10th International Conference on Piling and Deep Foundations

31st May – 2nd June 2006 – NH Grand Krasnopolsky Hotel, Amsterdam
Contents

The Mayor of Amsterdam – Job Cohen

The John Mitchell Lecture

Ground movements – A hidden source of loading on deep foundations
HG Poulos................................................................. 2

General Reports:

Session 1

Deep excavations “He who pays the piper calls the tune”
T Chapman................................................................. 24

Session 2a

Present developments in the design of deep foundations
R Katzenbach; G Bachmann, C Gutberlet, H Ramm................................. 32

Session 2b

Recent evolutions in deep foundation technologies
Maurice Bottiau........................................................... 46

Session 6

Pile monitoring, testing, and data processing: New developments and remaining issues
AE Holeyman............................................................ 86

Session 1 Deep excavations

Construction of a deep basement on a sloping site in Glasgow: The Aurora project
H Boghosian, Z Cabarkapa, B Ferreira, M Pedley, HD St John....................... 104

Diaphragm walls and barrettes for top-down construction: A project report
B Böhle, W-R Linder...................................................... 112

Underground parking facilities in Rotterdam
HE Brassinga, G Hannink................................................ 120

Non-linear evaluation of pile groups lateral deflection
F Castelli................................................................. 127

Deep excavation retaining systems in unsaturated soils
TB Hamid, EF Tawfik.................................................... 135

Effect of transverse stresses on the strength of steel sheet piling and recommended changes in design procedure
RJ Hartman............................................................. 144

Secant CFA-pile walls – A risk management view
M Korff, AF van Tol.................................................... 154

Research advances in barrettes: Installation effects and load-carrying behaviour
GH Lei

Behaviour of model pile group under axial monotonic loading
A Le Kouby, J Canou, JC Dupla

Effect of slope on P-Y curves; under passive loading
K Muthukumaran, R Sundaravadivelu

Optimized neural network model for the prediction of driven pile's resistance
HI Park, JW Sook, D Hwang, C-W Cho

Axial capacity of drilled shafts in soft shale
K Ravishankar

Capacity of driven piles in sand
M Sabry and A Hanna

Prediction of ultimate pile bearing capacity using artificial neural networks
V Tajdar, N Shariatmadari, A Eslami

The contest on the prediction of capacity of a bored pile constructed under polymer-based slurry in Bangkok subsoil
N Thasnanipan, ZZ. Aye, T Boonyarak, M Arayasiri, C Intraratchaiyakit

Stress and deformation of pile foundation of Sutong Bridge
Y Zongze, Z Jungao, Y Xiangjuan, W Junjie, W Shouchang, F Lingyun

Session 2b Foundation techniques: Current practice and new technology

Ground improvement by means of stabilising columns
G Breitsprecher, D Stihl

Application of CFA piles for foundation of a shopping centre on long-standing dumping ground
J Bzówka, J Pieczyrak

Experiences with base grouted drilled shafts in the Southeastern United States
SD Dapp, M Muchard, DA Brown

Drilled piers support massive gantry crane
JR Davie, JLM Clemente, MR Anderson, LC Headland

Press-in piling technology for sustainable construction
P Dubbeling, A Vriend, T Nozaki

Recent advances in quiet & vibration-less steel pile installation and extraction
RK Filip

Confinement of two contaminated sites in a petrochemical plant; case history
R Granata, C Crippa

Experience gained at the application of Atlas piles in Poland
K Gwizdała, A Krasiniski, T Brzozowski

Prediction of jet grout column diameter in cohesive soil
CE Ho

Performance of bituminous coats in reducing negative skin friction
MG Khare, SR Gandhi
Bored piles with base preloading by grouting – the Polish experience  
BAKtosihski, C Szymankiewicz  
484

Bacteria help civil engineers; report of a pilot project  
JWM Lambert, VS Whiffin, PA Wolfs  
490

Continuous grouting in embedding of sheet piles  
JL Lehtonen, JP Leaksonen  
495

Piling projects constructed with vinyl polymer support fluid in Glasgow, Scotland  
DJ Lennon, D Ritchie, GO Parry, TP Suckling  
499

Application of PCC piles on soft ground improvement of expressways  
HLiu, Y Gao, T Zhang  
507

Behavior of PCC pile under lateral load  
Z Ma, H Liu, KFei, T Zhang  
513

CSM: An innovative solution for mixed-in-situ retaining walls, cut-off walls and soil improvement  
F Mathieu, S Borel, L Lefebvre  
517

Bearing capacity and slope instability solved by novel ground engineering solutions  
TJ Snell, M Singleton  
525

CSM cutter soil mixing - a new technique for the construction of subterranean walls initial experiences gained on completed projects  
E Stoetzer, WG Brunner, R Fiorotto, F-W Gerressen, M Schoepf  
534

Session 3b Managing geotechnical risk

The synergy between theory and practice in geo-engineering  
BR Hemmen, TJ Bles  
542

Inaccurate interpretation of offshore geotechnical site investigation results and risk associated: A case study of conductors collapse in driving  
H Shiri, B Molaei  
548

A geotechnical data base development and applying data mining techniques to extract the common trends of offshore geotechnical properties of South Pars gas field/Persian Gulf IR-Iran  
H Shiri, MH Pashnehtala, B Molaei  
556

High risk control for piling and deep foundations: A systematic approach  
M van Staveren  
563

Application of neurofuzzy approach to estimate duration and evaluate delay for diaphragm wall and barrette construction  
T Thipparat, V Chovichien  
571

Soil freezing under a volcano: the Naples Piazza Garibaldi experience using directional drilling for long boreholes  
D Vanni, M Siepi, F Cribari  
580

Lower risks with ecr®/eft®-measurements in underground constructions  
PPA Wolfs, WPH Knoops, BJ Admiraal, E Geutebrück  
588
Session 4 Environmental issues

A coupled FE-BE formulation for the prediction of vibrations due to vibratory and impact pile driving
HR Masoumi, G Degrande .......................................................... 592

Session 5 Safety & working conditions

Working platforms in geotechnical jobs: Recommendations for execution and maintenance
G Armijo, E Hontoria, G Marote, L Prieto ........................................ 604

Man-organisation-technology: Proposals for optimising preventive work
W Ensinger .......................................................... 610

Session 6 Monitoring and testing

A new analysis of data from statnamic tests on piles in clay
WF Anderson, DH Nguyen, AFL Hyde ........................................ 618

Statnamic pile testing case studies
MJ Brown, T Wood, T Suckling .................................................. 627

Numerical analyses of pile load testing and pile base grouting
W-C Cheng, JG Ni, TFS Chen .................................................. 635

Water tightness of diaphragm walls
R Elprama, G Hannink, VM Thumann ........................................ 645

Recent experiences with bi-directional static load testing
M England, PF Cheesman .................................................. 652

Recommendations for implementing and interpreting non-destructive integrity testing of cast in-situ concrete piles and diaphragm walls
JL García, C de las Heras, F Sánchez ........................................ 661

Application of global strain extensometer (Glostrecht) method for instrumented bored piles in Malaysia
AA Hanifah, LS Kai .......................................................... 669

Numerical simulation of quasi-static pile load test
NQ Huy, AF van Tol, P Hölscher .................................................. 677

Analysis of strain-dependent concrete modulus from mass instrumented test pile samples
LS Kai, LT Kian, TA Huat .................................................. 684

Analysis of static and dynamic horizontal load tests on steel pipe piles
P Kitiyodom, T Matsumoto, E Kojima, H Kumagai, K Tomisawa .................................................. 690

Dynamic horizontal load tests on steel pipe piles having different sizes in the same construction site and their analyses
E Kojima, H Kumagai, P Kitiyodom, T Matsumoto, K Tomisawa .................................................. 700

Time-dependent increase of the bearing capacity of displacement piles
F König and J Grabe .......................................................... 709

A novel approach to the performance evaluation of driven prestressed concrete piles and bored cast-in-place piles
SKrishnan, LS Kai .......................................................... 718
Variation of load settlement relations of 25 steel pipe piles constructed in a site from rapid pile load testing
T Matsumoto, K Matsuzawa, Y Kubo, M Tamura ................................................................. 727

Size and loading rate effects observed in plate load tests on a fill
K Matsuzawa, H Sakihama, H Nemoto, T Matsumoto ......................................................... 737

Pile integrity testing in the Netherlands
P Middendorp, J Schellingerhout ................................................................. 747

Self drilling soil nail systems to retain caving soils
A Porbaha, R Kim ................................................................. 756

Dynamic analysis of follower driven piles for the Venice flood gate project
F Rausche, G Pezzetti, C Jannacci, A Klesney ................................................................. 763

Wireless site data collection in construction and its impact on the business process
JN Scott ................................................................. 773

Static alternating cyclic horizontal load tests on driven steel pipe piles of foundations for highway bridges
K Tomisawa, S Nishimoto, H Fukushima, E Kojima, T Matsumoto ...................................... 782

Report on an instrumented continuous flight auger test pile at ascot.
PD Wilkinson, CS Butterworth ................................................................. 790

Re-use of foundations and the role of NDE techniques
H Williams, I Jones ................................................................. 796

Wave equation technique for estimating driven pile capacity
L Yang, R Liang ................................................................. 805

Special Session North-South Line project: Case study

Sandwich wall beneath Amsterdam Centraal Station: An innovative approach for jet grouting under difficult conditions
JCWM de Wit, PJ Bogaards, RD Essler, OS Langhorst, BKJ Obladen, CF Bosma,
JJ Sleuwaegen, H Dekker ................................................................. 818

The role of real-time instrumentation in large infrastructure projects
JG La Fonta, RPiggin ................................................................. 832

Deep diaphragm walls and bored piles for subway construction at the Amsterdam central station
W-R Linder, C Kaminski, Avd Put ................................................................. 843

Quality assurance in jet grouting for a deep seated slab in Amsterdam
T Passlick, K Doerendahl ................................................................. 852

Developments for mitigating measures from deep shafts of North/South-Line Amsterdam
K Pöllath, P-M Mayer, P Roberti ................................................................. 859

Amsterdam North South Line metro - construction of deep diaphragm walls for three underground stations
TAM Salet, PJCM de Kort, JD Crawley ................................................................. 868

Design development & installation of glass fibre reinforced polymer (GRP) "soft eyes" in diaphragm wall reinforcement cages
PM Wiltcher, SLP Kusse, P Kleingries ................................................................. 881
