CONTENTS

Object "Request" Based Clustering for Method Processing in Object-Oriented Database System
Shalab Goel and Bharat Bhargava..........................................................1

Defining Data Equivalence for Efficient Access of Images in a Distributed Environment
Melliyal Annamalai and Bharat Bhargava.................................................11

An Object-Oriented Biological Image Database for Cells from Histological Brain Sections
J. Song, T. Wang, S. Hwang, P. Sheu, D. Slater, G. Healey, and C. W. Cotman...........19

Knowledge-Assisted Retrieval Of Video Data
Young Francis Day, Ray Paul, Ashfaq Khokhar, and Arif Ghafoor........................26

Improvements In Multimedia Data Buffering Using Master/Slave Architecture
Sohail Sheikh and Raj Ganesan..............................................................33

Integration Of Software Process and Product Quality
Norman F. Schneiderding.................................................................37

Real-Time Distributed Multimedia Systems
Sameer S. Rahurkar and Nikolaos G. Bourbakis......................................43

Organization Domain Modeling (Odm): Extending Systematic D-Ame Beyond Software Domains
Mark. A.Simos....................................................................................51

Domain Analysis Modeling and Engineering Method Alming at Domain Specific Case
Yoko Shimizu, Yuji Tamaki and Toshlyuki Obi........................................68

Financial Product Modeling Based on D-Ame
Yuko Nakayama, Masan Fultita, Kiyotada Hori, Satoru Furuya and Rieko Yamamoto...66

Mechanical Design Support Using a Product Model
Tatsuhiro Nishioka, Toyohiko Hirota and Masaaki Hashimoto......................74

Dimensions of Software Design from Algorithms To Systems
Roland T. Mittemeer............................................................................82

Multi-Dimensional Workflow
Clarence A. Ellis and Gary J. Nult...........................................................90

Considerations of Distribution and Parallelism in Software Design
Flavio Depaoli and Mehdi Jazayeri.........................................................98

Inheritance Contradictions Between Functional and Extra-Functional Requirements
Eike Hochmüller.............................................................................106

K. Brink, L. Bun, J. Van Katwijk and W.J. Toetenel................................114

Optimal Decision for Distributed Detection Systems
Zakerlya Aliahzicoglou and Eric B. Hall..............................................121

On The Design of Space Compressor for VLSI Circuits In BIST using Nonexhaustive Test Sets
Sunil R. Das, Mansour Assaf and Amiya Nayak..................................129

Opportunistic Scheduling of Secure Tasks on a Multiprocessor
R. M. Venkatesan and S. Bhattacharya..............................................137

Computer Network Programming
John Y. Hsu....................................................................................145

An Integrated Architecture for Distributed Real-Time Systems Analysis
Jeffrey J.P. Tsai, Steve J. Yang, and Alan Liu.......................................152

Monitor Based Fault Management in a Distributed Environment
Hyung-Taek Lim, Seung-Min Yang and Moon Hae Kim..........................160

On Hybrid Monitoring of Real-Time Systems
Yaodong Bi....................................................................................168

The Process Road Between Requirements and Design
Michael Goedicke and Bashar Nuseibeh...........................................176
Process Technology Activities at the Software Engineering Institute
Alan M. Christie......................................................................................................................178

Requirements Engineering of a Medical Information System Using Rule-Based Refinement
of Petri Nets*
Claudia Ermel, Julia Padberg and Hartmut Ehrig..............................................................186

Towards An Integration of Software- Ergonomic Aspects in Formal Specifications of
Graphical User Interfaces
Bettina Eva Sucrow..............................................................................................................194

The Role Independent V&V in Upstream Software Development Processes
Steve Easterbrook..............................................................................................................202

On Formal Modelling and Verifying Performance Requirements of Distributed Systems
Marc Diefenbruch and Torsten Meyer................................................................................210

Towards a High Level Design Method for Software Systems
Torsten Meyer and Christian Piwetz....................................................................................218

APEX-A Petri Net Process Modeling Tool Built on a Discrete-Event Simulation System
James W. Gish......................................................................................................................226

An Integrated Environment For Developing Object-Oriented Cae Tools
Peter Hofmann, Michael Ryba and Utz G. Baitinger............................................................236

A New Approach Towards Accelerating VLSI-Synthesis
Andreas Falkenberg, Frank Burchert and Djamshid Tavangarian........................................244

A Knowledge-Based System-Level Construction Methodology
Peter Oehler and Klaus Waldschmidt...................................................................................251

Circuit Partitioning using High Level Design Information
Dirk Behrens, Klaus Hartbich and Erich Barke......................................................................259

Handling Inequality Constraints in Continuous Nonlinear Global Optimization
Tao Wang and Benjamin W. Wah..........................................................................................267

Harmony - A Software CALS System for Sharing Design Information In Distributed and
Concurrent Development Environment
Kiyoh Nakamura, Yoshinobu Fujii, Yukio Kiyokane, Masami Nakamura and Junichi Miyagawa......................................................................................................................275

Software Architecture Design Domain
S. A. White..........................................................................................................................283

A Tractable Method for Integration Testing Based on Unit Module Test Cases
W. H. Leung And C. Chandra...............................................................................................291

Second Generation Object-Oriented Analysis & Design Methods
Il-Yeol Song, E.K. Park, Wiwat Puntai and Xin Sun................................................................299

Reaching Strong Consensus in a General Network
Hin-Sing Siu, Yeh-Hao Chin, and Wei-Pang Yang...............................................................307

Construction of Multi Layer Neural Networks by Geometrical Means
Ibrahim Esat and Victoria Rao.............................................................................................317

Forecasting of High Frequency Foreign Currency Data Using Artificial Neural Networks.
a Study of Intraday Usd/Dem Exchange Rates
Parag Lodhia, Antoniou Antonious and Ibrahim Esat.........................................................323

Optimisation of Artificial Neural Network Structure Using Direct Encoding Graph Syntax (Degs)
Bhavin Kothari and Ibrahim Esat.........................................................................................326

Fuzzy Reasoning in Conceptual Design Problem
Sylwia Sobieszczocky, Ibrahim Esat and Edmund Wittbrodt..............................................334

The Effects of Redundant Output Representation in Hopfield Neural Network
T. J.Suh and I.I. Esat............................................................................................................343

Application of Neural Networks for The Prediction of Energy Use in Supermarket Buildings
T. J. Suh, S. A. Tassou, D. Datta and D. Marriott.................................................................351

Creativity in Design and Artificial Neural Networks
Constantinos C. Neocleous, Ibrahim I. Esat and Christos N. Schizas.................................359
Synchronous Reactive Programming in Ptolemy
Frédéric Baulanger and Guy Vidal-Naquet.................................................................364
Converting VSAM in COBOL to Embedded SQL
Hai Huang, Yamin Wang and Wei-Tek Tsai.................................................................369
A Structured Approach for Software Module Testing and Its Implications for Integration
Testing
Bahram Khalili and Murat M. Tanik........................................................................377
Automated Test Data Generation from Descartes Specifications
Hankyoo Joo and Joseph E. Urban...............................................................................384
A Model to Facilitate the Reuse of Specifications
Youwen Ouyang and Doris L Carver........................................................................392
Rapid Prototyping and System Evolution
MAJ David A. Dampier...............................................................................................400
Automatic Code Generation from the OMT-Based Dynamic Model
Jauhar Ali and Jiro Tanaka.........................................................................................407
Multiversion Databases - Support for Software Engineering
Wojciech Celiary and Jarogniew Rykowski.................................................................415
RETK: A Reverse Engineering Toolkit for Extracting Parallelism from Sequential Code
Ravi C. Erraguntla and Doris L. Carver.................................................................421
A Model-Independent View of the Mature Organization
Mark Hanna and Dale Langston...................................................................................429
Building Systems with Integrity Constraints
A. Q. Gates, F. G. Fernandez and L. Romo..............................................................437
Meta-CASE Based Realization of Design Rationale Management Systems
Grünbacher Paul........................................................................................................445
Evolving Software Design Methodologies in Automatic Programming Systems Using Cultural
Algorithms
Robert G. Reynolds, Elena Zannoni.................................................................452
Concurrent Specification and Analysis of Software Quality Requirements from Multiple
Perspectives
Xiaoqing Frank Liu, Scott Sigman and George Zobrist........................................460
Incorporating a Front-End Analysis for Modeling Nonfunctional Requirements
Jonathan Lee, Alan Liu, Jong-Yih Kuo, Chong Tan Lee and Wei T. Huang........468
Experiences with Data Models in Geographic Information Systems
Shashi Shekhar, Mark Coyle, Brajesh Goyal, Duen-Ren Liu and Shyamsundar Sarker........473
