2005 IEEE/SP 13th Workshop on Statistical Signal Processing (SSP)

Bordeaux, France
17-20 July 2005

Volume 2 of 2
# Table of Contents

## 1 - Special Session: Statistical Signal Processing in High Energy Physics

- **Opportunities for Statistical Signal Processing in High-Energy Physics** .................................................. 3  
  Bruce Denby
- **Filtering, Robust and Adaptive Methods for Track Reconstruction** .......................................................... 8  
  Are Strandlie
- **Signal Reconstruction in a High Rate Environment for Scintillator Calorimeters** ................................. 14  
  Esteban Fullana, J. Castelo, V. Castillo, C. Cuenca, A. Ferrer, E. Higon, C. Iglesias,  
  A. Munar, J. Poveda, A. Ruiz-Martinez, B. Salvachua, C. Solans, R. Teuscher, J. Valls
- **Track Identification in High Energy Physics** ......................................................................................... 18  
  Hagit Messer-Yaron, Giora Mikenberg, David Primor

## 2 - Special Session: Student Paper Contest 1

- **Simulation of positive normal variables using several proposal distributions** ........................................ 27  
  David Brie, Jérôme Idier, Vincent Mazet
- **PHD Filtering for Tracking an Unknown Number of Sources Using an Array of Sensors** .................. 33  
  Balakumar Balasingam, Thiagalingam Kirubarajan, James Reilly, Abhijit Sinha
- **Composite Likelihood Estimation for Multivariate Mixed Poisson Distributions** .............................. 39  
  Florent Chatelain, Jean-Yves Tourneret
- **Parametric Estimation of Multi-Dimensional Affine Transformation in the Presence of Noise: a Linear Solution** .................................................................................................................. 45  
  Joseph M. Francos, Rami Hagege

## 3 - Special Session: Student Paper Contest 2

- **Robust Independent Component Analysis** .............................................................................................. 51  
  Sajjad Baloch, Marc Genton, Hamid Krim
- **Robust Linear Receiver Design for Multi-Access Space-Time Block Coded MIMO Systems Using Stochastic Optimization** ........................................................................................................... 55  
  Alex Gershman, Yue Rong, Sergiy Vorobyov
- **A New Family of Approximate QR-LS Algorithms for Adaptive Filtering** ........................................ 61  
  S. C. Chan, Yi Zhou
- **Multichannel Mono-Path Periodic Signal Extraction with Global Amplitude and Phase Modulation for Music and Speech Signal Analysis** ................................................................. 66  
  Dirk Slock, Mahdi Triki
- **A New Family of Approximate QR-LS Algorithms for Adaptive Filtering** ........................................ 72  
  Nima Khajehnouri, Ali Sayed
- **Particle filtering under communications constraints** ............................................................................ 77  
  John Fisher, Alexander T. Ihler, Alan Willsky

## 4 - Adaptive Filters

- **An Efficient Model for the Convergence Behavior of the FXLMS Algorithm with Gaussian Inputs** .................................................. 85  
  José Carlos Bermudez, Leonardo Resende
- **Robustness Analysis of a Gradient Identification Method for a Nonlinear Wiener System** .................. 90  
  Ernst Aschbacher, Markus Rupp
- **Tracking Properties of a Convex Combinations of two Adaptive Filters** .......................................... 95  
  Jerónimo Arenas-Garcia, Anibal Figueiras-Vidal, Ali Sayed
- **A New Proportionate Fast LMS/Newton Algorithm for Adaptive Filtering** ....................................... 101  
  S. C. Chan, K. L. Ho, Yi Zhou
Table of Contents

Comparative Analysis of Importance Sampling Techniques to Estimate Error Functions for Training Neural Networks ................................................................. 107
Maria Pilar Jarabo-Amores, Francisco López-Ferreras, Manuel Rosa-Zurera, José Luis Sanz-González

Geometric analysis of filtered-x LMS algorithms ................................................... 112
Linda DeBrunner, Victor DeBrunner, Yunhua Wang, Dayong Zhou

A Robust General Normalised Gradient Descent Algorithm .................................. 117
Anthony Kuh, Danilo Mandic, Dragan Obradovic

An Improved Recursive Least Squares Algorithm Robust to Input Power Variation.................................................. 121
José Carlos Bermudez, Charles S Ludovico

Bayesian Adaptive Filtering at Linear Cost ......................................................... 125
Tayeb Sadiki, Dirk Slock

5 - Adaptive Equalization

An Iterative Method for Blind Equalization of Multiple FIR Channels ................. 133
Jun-Da Chen, Shang-Chun Tsai, Fang-Biau Ueng, Shiann-Jeng Yu

CCA based Algorithms for Blind Equalization of FIR MIMO Systems ................. 138
Ignacio Santamaria, Javier Via

Using LMS Weighting Values As the Channel State Information for OFDM based Systems .............................................................. 143
Yung-An Kao, Chi-Ting Wu

Tracking analysis of some space-time blind equalization algorithms ..................... 149
Maria Miranda, Magno Silva

Adaptive Precoding in MIMO Wireless Communication Systems Using Blind Channel Prediction Over Frequency Selective Fading Channels ................................................ 155
Luis Castedo, Paula, M. Castro, Joaquin Miguez

Rapid Equalisation for a High Integrity Bluetooth Receiver .................................. 161
Choo Leng Koh, Charles Tibenderana, Stephan Weiss

Flexible MMSE DFE Using Length and Lag Adaptation ................................ 166
Colin Cowan, Yu Gong

Functional Link Equaliser with Decision Selection for Combatting Cochannel Interference .............................................................. 171
Gavin Paterson, John Soraghan

High Fractionally Spaced Constant Modulus Blind Equalization for high order QAM Signalling .............................................................. 176
Abdelouahib Zaouche, Iyad Dayoub, Jean Michel Rouvaen

Concurrent Constant Modulus Algorithm and Decision Directed Scheme for Synchronous DS-CDMA Equalisation .............................................................. 181
Mahmoud Hadeef, Stephan Weiss

6 - Adaptive Estimation

Autocorrelation-based Algorithm for ARMA Model Order Selection in Colored Gaussian Noise .................................................. 189
Adnan Al-Smadi

Parameter estimation in a class of nonlinear state - space models ......................... 193
Mihai Enescu, Visa Koivunen

Error Whitening Non-Parametric Maximum Likelihood Channel Estimator .......... 197
Vimal Bhatia, Bernard Mulgrew

On the Efficient Frequency Estimation of a Single Tone .................................... 199
Jonathon Chambers, Andreas Jakobsson, Malcolm Macleod, Zhuo Zhang

Spectral Symmetry Iterative Frequency Estimation Algorithm .......................... 203
Sam Reisenfeld, Jeffrey Tsui
## Table of Contents

1. **Structural Breaks Estimation for Non-stationary Time Series Signals** ................................. 207
   Richard Davis, Thomas Lee, Gabriel Rodriguez-Yam

2. **Fast Algorithms for Minor Component Analysis** ................................................................. 213
   Karim Abed-Meraim, Samir Attallah, Steve Bartelmaos

3. **Adaptive Linear Estimators, Using Biased Cramér-Rao Bound** ........................................... 218
   Saeed Gazor, Kamal Shahtalebi

4. **Non-Stationary Time-Series Segmentation based on the Schur Prediction Error Analysis** .......... 224
   Olivier Adam, Christophe Laplanche, Maciej Lopatka, Jean-François Motsch, Jan Zarzycki

7. **Adaptive Array Processing**

   1. **Real-Time Implementation of an Adaptive Bayesian Beamformer** ........................................ 231
      Joseph Arrowood, Scott Briles, Thierry Cases, Etienne Fiset, Dax Turcotte

   2. **Wideband Robust Beamforming based on Worst-Case Performance Optimization** ............... 237
      El-keyi Amr, Alex Gershman, Thia Kirubarajan

   3. **A State Space Approach To Robust Adaptive Beamforming** ............................................. 243
      El-keyi Amr, Alex Gershman, Thia Kirubarajan

   4. **Robust Wideband DOA Estimation** .................................................................................... 249
      Fabrizio Sellone

   5. **Constant Beamwidth Generalised Sidelobe Canceller** ...................................................... 255
      Choo Leng Koh, Stephan Weiss

   6. **Fast Adaptive ESPRIT Algorithm** ...................................................................................... 260
      Roland Badeau, Bertrand David, Gael Richard

   7. **Sufficient Condition for an Adaptive System to Approximate the Neyman-Pearson Detector** ...... 265
      Roberto Gil-Pita, Pilar Jarabo-Amores, Francisco López-Ferreras, Manuel Rosa-Zurera

   8. **A Partially Adaptive Beamforming with Slepian-based Quiescent Response** ...................... 270
      Huixia He, Shawn Kraut

   9. **Multi-Rank Adaptive Beamforming** ................................................................................... 275
      Magnus Lundberg, Ali Pezeshki, Louis L. Scharf

8. **Adaptive Estimation**

   1. **Simultaneous Segmentation, Compression, and Denoising of Signals using Polyharmonic Local Sine Transform and Minimum Description Length Criterion** .......................... 283
      Naoki Saito, Ernest Woei

   2. **Lattice Filter with Adjustable Gains and its Application in Optical Signal Processing** .......... 289
      Louis Hunt, Govind Kannan, Duncan Macfarlane, Issa Panahi, Jian Tong

   3. **An Algorithm for Minimum Bandpass Sampling Frequency for Multiple RF Signals in SDR System** 295
      Vikram Gadre, Satyabrata Sen

   4. **AM-FM Decomposition of Speech Signals: an Asymptotically Exact Approach based on the Iterated Hilbert Transform** ................................................................. 301
      Giorgio Biagetti, Paolo Crippa, Francesco Gianfelici, Claudio Turchetti

   5. **MR Adaptive Filters based on the Hirschman Optimal Transform** ..................................... 306
      Essama Alkhouli, Victor DeBrunner, Mark Yeary, Yan Zhai

   6. **Signal Processing Application of Randomized Low-Rank Approximations** ........................ 311
      Peter Parker, Vahid Tarokh, Patrick Wolfe

   7. **Novel Blind Deconvolution Method via Maximum Entropy** ............................................. 317
      Zion Bobrovsky, Monika Pinchas
# Table of Contents

Rank Reduction for Rapid Timing Acquisition in Multiple Access Communications .............................................. 323
Hongya Ge, Louis Scharf

9 - Computer Intensive Statistical Inference

A Bayesian procedure to recognize independent signals................................................................. 331
Terrence L. Fine, Chin-Jen Ku

Change-point Detection in Astronomical Data by using a Hierarchical Model and a Bayesian Sampling
Approach .................................................................................................................... 335
Nicolas Dobigeon, Jeffrey D. Scargle, Jean-Yves Tourneret

Deterministic Particle Filters for Joint Blind Equalization and Decoding on Frequency Selective Channels .... 341
Luiz Baccalà, Claudio Bordin

Particle Filtering with Alpha-Stable Distributions ................................................................................. 346
Alin Achim, Paul Brasnett, David Bull, Nishan Canagarajah, Lyudmila Mihaylova

Inference for Probabilistic Unsupervised Text Clustering ........................................................................... 351
Olivier Cappe, Lois Rigouste, François Yvon

Sample-Efficiency-Optimized Auxiliary Particle Filter ............................................................................... 357
Feng Guo, Gang Qian

Optimal Recursive Filtering using Gaussian Mixture Model ........................................................................... 362
Igal Bilik, Joseph Tabrikian

Approximate Conditional Mean Particle Filter ......................................................................................... 368
Thia Kirubarajan, James Reilly, Derek Yee

Convex Surrogates and Stable Message-passing: Joint Parameter Estimation and Prediction in coupled
Gaussian Mixture Models .............................................................................................................. 373
Martin Wainwright

Estimating Local Intrinsic Dimension with k-Nearest Neighbor Graphs ...................................................... 379
Jose Costa, Abhishek Girotra, Alfred Hero

10 - Image Analysis and Applications

Geometric Harmonics as a Statistical Image Processing Tool for Images on an Irregularly-Shaped Domain .... 387
Naoki Saito

Minimum Eigenvalue based 3-D AR Model Order Selection ........................................................................ 393
Brahim Aksasse, Yannick Berthoumieu, Mohamed Najim, Youssef Sitou

Multiscale Object Features from Clustered Complex Wavelet Coefficients ................................................. 398
Ryan Anderson, Julien Fauqueur, Nick Kingsbury

Providing Sample Shape Statistics with FCA and ISA Approaches ............................................................... 403
Sofiane Boudaoud, Olivier Meste, Hervé Rix

Classification of Images Using Spatial Random Trees .............................................................................. 409
Charles Bouman, Mary Harper, Ilya Pollak, Wiley Wang

New Features Extraction and Application based on Gaussian-Hermite Moments in Fingerprint
Classification .......................................................................................................................... 413
Mo Dai, Lin Wang

A Combined Multiresolution Approach for Faint Source Extraction from Infrared Astronomical Raw
Images Sequence ...................................................................................................................... 419
Ahmed Nabil Belbachir, Peter Goebel

Application of a Two-Stage Algorithm for Adaptive Detection in Hyperspectral Imaging ......................... 425
Michael Farrell, Russell Mersereau

Asymptotic Global Confidence Regions for 3-D Parametric Shape Estimation in Inverse Problems .......... 431
Yoram Bresler, Pierre Moulin, Jong Ye
# Table of Contents

**A Bayesian Approach to Nonlinear Diffusion based on a Laplacian Prior for Ideal Image Gradient** .................................................. 437  
Antonis Katartzis, Wilfried Philips, Aleksandra Pizurica, Hichem Sahli, Iris Vanhamel

**11 - Direction-of-Arrival Estimation and Tracking**

Comparison of two IMM tracking and classifier architectures based on Extended and Unscented Kalman Filters with comparison to CRLB ................................................................. 445  
Alfonso Farina, Sandro Immediata, Marco Meloni, Luca Timonieri, Domenico Vigilante

Analysis and Design of (non-)Isotropic Arrays for 3D Direction Finding ................................................................................. 451  
Houcem Gazzah, Sylvie Marcos

**An Algorithm for Tracking Multiple Wideband Cyclostationary Sources** .............................................. 456  
Howard Fan, Huiqin Yan

**Application of Linear Discriminant Functions to Location Estimation** .................................................. 461  
Gallo Nuño-Barranco, José Manuel Páez Borrallo

**An Acoustic Multiple Target Tracker** ................................................................................................................... 467  
Volkan Cevher, James McClellan

**Bayesian Model Selection for Multisensor Track-to-Track Association and Track Fusion** .................................................. 473  
Huimin Chen, X. Rong Li

Analysis of Direct Position Determination Approach in the Presence of Model Errors .............................................. 479  
Alon Amar, Anthony J. Weiss

**Idealization of Wideband Sources in Colored Noise via Generalized Least Squares (GLS)** .................................................. 483  
Kash Khorasani, Javad Mohammadpour Velni

**Estimation Theory**

Bounds Dominating the Cramér-Rao Bound ........................................................................................................ 491  
Yonina Eldar

**Driven Haar-Fisz transform for multiscale variance stabilization** ................................................................................ 497  
Que Delouille, Piotr Fryzlewicz

**Minimax Estimators: Improving on Least Squares Estimation** .................................................................................. 502  
Ben-Haim, Yonina Eldar

Kullback's Symmetric Divergence Criterion with Application to Linear Regression and Time Series .................................................. 508  
Belkacemi, Abed-Krim Seghouane

Central Quadratic forms on Complex Random Matrices and Applications ........................................................................ 512  
Ratnarajah

**Real Bound for Harmonic Retrieval in Multiplicative and Additive Gaussian Noise** .................................................. 517  
Ciblat, Mounir Ghogho

**Derivation of the Bayesian Bounds for Parameter Estimation** ........................................................................ 523  
Forster, Pascal Larzabal, Alexandre Renaux

**M-Estimators for Use in Structured and Unstructured Robust Covariance Estimation** .................................................. 529  
Beich, Christopher Brown, Christian Debes

**The Normality of the Sample Covariances of Evanescent Fields in Noise** .................................................. 535  
M. Francos, Mark Kliger

**Detection and Classification**

**Detection of Signals in Nonstationary Random Noise via Stationarization and Stationarity Test** .................................................. 543  
Okui, Akira Ohsumi, Ryo Okui

**Radiation Detection Using Jump Markov Linear Systems** ........................................................................ 547  
Dautremer, Luc Eglin, Thierry Montagu, Jean-Christophe Trama
# Table of Contents

Activity Detection of a PSK Signal in Unknown White Gaussian Noise: Optimal and Suboptimal Invariant Detectors .................................................. 552
Mohammad Reza Aref, Mostafa Derakhtian, Saeed Gazor, Aliakbar Tadaion

Estimation of the Number of Sources with DOA priors .................................. 558
Mostafa Kaveh, Mahdi Nezafat

Computationally Efficient Method for Estimation of the Number of Signals in Multipath Environment 564
Yoji Ohashi, Akira Sano, Jingmin Xin

On Signal Detection Using the Benjamini-Hochberg Procedure .......................... 570
Johann F. Boehme, Pei-Jung Chung, Alfred Hero, Christoph F. Mecklenbraeuker

Scale-Invariant Adaptive Detection by a Ratio of Generalized Variances .................. 574
Ivars Kirsteins

Sequential Design of Experiments for a Rayleigh Inverse Scattering Problem ............ 580
Alfred Hero, Raviv Raich, Raghu Raman Rangarajan

Minimum expected risk probability estimates for nonparametric neighborhood classifiers 586
Luca Cazzanti, Maya Gupta, Santosh Srivastava

Transformation of Adaptive Thresholds by Significance Invariance for Change Detection 591
Til Aach, Alexandra Paul Condrache

14 - Channel Estimation and Synchronization

On the effects of nonuniform sampling for interferometric phase estimation in the presence of layover 599
Federica Bordoni, Fulvio Gini, Andreas Jakobsson, Fabrizio Lombardini

A Bernoulli-Gaussian model for multipath channel estimation in downlink WCDMA .......... 605
Marilyn Arndt, Lahouari Fathi, Genevieve Jourdain

A Fast Blind Channel Estimation Method for ZP-OFDM Systems .......................... 610
Faisal O. Alayyan, Yee Hong Leung, Abdelhak Zoubir

Multipath Delay Estimation using the Magnitude Spectrum .................................. 615
Granger Hickman, Jeffrey Krolik

Diamond Contour-based Phase Recovery for Cross-QAM Constellations .................. 621
Marcos Alvarez-Diaz, Roberto Lopez-Valcarce

Kalman Filter for Channel Tracking in Wireless MC-CDMA systems ........................ 627
S. C. Chan, H Cheng, Z. G. Zhang

Semi-blind Parameters and Symbols Joint Estimation for a Hammerstein Type Channel using Precoding 632
Gérard Favier, Alain Kibangou

Frequency Offset Estimation for Galileo/GPS Receivers based on Differential Correlation 637
Christoph Günther, André Neubauer, Andreas Schmid

Blind MIMO system estimation based on PARAFAC decomposition of HOS tensors ........ 642
Athina Petropulu, Yuanning Yu

Two New Approaches to Channel Prediction based on Sinusoidal Modelling ................ 646
Ming Chen, Torbjörn Ekman, Mats Viberg

15 - Hidden Markov Models

Recursive Computation of the Score and Observed Information Matrix in Hidden Markov Models 653
Olivier Cappé, Éric Moulines

Restoring Hidden non Stationary Process using Triplet partially Markov Chain with Long Memory Noise 658
Pierre Lanchantin, Wojciech Pieczynski

Modeling temporal dependence of Spherically Invariant Random Vectors with triplet Markov chains 663
Nicolas Brunel, Wojciech Pieczynski
**Table of Contents**

Bayesian Smoothing Algorithms in Pairwise and Triplet Markov Chains ............................................. 669  
Boujemaa Ait-el-Fquih, François Desbouvries

Modeling non Stationary Hidden semi-Markov Chains with Triplet Markov chains and Theory of Evidence .......... 675  
Wojciech Pieczynski

16 - Signal Restoration, Reconstruction and Enhancement

Building a bayesian framework to analyse measurements from the Ligne D'Intégration Laser Facility ................. 683  
Raphaël André, Pierre Minvielle-Larousse, Xavier Vallières

Sparseness via L2-norm minimization? .................................................. 687  
Felipe Marti-Lopez

Nonparametric Inference for Pile-Up Correction in Nuclear Spectroscopy ........................................... 692  
Eric Moulines, François Roueff, Antoine Souloumiac, Thomas Trigano

Parallel deflation with alphabet-based criteria for blind source extraction ........................................... 697  
Pierre Comon, Ludwig Rota, Vicente Zarzoso

Enforcing Sparsity, Shift-Invariance and Positivity in a Bayesian Model of Polyphonic Piano Music ................... 702  
Thomas Blumensath, Mike Davies

Reconstruction of Unequally—Sampled Random Processes ............................................................... 707  
David J. Thomson

Kernel Wiener Filter using Canonical Correlation Analysis Framework .............................................. 713  
Mahmood Azimi-Sadjadi, Makoto Yamada

Texture Segmentation with Diffusions on Arbitrary Graphs ............................................................. 719  
Xiaoang Dong, Ilya Pollak

Speech Enhancement using Nullspace-based Sound Field Control for Barge-in Free Spoken Dialogue Interface .......... 722  
Shigeki Miyabe, Hiroshi Saruwatari, Kiyohiro Shikano, Yosuke Tatekura

A Minimax Approach for Mean Square Denoising ........................................................................ 728  
Yonina Eldar, Jean-Christophe Pesquet

Robust Video Analysis: Which Statistics to Use? .................................................................................. 733  
Dris Aboutajdine, Hocine Cherifi, Mohammed El Hassouni

17 - System Identification and Spectrum Estimation

Semiparametric Model Selection with Applications to Regression .................................................. 741  
Heimin Chen, X. Rong Li, Zhanlue Zhao

Efficient Finite Positivity Test Algorithm for Statistical Signal Processing Applications .......................... 747  
Anvinathan Ganesan, Issa Panahi

Nonnull-Gaussian spectral analysis of unevenly spaced astrophysical data ........................................... 752  
Manu Bourguignon, Hervé Carfantan

Class of Quadratic FIR Filters with Applications to Spectral Shaping and Narrow Band Generation .......... 758  
Issa Panahi, Kripasagar Venkat

Spline Models for N-Dimensional Discrete-Space Self-Similar Signals .................................................. 764  
Suein Lee, Rajesh Narasimha, Raghveer Rao

Sequential Line Search Applied to Blind Channel Identification: Identifiability Conditions ........................ 769  
Pierre Comon, Myriam Rajih

Exact Solution for Incorporating Boundary Continuity Constraints in Subband All-Pole Modelling .................. 775  
James Hill, James Hopgood

Age Passing Expectation-Maximization Algorithms .............................................................................. 781  
Nath A. O'Sullivan
Table of Contents

Asymptotics for Linear Predictors of Strongly Dependent Time Series .................................................. 787
Pascal Bondon, Wilfredo Palma

Noisy Speech De-Reverberation as a SIMO System Identification Issue ................................................. 793
William Bobillet, Roberto Diversi, Eric Grivel, Roberto Guidorzi, Mohamed Najim, Umberto Soverini

18 - Time-Frequency and Time-Scale Analysis

Adaptive Minimum Entropy Decomposition on the Time-Frequency Plane ................................................. 801
Selin Aviyente, Zeyong Shan

Sparse Representations of images using overcomplete complex wavelets .................................................. 805
Tony Adeyemi, Mike Davies

Robust Quadratic Time-Frequency Distributions for the Analysis of Multicomponent FM Signals in Heavy-Tailed Noise ........................................................................................................... 810
Karim Abed-Meraim, Mohamed Sahmoudi

Reassignment of diffused time-frequency distributions .............................................................................. 815
Julien Gosme, Cédric Richard

Modified EZW Coding for the M-Band Wavelet Transform and its Application to Image Compression .......... 820
Ganesh Bhokare, Vikram Gadre, Raghuram Karthik

Time-Frequency and Dual-Frequency Representation of Fractional Brownian Motion ............................... 826
Alfred Hanssen, Tor Arne Oigard, Louis L. Scharf

Maximum likelihood parameter estimation of short time multicomponent signals with nonlinear AM/FM modulation .................................................................................................................. 831
Francois Leonard, Meryem Jabloun, Nadine Martin, Michelle Vieira

Adaptive Coherence Analysis of Nonstationary Time Series using the Adaptive Lomb Spectrum ............... 837
S. C. Chan, Z. G. Zhang

Image Compression with Best Local Cosine Bases ........................................................................................ 841
Yan Huang, Ilya Pollak

Linear Methods for TFARMA Parameter Estimation and System Approximation ..................................... 844
Franz Hlawatsch, Michael Jachan, Gerald Matz

19 - Radar Array Signal Processing

High resolution vector-sensor array processing using quaternions .............................................................. 853
Nicolas Le Bihan, Jérôme I. Mars, Sebastian Miron

The noncentral Wishart distribution: properties and application to speckle imaging ................................ 859
Andréa Ferrari, Gérard Letac, Jean-Yves Tourneret

The RSMI Algorithm for Airborne MTI Radar .............................................................................................. 865
José Carlos Bermudez, Eduardo Hermesmeyer

Robust Adaptive Beamforming Using Probability-Constrained Optimization ............................................ 869
Alex Gershman, Yue Rong, Sergiy Vorobyov

Reducing Excess Variance in Beamspace Methods for Uniform Circular Array ........................................ 875
Fabio Belloni, Visa Koivunen, Andreas Richter

Buried Objects Localization in Presence of Correlated Signals .................................................................. 879
Salah Bourennane, Zineb Saidi

Application of the Fractional Fourier Transform to ISAR Range Profile Compensation of Fast-moving Target .............................................................................................................................. 885
Liu Aifang, Jin Lin, Zhu Xiao-hua

On DOA estimation in unknown colored noise-fields using an imperfect estimate of the noise covariance ........ 890
Magnus Jansson, Karl Werner

# Table of Contents

## 22 - Special Session: Independent Component Analysis

**A Generalized Least Squares Approach to Blind Separation of Sources which have Variance Dependencies**
Aapo Hyvärinen, Yutaka Kano, Shohei Shimizu
806

**Asymptotic Performance of the FastICA Algorithm for Independent Component Analysis and Its Improvements**
Zbynek Koldovsky, Erkki Oja, Petr Tichavsky
947

**Efficient Variant of Algorithm FastICA for Independent Component Analysis Attaining the Cramer-Rao Lower Bound**
Zbynek Koldovsky, Petr Tichavsky
1013

**An LMS Viewpoint on the Local Stability of Second Order Blind Source Separation**
Julien Bourgeois
1025

**Bayesian noisy ICA for source switching environments**
Jun-ichiro Hirayama, Shin Ishii, Shin-ichi Maeda
1031

**On Approximate Joint "Biagonalization" - a Tool for Noisy Blind Source Separation**
Arie Yeredor
1037

**Non-negative Source Separation using the Maximum Likelihood Approach**
David Brie, Cédric Carteret, Saïd Moussaoui
1043

**Combined Non-Orthogonal Joint Zero-Diagonalization and Joint Diagonalization for Sources Separation**
Elmostafa Fadali, Eric Moreau, Nadege Thirion-Moreau
1049

**Separation of Polynomial Post Non-Linear Mixtures of Discrete Sources**
Boaz Lachover, Arie Yeredor
1055

**Shifted Non-Negative Matrix Factorisation for Sound Source Separation**
Eugene Coyle, Matt Cranitch, Derry FitzGerald
1061

**Generalized Contrast Functions for Blind Source Separation with Unknown Number of Sources**
Mohamed Sahmoudi
1066

## 23 - Special Session: Sensor Networks 1

**Cooperative Time-Reversal Communication in Wireless Sensor Networks**
Richard Barton, Ji Chen, Kyle Huang, Dagang Wu
1075

**Sensor Network Particle Filters: Motes as Particles**
Mark Coates, Garrick Ing
1081

**Sleeping policies for energy-efficient tracking in sensor networks**
Venugopal Veeravalli, Arun Visvanathan
1087

**A First Look at the Hidden Cost of Random Node Placement in Wireless Sensor Networks**
Jean-Francois Chamberland
1093

**On Optimal Parametric Field Estimation in Sensor Networks**
Hesham El-Gamal, Ke Liu, Akbar Sayeed
1098

**A Lower Bound to the AWGN Remote Rate-Distortion Function**
Michael Gastpar
1104

**Signal Reconstruction from Noisy Randomized Projections with Applications to Wireless Sensing**
Jarvis Haupt, Robert Nowak
1110

**Distributed Inference in Wireless Sensor Networks: Some Recent Results**
H. Vincent Poor
1116

**Distributed Tracking in Multi-hop Networks with Communication Delays and Packet Losses**
Murat Alanyali, Venkatesh Saligrama
1117

Table of Contents

Improved Synchronisation for Superimposed Training based Channel Estimation .............................................. 1242

On Superimposed-Training Power Allocation for Time-Varying Channel Estimation ...................................... 1248
Shuangchi He, Xiaohong Meng, Jitendra Tugnait

Performance Analysis of an MIMO Channel Estimator based on Superimposed Training and First-Order Statistics .................................................. 1254
Shuangchi He, Jitendra Tugnait

Recursive MMSE Estimation of Wireless Channels based on Training Data and Structured Correlation Learning .................................................. 1260
Gerald Matz

Optimal Training Designs for Bayesian Channel Estimators with Application in CDMA Systems .................. 1266
Anna Scaglione, Azadeh Vosoughi

Optimal Training for ML and LMMSE Channel Estimation in MIMO Systems .............................................. 1271
Geert Leus, Alle-Jan Van der Veen

Optimal Training for Affine-Precoded and Cyclic-Prefixed Block Transmissions ........................................ 1275
Mounir Ghogho, Ananthram Swami

Bandwidth and Power Efficiency Considerations for Optimal Training in OFDM ...................................... 1281
Ning Chen, Ananthram Swami, G. Tong Zhou

Extraction of attributes for visual object recognition and DNA microarray analysis .................................. 1287
Sébastien Gadat

27 - Special Session: Biomedical Signal Processing

An overview of the role of context-sensitive HMMs in the prediction of ncRNA genes .................................. 1295
P.P. Vaidyanathan, Byung-Jun Yoon

Level Set Estimation in Medical Imaging ........................................................................................................ 1301
Robert Nowak, Rebecca Willett

A Fourier Product Method for Detecting Approximate Tandem Repeats in DNA .................................. 1307
Vincent A. Emanuele II, Thao T. Tran, G. Tong Zhou

Constrained, Globally Optimal, Multi-Frame Motion Estimation ................................................................. 1313
Michael Elad, Sina Farsiu, Peyman Milanfar

Optimization Criteria for DNA Repair ........................................................................................................... 1319
Ronit Bustin, Hagit Messer-Yaron

Feature Extraction for DNA Base-Calling Using NNLS ............................................................................ 1325
Lucio Andrade-Cetto, Elias Manolakos

Probabilistic-based Circuit Design for Bio-medical Applications ............................................................. 1331
Jie Chen

Identifying Differentially Expressed Genes from Probe Level Intensities in Longitudinal Affymetrix Microarray Experiments .................................................. 1337
Alfred Hero, Dongxiao Zhu

28 - Plenary Sessions

Statistical Signal Processing for Automotive Safety Systems ........................................................................ 1345
Fredrik Gustafsson

Quasi-separability and hierarchical quasi-separability in stochastic signal processing ............................ 1353
Patrick Dewilde
