CONTENTS
VOLUME II

T22—Wood Fiber Processing

Processing Highly Filled Pre-Compounded Pellets on Single Screw Extruders ........................................... 1
E. Steward, American Kuhne, Inc.

A Comparison of Process Configurations for Compounding Woodfiber-Plastic Composites ......................... 5
S. Kapp, Leistritz

Critical Issues in Extrusion Foaming of Plastic/Woodfiber Composites .................................................. 13
G. M. Rizvi, University of Ontario Institute of Technology
G. Guo, Y.S. Kim, C.B. Park, University of Toronto

Compounding Wood-Polymer Composites with In-Line Drying Technology ........................................... 20
R. Cutillo, S. Jackson, Coperion Corporation

Investigating Flow Behavior of Wood-Plastic Composites ................................................................. 25
A. Yacykewych, C.W. Brandender Instruments, Inc.

INJECTION MOLDING - 23

M5—Assist

Application of the Similarity Theory For Special Injection Molding Processes ........................................... 30
E. Kaiser, H. Potente, H. Ridder, M. Schäfers, University of Paderborn

Three-Dimensional Simulation of Gas-Assisted Injection Molding ......................................................... 35
F. Costa, P. Kennedy, S. Ray, Moldflow Pty. Ltd

Effects of Vibrating Injection on Structure and Property of Polymer Produce ........................................... 40
X. Chao, Z. Fengling, Z. Nanqiao, P. Xiangfang, L. Yiquan, South China University of Technology

The Optimal Parameters of the Water Assisted Injection Molding Process with ABS Material .................... 44
C. Chen, K. Liang, C. Yeh, Ching Yun University

Optimization of Parts with RIB using Gas Assisted Injection Molding Technique ........................................ 49
B. Dong, Q. Li, C. Shen, National Engineering and Research Center for Advanced Polymer Processing Technology, Zhengzhou University

A New and Flexible Process for Thermoplastic Foams ................................................................................. 54
S. Habibi-Naini, C. Schlummer, Sulzer Chemtech Ltd.

T3—CAD Simulation 1

Prediction of Heat Treatment Effects on Injection Mouldings ..................................................................... 59
M. Kamal, T. Saini, McGill University

Numerical Simulation of the Breakthrough Phenomenon in Co-Injection Molding ........................................ 64
J. Hétu, F. Ilinca, National Research Council of Canada

Two Solutions for Three-Dimensional Flow Simulation of Injection Molding ............................................. 69
W. Cao, C. Shen, Mold & Die Institution, Zhengzhou University

3D Simulation and Verification for Mold Temperature Control Technologies .............................................. 74
S. Chen, S. Huang, Z. Jiang, Chung Yuan University
H. Li, C. Shen, Zhengzhou University

Seamless Integration of Injection Molding and Structure Analysis Tools ..................................................... 79
D. Hsu, A. Peng, W. Yang, CoreTech System Co., Ltd.
R. Chang, National Tsing Hua University

In-Process Monitoring and 3D Dimensional Assessment of Micromouldings .............................................. 83
P. Coates, K. Howell, M. Martyn, R. Spares, B. Whiteside, University of Bradford
W4—CAD Simulation 2

Anisotropic Shrinkage in Injection Moldings of Semicrystalline Polymers: Simulation and Experiment ................................. 88
A. Isayev, K. Kim, K. Kwon, C. van Sweden, The University of Akron

Corner Effect in Warpage Simulation ................................................................................................................................. 93
X. Jin, Moldflow Corporation
A. Bakharev, F. Costa, Z. Fan, P. Kennedy, R. Zheng, Moldflow Pty. Ltd

Fast Simulation Methodology and its Application in Injection Molding ................................................................. 98
S. Changyu, L. Qian, Y. Xiaorong, National Engineering and Research Center for Advanced Polymer Processing Technology, Zhengzhou University

Three-Dimensional Mold Cooling Analysis for Injection Molding Process .................................................. 103
K. Choi, B. Koo, VMTech

Prediction of Flow Imbalance in Geometrically Balanced Feed Systems ........................................................ 108
P. Cook, F. Costa, C. Kietzmann, H. Yu, Moldflow Pty. Ltd

Flow Dynamics in Injection Molding with Microfeatures ................................................................. 113
D. Kim, Soonchunhyang University
K. Koelling, J. Lee, G. Xu, The Ohio State University

W20—CAD Simulation 4

Validation of On-Line Molding Process Simulation ................................................................................................................. 116
B. Fan, Delphi Automotive
S. Johnston, D. Kazmer, V. Kudchadkar, R. Mukhari, University of Massachusetts Lowell

Injection Molded Part Split Solved By CAE Simulation Software ........................................................................................................ 121
S. Ni, Lexmark International Inc.

Domain Decomposition for 3D Flow Simulation of Injection Molding ........................................................................ 126
W. Cao, C. Shen, Mold & Die Institution, Zhengzhou University

Drop Test of Mouse Housing – Simulation and Experimental Verification .......................................................... 131
H. Wang, Chinese Air Force Academy
S. Chen, L. Huang, T. Wu, Chung Yuan University

Micro Injection Molding of Micro Fluidic Platform ........................................................................... 136

Optical Simulation of a Plastic Lens Reflecting Injection Molding Effects .................................................. 141
W. Joo, K. Park, Seoul Nat'l Univ. of Technology

M4—CAD Simulation, WARP

Three-Dimensional Cooling and Warpage Simulation for the Injection Over-Molding Process ........................ 146
F. Costa, Z. Fan, P. Kennedy, C. Kietzmann, S. Ray, Moldflow Pty. Ltd

Warpage Comparison Between Microcellular and Conventional Injection Molding ............................................................ 151

Validation of a Self-Regulating Melt Pressure Valve ........................................................................................................ 156
D. Kazmer, V. Kudchadkar, R. Nageri, University of Massachusetts Lowell

Numerical Simulation of Deformations for Injection Molded Parts ............................................................................. 161
H. Ching-Hsin, C. Shia-Chung, Chung Yuan University
S. Chang-Yu, L. Hai-Mei, S. Li, Zhengzhou University

Variable Mold Temperature on the Part Qualities of Injection Molded Parts ..................................................... 166
Y. P. Chang, S. C. Chen, W. R. Jong, Chung Yuan University

Constancy of Properties Resulting from Foam Injection-Molding Techniques .................................................. 171
G. Ehrenstein, N. Müller, University of Erlangen-Nuremberg

M8—General

Effect of Process Parameters on Viscoelastic Properties and Hoop Stress in Micro Injection Molded Parts ... 176
A. Asthana, C. Barry, B. Ghuman, R. Karania, S. Patel, University of Massachusetts Lowell

Rheometric Properties Based Model for an Improved Solid Contents CIM Feedstock ............................................................. 181
A. Correia, H. Jorge, CTCV-Technological Center for Ceramics and Glass Industry
A. Cunha, University of Minho
The Systemic Analysis of Metal Injection Moulding ................................................................. 186
B. Berginc, Z. Kampuš, University of Ljubljana, Faculty of Mechanical Engineering
I. Čatč, University of Zagreb, Faculty of Mechanical Engineering and Naval Architecture
CAE Prediction of Ink Wash-out on Phone Keypad for In-Mold Decoration ................................. 191
W.J. Wang, ChE, Far East College
P. Hsu, Y. Wang, Far East College
S. Hwang, M.E. Ching Yun University
S. Chen, L.H. Chiu, M.E., Chung Yuan Christian University
H. Chen, J. Ha, M.E., Far East College
New Technologies for Achieving Lean and Six Sigma Goals ......................................................... 195
S. Tuszynski, Algoryx, Inc
Polymer Degradation and Filling Incompletion Monitoring for Micromolding using Ultrasound ...... 200
C. Jen, Y. Ono, National Research Council of Canada
E. Brown, P. Coates, B. Whiteside, University of Bradford

INT2—Interactive Session 2 - Injection Molding

Numerical and Photoelastic Research on Residual Stress/Warpage of PC Plank..................................... 205
H. Ching-Hsin, C. Shia-Chung, L. Yu-Wan, Chung Yuan University
L. Hai-Mei, C. Wei, Zhengzhou University
Preform Node Optimization for Injection Molding Warpage Analysis ............................................. 210
S. Chang-Yu, S. Gang, L. Hai-Mei, S. Li, Y. Xiao-Rong, L. Yong-Zhi, Zhengzhou University
Application of CAE Technique in Process Optimization and Part Quality Control of Injection Molding.... 215
J. Chen, Q. Li, C. Shen, L. Wang, National Engineering and Research Center for Advanced Polymer Processing
Technology, Zhengzhou University
An Investigation Into Hesitation Effects in Oscillating Flows.......................................................... 220
K. Garnavish, D. Kazmer, R. Mukhari, University of Massachusetts Lowell
Design and Performance Analysis of a Self-Regulating Melt Pressure Valve .................................... 225
D. Kazmer, M. Munavalli, University of Massachusetts Lowell
Study on the Rheological Behavior of Polymer Melt For Micro Molding .......................................... 230
S. C. Chen, T. K. Lin, R. I. Tsai, Chung Yuan University
R. D. Chien, Nan Ya Institute of Technology
Study on the Weld Line Strength of Injection Molded Nylon6 Nanocomposites .................................. 235
P. Su, Chung Chou Institute of Technology
S. Chen, J. Yeh, Chung Yuan University

INT5—Interactive Session 5 - Injection Molding II

An Approach to Gradation Mesh Generation in Injection Molding Simulation ..................................... 240
Study on the Thermoforming of PC Films Used for In Mold Decoration ........................................... 245
S. C. Chen, H. S. Peng, Chung Yuan University
D. K. Huang, S. Lee, Ming Hsin University of Science and Technology
Visual Computer-based Simulation of the Penetration Length of the Core Melt in Sandwich Injection .... 250
Z. Jue, X. Qian, Zhejiang University of Technology
Evaluation of Material Properties and Processability Using the Intelligent Micro Polymer Processing
System .............................................................................................................................................. 255
Y. Yamagiwa, Nissei Plastic Industrial Co., Ltd.
H. Ito, T. Kikutani, T. Saito, T. Yasuhara, Tokyo Institute of Technology
K. Muroi, Toyo Seiki Seisaku-sho, Ltd.
Hot Embossing of Micro-Featured Devices ....................................................................................... 260
S. C. Chen, M. J. Lin, Chung Yuan University
R. D. Chien, W. L. Liaw, Nan Ya Institute of Technology
Magnetic Rotor Encapsulation ............................................................................................................ 265
W. Childers, J. Sayre, Battelle Memorial Institute
INT5—Interactive Session 5 - Injection Molding III

Study on Mechanical Properties of ABS Parts in Microcellular Injection Molding Process ........................................... 270
S. Chen, C. Lin, H. Liou, C. Tian, Ching Yun University

INT8—Interactive Session 8 - Injection Molding II

Effects of Process Conditions on Shrinkage of the Injection-Molded Part ................................................................. 275
J. Chen, Q. Li, C. Shen, L. Wang, National Engineering and Research Center for Advanced Polymer Processing Technology, Zhengzhou University
Effects of Molding Conditions on the Electromagnetic Interference Performance of Injection Molded ABS Parts with Conduct ............................................................. 280
S. C. Chen, J. S. Huang, P. H. Lee, Chung Yuan University
S. C. Lee, Ming Hsin University of Science and Technology
R. D. Chien, Nan Ya Institute of Technology

INT8—Interactive Session 8 - Injection Molding III

Cavity Temperature Control in Injection Molding Machine ................................................................. 285
R. Dubay, M. Hernandez, B. Pramujati, University of New Brunswick
Study on Response Characteristics in High Speed Injection Hydraulic System ................................................................. 290
S. C. Chen, J. S. Huang, Y. Kang, H. H. Tseng, Chung Yuan University
Experimental Study of the Cavity Pressure During the Vibration-Assisted MIM ................................................................. 295
J. Gang, H. Hezhi, J. Qu, Y. Xiaochun, National Engineering Research Center of Novel Equipment for Polymer Processing, South China University of Technology
Geometry Influence in Cavity Pressure Curves Registration ................................................................. 300
M. Candal, R. Morales, Y. Rondon, Universidad Simón Bolívar
Injection Speed Control in Plastic Injection Molding ................................................................. 305
R. Dubay, J. Han, B. Pramujati, University of New Brunswick
New Approach to Noise Reduction in Plastic Gears ................................................................. 310
N. Gandhi, ABA-PGT Inc

M6—Material 1

The Effect of Recycle History and Processing Temperature on the Weld Line Strength of a Polypropylene Homopolymer ................................................................. 313
R. Simas, Smiths Medical
R. Malloy, U-Mass Lowell Plastics Engineering Dept.
Thermal and Rheological Characterization of Feedstocks for Powder Injection Molding ................................................................. 318
J. Adames, A. Leonov, The University of Akron
Interfacial Effects in Replication of Nano-Scale Features ................................................................. 323
C. Barry, J. Lee, J. Mead, C. Sriojojinyo, S. Yoon, Nanomanufacturing Center, University of Massachusetts Lowell
Biobased Polyactide (PLA) Nanocomposites ................................................................. 328
L. Turng, University of Wisconsin-Madison
Geometry dependent flow properties of Long Glass Fiber Reinforced Polypropylene ................................................................. 333
P. Farrington, R. Speight, Moldflow Pty. Ltd
Study on the Mechanical Properties of Injection Molded Nylon 6 Nanocomposites ................................................................. 338
Y. Wang, I.E., Far East College
H. Chen, S. Chen, M.E., Chung Yuan Christian University
P. Hsu, M.E., Far East College

W19—Material 2

Study on the Mechanical Properties of Microcellular Injection Molded Parts ................................................................. 343
S. Hwang, Ching-Yun University
S. Chen, M. Chung, Chung Yuan University
Molding of PC/ABS Parts for Chrome Electroplating ................................................................. 348
Model Based 100% Quality Documentation System Suitable for Small Lot Sizes in Injection Molding

Evaluation of Adjacent Flow Weldline in PC/ABS

Shear Induced Morphology Prediction in Injection Moulded Semi Crystalline Thermoplastics

An Examination into the Effects of a Fluoropolymer Additive in Nylon 6/6 Neat Injection Molding Resins

Manipulation of Fiber Orientation by Shear Rotation in Injection Molding

Adaptive GPC Control of Barrel Temperatures in Injection Molding

Ultrasonic Technique and Probes for Monitoring Surface Imperfection of Microfluidic Devices during Injection Molding

Part Weight Prediction using Capacitive Transducer in Injection Molding

A Study of Micro Injection Molding Optical Fiber Ferrules

Effect of Ultrasonic Energy on Polymer Amalgamation

Effect of Ultrasonic Energy on Polymer Amalgamation
