Contents – Volume 3

Large Scale Computations and Simulations (Cont’d)

1 Symmetric Indefinite Preconditioners for FE Solution of Biot’s Consolidation Problem; Chen Xi, Kok-Kwang Phoon, and Kim-Chuan Toh
7 Three-Dimensional Modeling of Excavation Sequences; Richard J. Finno and J. Tanner Blackburn
13 Large Scale Numerical Simulation via Parallelization and Reconfigurable Computing Hardware; Erfan G. Nezami, Dawei Zhao, Youssef M. A. Hashash, Gregory Bauer, David Raila, and Jamshid Ghaboussi

Probabilistic Modeling and Design

18 Practical Reliability Approach in Geotechnical Engineering; B. K. Low
24 Probabilistic Liquefied Shear Strength; Morgan A. Eddy, Marte S. Gutierrez, and Mora Lumbantoruan
36 The Influence of Spatial Correlation on the Performance of Earth Structures and Foundations; Gregory B. Baecher and John T. Christian
42 Finite Difference Method for Probabilistic Load-Displacement Analysis of Drilled Shafts; Anil Misra and Lance A. Roberts
48 A Probabilistic Analysis System for Determining Internal/Interface Shear Strength; Bo Gao, Rafael Ospina, Henry Mock, and Claudia Moeller
54 Some Critical Issues in Geo-RBD Calibrations for Foundations; Fred H. Kulhawy and Kok Kwang Phoon

Multi-Scale Earthquake Modeling

60 Energy Dissipation and Liquefaction Assessment in Sands and Silty Soils; T. Kanagalingam and S. Thevanayagam
66 Effects of Partial Saturation on Liquefiable Ground Response; Mahmoud Seid-Karbasi and Peter M. Byrne
72 Analysis of Ground Motion: A Comparison of Some Available Methods; R. Z. Sarica and M. S. Rahman
78 Response of Liquefiable Granular Deposits to Multi-Direction Shaking; Usama El Shamy and Mourad Zeghal
83 Role of Numerical Modeling in Simplified Liquefaction Analysis of Sloping Ground; Scott M. Olson, Aaron L. Sacks, Benjamin B. Mattson, and Daniel A. Servigna
89 Nonlinear Effects in the Wave Propagation; D. K. Reyes and A. Lizcano
95 Micromechanical Study of the Dynamic Response of Unsaturated Granular Soil Deposits; Claudia Medina and Mourad Zeghal
101 An Internet Application for Frequency Domain Level Ground Amplification Studies; Alfredo Urzua, David Rose, and John T. Christian
Blast Effects on Below-Grade Walls and Underground Structures

106 3D Nonlinear Blast Model Analysis for Underground Structures; S. Choi, J. Wang, G. Munfakh, and E. Dwyre

112 Incorporation of Engineering Model Uncertainties in Probabilistic Analysis of Explosive Effects on Tunnel Facilities; Timothy R. Wyatt

117 Modeling of Surface Blast Effects on Underground Structures; Anirban De and Thomas F. Zimmie

121 Computation and 3D Visualization of Explosive Effects on Tunnels; Mark C. Etheridge and James A. Kainz

127 Response of Reinforced Concrete Walls Loaded by an External Buried Detonation; Darell Lawver and Howard Levine

Modeling of Complex Deep Foundation Systems

139 Finite-Element-Modelling of Large Diameter Monopiles for Offshore Wind Energy Converters; K. Lesny and J. Wiemann

145 Analysis of Large Group of Piles under Axial and Lateral Loading; Shin-Tower Wang, Luis Gonzalo Vasquez, and Lymon C. Reese

151 Viscohypoplastic Model Applied to the Case History of Piled Raft Foundation; F. Garcia, A. Lizcano, and O. Reul

Engineered Earth Structures

163 Numerical Models for Seismic Response of “El Buey” Dam; José Puentes, Lucía Rodríguez, and Edgar Rodríguez

169 Earth Dam Liquefaction and Deformation Analysis Using Numerical Modeling; Risheng (Park) Piao, Arlan H. Rippe, Barry Myers, and Kim W. Lane

175 Stability Analysis of Sacramento River Setback Levee; R. L. Money and A. Porbaha

193 Load Reduction by Geofoam for Culvert Extension: Numerical Analysis; L. Sun, T. C. Hopkins, and T. Beckham

204 Selected Factors Affecting Water-Balance Predictions for Alternative Covers Using Unsaturated Flow Models; Charles D. Shackelford and Craig H. Benson

210 Reactive Permeable Blankets for Cleanup of Contaminated Liquids; Milind V. Khire and Emmanuel Pepprah

215 Effects of Loading Sequences on Embankment Settlement and Its Prediction; Chuang Yu, Songyu Liu, and Zhenshun Hong
Instrumentation, Monitoring, and FEM Evaluation of Long-Term Stability of a Bridge Abutment Slope; Robert Liang and Shuyu Liu

Numerical Modeling and Analysis for Pavement Systems

Nondestructive Flexible Pavement Evaluation Using ILLI-PAVE Based Artificial Neural Network Models; O. Pekcan, E. Tutumluer, and M. R. Thompson

Estimation of Resilient and Permanent Deformation Behavior of Granular Bases from Physical Parameters; A. A. A. Molenaar and M. Huurman

Modeling of a Flexible Pavement Structure Applying the Hypoplastic Constitutive Law; H. A. Rondón and A. Lizcano

Dynamic Hydraulic Conductivity (Permeability) of Asphalt Pavements; M. Emin Kutay, Ahmet H. Aydilek, and Tom Harman

Computational Issues in the Development of a 3D Contact Interface Element; C. Kasbergen, Y. Zhao, and A. Scarpas

Numerical Analyses of Geogrid Reinforcement of Flexible Pavements; M. D. Nazzal, M. Y. Abu-Farsakh, and L. N. Mohammad

Resilient Modulus of Subgrade Soils A-1-b, A-3, and A-7-6 Using LTPP Data: Prediction Models with Experimental Verification; Shraddha Joshi and Ramesh B. Malla

Finite Element Modeling Approach for Flexible Pavements with Geosynthetics; Isaac Howard and Kimberly Warren

An Energy Based Constitutive Framework for Modeling of Asphalt Concrete: Theoretical, Experimental, and Numerical Aspects; A. Scarpas and C. Kasbergen

Spatial Clustering for Determining Economical Highway Pavement Let Projects; Yichang (James) Tsai, Chientai Yang, and Zhaohua Wang

Earth Retaining Structures: Intelligent Design

Use of Lateral Movements and Strut Loads in Inverse Analysis of Supported Excavations; Richard J. Finno and Cecilia Reechea

A Practical Method for Assessment of Seismic-Induced Deformations of Underground Structures; A. Bobet, G. Fernández, J. Ramírez, and H. Huo

Temporary Excavation Support System—A Case Study in Virginia; M. S. Hossain, J. Mydlnski, K. N. Rao, and M. A. Haque

Seismic Tests on the Side Walls of the Navigli Channel; Giovanni Cascante, Homayoun Najjaran, and Paola Ronca

M. (Modeling, Monitoring, and Managing)—A Comprehensive Approach to Controlling Ground Movements for Protecting Existing Structures and Facilities; Michael P. Walker and Francis D. Leathers

Three-Dimensional Properties of MSE Bridge Abutments; Nien-Yin Chang, Trever Wang, and Man Cheung Yip

2Calibrating Vertical Deformations in a Finite Element Model of an MSE Wall; Aaron S. Budge, James A. Bay, and Loren R. Anderson

Representing Internal Bracing Systems in 3-D Models of Deep Excavations; J. Tanner Blackburn and Richard J. Finno

Comparison of 2D and 3D Seepage Model Results for Excavation near Levee Toe; Rebecca L. Money
Numerical Modeling and Performance of a Retention System at the Virginia State Capitol; Nasser Massoud

Dynamic and Economic Design of Rigid Retaining Wall; Y. Wu, Shamsher Prakash, and V. K. Puri

Modeling and Characterization of Deep Soil Cement

Analysis of Geotextile Reinforced Embankment over Deep Mixed Soil Columns: Using Numerical and Analytical Tools; Raja S. Madhyannapu, Anand J. Puppala, Sahadat Hossain, Jie Han, and Ali Porbaha

Two and Three-Dimensional Modeling of DM Columns under Embankments; J. Huang, J. Han, and A. Porbaha

Numerical Modeling of Deep Soil Mixing Excavation Support; Cassandra J. Rutherford, Giovanna Biscontin, Demetrios Koutsoftas, and Jean-Louis Briaud

Reliability of Deep Mixing Method Columns for Embankment Support; M. P. Navin and G. M. Filz

In-Situ Solidification of River Sediments Using Cement Deep Soil Mixing (CDSM); Ali Maher, W. Scott Douglas, Farhad Jafari, and David Yang

In-Situ Soil Strength After Deep Mixed Columns Installation; Yong-feng Deng, Song-yu Liu, and Zhen-shun Hong

Modeling of Soil Improvement

Artificial Ground Freezing at Sophiaspoortunnel (The Netherlands)—Freezing Parameters: Data Acquisition and Processing; Carlo Crippa and Vittorio Manassero

Ground Improvement at the Henry Ford Avenue Grade Separation; Allen M. Yourman, Jr., Christopher M. Diaz, and Gary K. Gilbert

Numerical Investigation of the Efficiency of Vertical Drainage Systems; X. Liu, A. Scarpas, C. Zwanenburg, and J. Barends

Consolidation Characteristics of SCP-Reinforced Composite Ground; Yun-Tae Kim and Hyun-II Park

Back Analysis of Parameters for Construction Garbage as Road Fill; Jingchun Wang, Weihong Hou, and Riqing Xu

FE Analysis Evaluation on Lateral Pressure and Deformation of Lightweight Backfill; S. Dashdorj S. and S. Miura

Numerical Analysis of Jet Grout Elements for Braced Excavation in Soft Clay; C. E. Ho and S. Hu

On Modeling Isolated Footings on Reinforced Sand; F. M. Abdrabbo, H. M. Abouseeda, K. E. Gaaver, and A. Z. Elwakil

Modeling of Multi Layer Extensible Geosynthetic-Reinforced Granular Fill over Soft Soil; Kousik Deb, S. Chandra, and P. K. Basudhar

Numerical Simulation of Soil Densification Using Vibro-Stone Columns; T. Shenthan, S. Thevanayagam, and G. R. Martin

Improvement of Soft Clays Using Vacuum-Assisted Consolidation Method; Cholachat Rujikaitkamjorn and Buddhima Indraratna

Composite Modulus of Composite Foundation under Embankment; Ding-wen Zhang, Song-yu Liu, Zhen-shun Hong, and Yong-feng Deng

Jet Grouted Settlement Isolation Wall at the Henry Ford Avenue Grade Separation; Allen M. Yourman, Jr., Christopher M. Diaz, and Gary K. Gilbert
Simulation and Visual Analysis
Simulations for Education and Training

459 Computer Simulation of Soil Liquefaction; Sherif A. Elfass, Gary M. Norris, and Ellen Jacobson
465 Virtual Geotechnical Laboratory; Muniram Budhu
469 DEM as an Educational Tool in Geotechnical Engineering; S. Lobo-Guerrero and L. E. Vallejo
475 Virtual Simulator for Advanced Geotechnical Laboratory Testing; Dayakar Penumadu and Amit Prashant
481 Integration of NEES Equipment Sites for Geotechnical Engineering Education; Inthuorn Sasanakul, Thomas Zimmie, Tarek Abdoun, and Usama El Shamy
487 Employing Visualization Techniques for Learning of Constitutive Relations; David R. Groholski and Youssef M. A. Hashash
492 GROW—A Digital Library for Geotechnical Resources and a New Learning Environment for Education; Muniram Budhu
497 Physical and Numerical Modeling of Rock Joints and Slope Stability; Sherif A. Elfass, Reka Aczel, Gary M. Norris, and Ellen Jacobson

Imaging Based Quantification

503 Semiautomatic Rock Mass Discontinuity Detection Using Digital Images; Alfred V. Antony and Joseph E. Dove
509 Image-Based Sensing of 3-D Displacements for Enhanced Soil Model Calibration; Zenón Medina-Cetina and Amy Rechenmacher
515 Evolution of Sand-Structure Interface Response during Monotonic Shear Using Particle Image Velocimetry; Zachary J. Westgate and Jason T. DeJong
521 Synthesis of Sand Particles from 3D Shape Descriptors Using Tomographic Reconstruction Techniques; Daniel Barrot, Patrick Giordano, Jr., Shreekanth Mandayam, and Beena Sukumaran
527 Soil Image Processing—Single Grains to Particle Assemblies; Roman D. Hryciw, Seungcheol Shin, and Yongsub Jung
533 Liquid Head on Landfill Liners Due to Leachate Recirculation; Milind V. Khire, Mazen Haydar, and Moumita Mukerjee
539 Use of Digital Imaging Technique for Studying Strain Localizations; Ajanta Sachan, Han Lin, and Dayakar Penumadu
545 Use of Digital Photography to Analyze Foil Strain Gages on Geosynthetics; Kimberly A. Warren, Isaac L. Howard, and Jeremy A. Brooks

3-D Visualization

551 3D Data Viewing of Centrifuge Physical Models; Hassan Radwan and Tarek Abdoun
555 Simulation of Dynamic Compaction Processes in Saturated Silty Soils; R. Nashed, S. Thevanayagam, and G. R. Martin
561 Incorporation of Terrain Elevation Uncertainties in Vulnerability Assessment of Tunnel Facilities; Timothy R. Wyatt
567  Adaptive and Real-Time Geologic Mapping, Analysis, and Design of Underground Space (AMADEUS); M. Gutierrez, D. Bowman, J. E. Dove, M. Mauldon, and E. Westman

573  3D Visualization of Shearing in Granular Materials; Khalid A. Alshibli and Bashar Alramahi
