of Different Heat Treatments on Microstructure of Ni Added Steels Produced By P/M Method
A. Gural, S. Tekeli, M. Gurü ....................................................................................................... 175

PM Tool Steels

Surface Processing of the PM Vanadis 6 Steel with Plasma Nitriding and CrN PVD - Coating
P. Jurci, P. Panjan ..................................................................................................................... 183

Room Temperature Elastic Properties of PM Tool Steels
P. Beiss, B. S. P. Subramanian, J. Jain, J. Steiner ....................................................................... 189
K890 MICROCLEAN - A New, Powder Metallurgy Cold Work Tool Steel Combining Wear Resistance and Highest Ductility
H. Makovec, I. Schemmel ................................................. .197

Properties of Powder Metallurgical and Spray Formed Tool Steels and Experiences in Powder Pressing Applications
O. Sandberg, L. Jönson .................................................. 203

N18 CAGG - An Innovative New PM Material For Precision Hot Forging Dies
M. Pierronnet, J-Y. Moraux, G. Raisson ................................ 209

Mechanical and Wear Behaviour of Tic-Base Cermets Sintered by Different Techniques
H. Klaasen, L. Kollo, J. Kübarsepp .................................... 217

Effect of Chromium on High Temperature Oxidation of Tic-Based Cermets
V.V. Lazaryuk, L.G. Bodrova, V.P. Bodrov ............................ 223

High-Effective Porous Abrasive Material
L. Pilinevich, A. Taraykovich, M. Tumilovich, G. Sheko ............. 229

Special Pressing Die for PM Bicomponent Parts
St. Radu, M. Didu, M. Mangra, I. Ciupitu .............................. 235

Increasing Sintered Tools Performances in Stone Cutting by Air Cold Plasma Treatment of the Diamonds
S. Turchetta, L. Carrino, L. Sorrentino ................................ 239

Low Alloy Steels III

Effect of Cooling Rates on the Properties of Ni-Mo and Ni-Mo-W Sintered Steels

An Approach to Austempering for High Performance High Density PM Steels
L. Blanco, M. Campos, J.M. Torralba .................................. 255

Ni-Cu-Mo Interactions in Sinter-Hardening Steels
T. Singh, T. F. Stephenson ................................................ 261

Development of High Strength Sinter-hardening Steel
T. Tsutsui, K. Ishii, S. Satoh, J. Kamimura ............................ 269

Sinter Hardening Response Of A Cr-Si-Ni-Mo Containing Steel
B. Lindsley, W. B. James ................................................. 275

Obtaining and Mechanical Characteristics of Multiphase Low Alloyed Steels
S. Domsa, C. Matyas, A. Ilisiu ........................................... 281

Influence of Hard Inclusions on Mechanical Properties of Materials on the Base Sintered Steels
M. A. Shypitsa, A. A. Dmitrovitch .................................... 285

Hard Materials & Diamond Tools

Investigation of the WC - Grain Size Influence in Hardmetal Systems by a New Method for Wear Measurement
D. Vladimir, P. Zbynzk, M. Miroslav .................................. 293

Comparative Study of Self-Mated HVOF-Sprayed Hardmetal Coatings Under High Temperature Dry Sliding Conditions
L-M. Berger, S. Saaro, M. Woydt ........................................ 295

Diamond Impregnated Composites - Damage Mechanisms of Diamond and their Prevention
Wear and Cutting Properties of New Diamond Inserts Based on Iron and Copper Powders
C. Menapace, P. Costa, A. Molinari ................................................................. 311

On the Dissolution of WC in WC-Co Alloys
O. Seo, S. Kang ................................................................................................. 317

Fatigue Performance of Carbide Composites
H. Klaasen, J. Kübarsepp, I. Preis, F. Sergejev .................................................. 323

Wear of Coated Hardmetals in Machining Cast Iron
V. Richter ........................................................................................................... 329

Murakami Approach: Fatigue Strength Prediction of Cemented Carbides by
Considering Pores to be Equivalent to Small Defects
F. Sergejev, I. Preis, H. Klaasen, J. Kübarsepp ..................................................... 335

Influence of Modification of Cu-Sn Binding Material of Diamond Tool on
Its Physical and Mechanical Properties
E. Zvonarev, A. Baran ........................................................................................ 341

PM Low Alloy Steels IV

Liquid Phase Sintering of PM Steels Through Boron-Containing Master Alloy Additions
M. Sarasola, S. Sainz, F. Castro ........................................................................ 349

Effect of Quenching and Tempering on the Fatigue Behaviour of Fe-1.5Mo-4Ni-2Cu-0.5C
R. B. Wassenberg, P. Beiss ............................................................................... 357

Fracture Toughness-Strength Relationship for High Density PM Steels
J. Bris, F. Benítez, A. Mateo, J.A. Calero, L. Llanes ............................................. 363

Alloying and Sintering Behaviour of Selected Iron-Graphite-Master Alloy Powder Mixtures
F. Castro, M. Sarasola, F. Baumgaertner, M. Dougan, S. Mitchell, K. Lipp,
H.J. Bender, C. Coffin, J. Dunkley .................................................................... 371

Internal Damping Characterization of Sintered Advanced Materials
A. De Iorio, F. Penta, P. Pinto, G.P. Pucillo ....................................................... 379

PM Stainless Steels

High Performance Materials Based on Stainless Steel with Elevated Wear
and Oxidation Resistance
J. A. Calero, M. J. Dougan ................................................................................ 389

Influence of Alloying Elements on the Heat Resistance of Sintered Stainless-Steels Elements
M. Baccalaro, A. Mattern, I. Hauer, M. Pohl, G. Schneider, A. Flaig ................. 395

Sintered Austenitic Stainless Steels With Manganese Mechanically Alloyed
A. Canal, M. Campos, F. Condes, J. M. Torralba ............................................... 401

Improvement in Mechanical Properties and Corrosion Resistance on Ferritic
Stainless Steel Sintered under Nitrogen/Hydrogen Atmosphere
C. Garcia, P. Tiedra, Y. Blanco, J.M. Ruiz, F. Martin ........................................ 407

Determination of the Fracture Toughness of Soft Magnetic Composites by the
Single-Edge-V-Notched-Beam Method
S. Giménez, S. Herter, R. Kott, O. Van der Biest .............................................. 413

Effects of Silicon Addition on the Microstructure and Mechanical Properties
of 316L Austenitic Stainless Steel
K. Sikorski, A. Szymanska, D. Kowalczyk, J. Kazior, K. J. Kurzydlowski ......... 419
PM Functional Materials

100-μm-Thick Sintered Magnets for MEMS-Type Applications
P. McGuiness, D. Jezeršek, S. Kobe, B. Saje ................................................................. 427

Sol-Gel Silane Dielectric Coatings. A Model System for Thermally Stable
Dielectromagnetic SMC's
S. N. B. Hodgson, Y. X. Pang, B. Weglinski, D. Gaworska, J. Koniarek ............................... 433

Properties Of Hybrid Dm-Dh Magnetic Cores For Step Motors
A. Buniewski, L. Długiewicz, B. Weglinski ............................................................... 439

Soft Magnetic Powders From Fe-Ni and Fe-Ni-X Systems Produced by Mechanical
Alloying Techniques
I. Chicinas, O. Isnard, V. Pop .................................................................................. 445

The Application of Magnetovibrating Layer to the Milling of Ferromagnetic Materials
Yu M. Vernigorov, I. N. Egorov, S. I. Egorova ................................................................ 451

Thermally Conducting Porous Materials for Cooling of Electronic Components
M. Lucaci, M. Lungu, S. Gavrilu, E. Enescu, R. L. Orban .................................................. 457

Technological Transformations in the Manufacturing of some WNiCu Pseudoalloys
C. I. Pascu, M. L. Bogdan ...................................................................................... 463

Influence of High Energy Mechanical Grinding in Olivine-LiCoPO4
M. E. Rabanal, M. E. Arroyo y de Dompablo, M. C. Gutierrez, A. Khalifa,
F. Garcia Alvarado, J. M. Torralba ........................................................................... 469

Oxidation of Sintered Nd-Fe-B Magnets with Modified Composition
I. Skulj, I. R. Harris, H. E. Evans .............................................................................. 475

Layered Nd-Fe-B Dielectromagnets
B. Slusarek, L. Długiewicz, P. Gawrys, M. Przybylski ..................................................... 481

Nanocomposite SmCo5/a-Fe Type Magnets Prepared By Mechanical Milling
V. Pop, O. Isnard, I. Chicinas, D. Givord ...................................................................... 487

Phase Composition, Crystal Structure, Magnetic Properties of the Nanodimensional
and Nanocrystal Nd-Fe-B Powders and Based on Their Magnetoplasts
G. I. Makovetski, E. V. Zvonarev, V. M. Olefirenko, K. I. Yanushkevich, E. N. Shyngarev 495

PM Applications

Surface Densified P/M Gears Made of Chromium Alloy Powder Reach Automotive Quality
S. Dizdar, L. Fordén, D. Andersson ............................................................................. 503

Surface Densified P/M Steel - Comparison with Wrought Steel Grades
F. Hanejko, A. Rawlings, K. S. V. Narasimhan .............................................................. 509

Evaluation of Mechanical and Biological Properties of Highly Porous Titanium Parts
M. Bram, H. Schiefer, D. Bogdanski, M. Köller, H. P. Buchkremer, D. Stöver .................. 517

An Investigation into the Porosity and Compressive Strength of Calcium Based
Materials Produced by the Die Compaction Technique
T. Akter, J. Stokes, M. Ardhaoui, M. S. J. Hashmi ........................................................ 523

Applications of the Sintered Nd-Fe-B Permanent Magnets on the Special Magnetic
Circuits, "Magic Cylinder" Type

Powder Metallurgy Technology in Production of Medical Implants. Why?
V. Savich ..................................................................................................................... 537
Investigation into Structure and Contact Properties of Tungsten-Silver-Rhenium Contact Materials
K. Wojtasik, M. Woch
