Proceedings of the Seventh European Conference on Underwater Acoustics
ECUA 2004

5 to 8 July 2004
Delft University of Technology
The Netherlands

Edited by
Dick G. Simons

TNO Physics and Electronics Laboratory
The Hague
The Netherlands

VOLUME I

Contents

Volume 1

Preface

SOUND PROPAGATION MODELLING .......................................................................................................................... 1

Plane wave reflection coefficient derived from spherical wave measurements ................................................. 3
  Chris Harrison and Peter Nielsen

Discrete transparent boundary conditions for wide angle parabolic equations:
  Fast calculation and approximation ................................................................................................................. 9
  M. Ehrhardt and A. Arnold

Investigating real time sonar performance predictions using Beowulf clustering ............................................. 15
  Charles Cartledge and James Morris

Real-time imaging sonar system using acoustic lens and its property with PE method ................................. 21
  Tatenobu Tsuchiya, Tetsuo Anada, Nobuyuki Endoh, Toshiaki Nakamura

Time-domain modelling of 2D wave propagation over a fractured sediment ................................................. 27
  B. Lombard and J. Piraux

A high frequency deterministic ray propagation model .................................................................................. 33
  L. Pautet and E. Pouliquen

Raytracing in the presence of an ice layer ......................................................................................................... 39
  K.T. Hjelmervik

A ranging comparison of two sonar systems ................................................................................................. 45
  J.H. DiBiase and G. Clifford Carter

Comparison of measured and modelled acoustic propagation loss in the Baltic Sea ..................................... 51
  F. Gerdes, H.-G. Hofmann and I. Nissen

3D Acoustical model applied for acoustic propagation in a narrow strait ..................................................... 57
  A.J.K. Jenssen, P.A. Brodtkorb and U.R. Kristiansen

Echo-to-reverberation enhancement using a time reversal mirror ................................................................. 63
  Hee-Chun Song, W.S. Hodgkiss, W.A. Kuperman, P. Roux, T. Akal, S. Kim
  G. Edelmann and M. Stevenson

Propagator matrix for plane wave reflection - poroelastic and elastic layered models ............................... 71
  M.S. Fokina, V.N. Fokin, J.M. Sabatier

Medium frequency sound propagation over complex Baltic bottoms .......................................................... 79
  J. Pihl, S. Ivansson and J. Schön

Semi-analytical modeling of reflected wave fields ......................................................................................... 85
  A.W.F. Volker and M.G. Ter Morshuizen
Long-range propagation of broadband sound pulses using a seismo-acoustic PE model

F. Sturm and P.-F. Piserchia

Time domain analysis of near-axial interference effects for long-range acoustic transmissions in the ocean

N.S. Grigorieva and G.M. Fridman

Concise representations of sonar impulses in sea-channels with application to reverberation from bottom and surface

X. Cristol and A. Gawel

Spirit® “In situ” use of hydroacoustic parameters for real time sound propagation modelling

D. Schneider and R. Meyer

Factorized expression of the reflection coefficient by a monoclinic plate immersed in water

O. Lenoir, L. Guénégou and J.L. Izbicki

PROPAGATION FLUCTUATIONS IN SHALLOW WATER: MODELLING AND EXPERIMENT

Acoustic evidence of near-surface convective plumes in the Arctic

Barry J. Uscinski

Effects of internal waves on acoustic propagation

G. Bouchage, P. Nielsen and E. Coelho

High frequency intensity fluctuations

S.D. Lutz, D.L. Bradley and R.L. Culver

Frequency and azimuth anomalies in sound propagation in presence of shallow water internal waves

M. Badiey, B. Katsnelson, J. Lynch, S. Pereselkov

ACOUSTICS OF THE SEA-AIR BOUNDARY

Time domain modelling of backscattering from an aggregate of bubble plumes beneath the sea surface including attenuation and dispersion effects

G.V. Norton and J.C. Novarini

Gauging the impact that time-evolving media and sea surfaces have on the reverberation spectrum

R.S. Keiffer

Effect of wind on long range propagation in shallow water

M.A. Ainslie

Volume absorption and volume reverberation due to microbubbles and suspended particles in a ray-based sonar performance model

S.D. Richards, P.R. White and T.G. Leighton
The effects of fluctuating spatial structures in bubble clouds on the statistics of acoustic propagation
T.C. Weber, A.P. Lyons and D.L. Bradley

Sonic booms in shallow water: The influence of the seabed
David M.F. Chapman and Oleg A. Godin

Sonic boom penetration under a wavy air-sea interface
H.K. Cheng, Adam Fincham, John R. Edwards, C.J. Lee and T. Maxworthy

Resonant scattering from a chain of air bubbles in water
A. Nikolovska, A. Ooi, R. Widjaja and R. Manasseh

The possibility and exploitation of nonlinear effects in the near-surface oceanic bubble layer
T.G. Leighton, H.A. Dumbrell, G.J. Heald and P.R. White

Laboratory modeling of the sound scattering by 2D and 3D stratified wakes
V.E. Prokhorov

Simultaneous measurements of the fraction of sea surface covered by whitecaps, the noise spectral parameters and the energy of breaking waves-experimental study
Jaroslaw Tegowski and Marcin Wichorowski

Exploitation of higher order statistics to compute bubble cloud densities; Evading Olber's Paradox
P.R. White, T.G. Leighton and G.T. Yim

Ocean acoustic tomography in the western Mediterranean Sea
E.K. Skarsoulis, U. Send and G. Piperakis

Motion estimation of underwater mobiles in a multipath channel using polynomial phase signal modeling
C. Ioana, A. Quinquis, C. Gervaise, J.-C. Le Gac

Derivation of the adjoint of a wide angle parabolic equation for acoustic inversion
M. Meyer, J.-P. Hermand, M. Asch

Research on acoustic positioning and estimation of sound velocity profile using time reversal waves
Takuya Shimura

Sagitta setosa: Identification and diel vertical migration as inferred acoustically in the Black Sea
Erhan Mutlu

Posterior estimation of transmission loss from ocean acoustic data
Peter Gerstoft, Chen-Fen Huang, W.S. Hodgkiss and Peter Nielsen
Acoustic oceanographic buoy testing during the MREA '03 sea trial ........................................ 271
C. Soares, S.M. Jesus, A.J. Silva and E. Coelho

Real-time weather monitoring using underwater acoustics ....................................................... 281

A multi-frequency acoustical approach to retrieve range dependent ocean current ..................... 287
I. Esipov, I. Puks, K. Naugolnykh, M Charnotskii, V. Gostev and O. Popov

REVERBERATION AND SCATTERING ................................................................. 293

The effect of multipath on reverberation envelope statistics ....................................................... 295
Douglas A. Abraham, Anthony P. Lyons and Kyle M. Becker

Reverberation model validation using measured data ............................................................... 301
M.K. Prior

Predicting near-surface scattering statistics using the Poisson-Rayleigh model ......................... 307
J.M. Fialkowski, R.C. Gauss and D.M. Drumheller

Modelling the pressure fluctuations of a shallow-water reverberant field ................................ 313
R.D. Hollett and E. Pouliquet

Acoustic scattering properties of freshwater invertebrates ..................................................... 319
J. Frouzová, J. Kubečka and J. Matěna

Long-term scattering variability in Svalbard Archipelago and Baltic Sea ................................ 325
Joanna Szczucka

Wave theoretic estimation of bistatic scattering and clutter for the Malta Plateau shallow water environment ................................................................. 331
K.D. LePage

Coherent effects in scattering and reverberation in shallow water waveguides in the presence of environmental uncertainty ......................................................... 337
K.D. LePage and B.E. McDonald

Frequency-shift models for surface and fish backscattering .................................................... 343
R.C. Gauss and E.I. Thorsos

SCATTERING FROM MARINE ORGANISMS ..................................................... 349

High-frequency acoustic volume backscatter in the upper water column:
Imaging zooplankton and oceanic microstructure .............................................................. 351
A.C. Lavery, M.C. Benfield, P.H. Wiebe and T.K. Stanton

Echo interference in acoustic backscattering by densely aggregated targets ............................ 361
N. Gorska and D. Chu
On backscattering mechanism for fish without swimbladder ........................................ 367
N. Gorska, E. Ona and R. Korneliussen

Recognition of underwater vegetation species in the Baltic Sea .................................... 373
D. Faghani, J. Tegowski, N. Gorska, Z. Klusek

On the possibility of estimating fish length distribution from its target strength statistics .......... 379
M. Moszynski and A. Stepnowski

Scattering studies of the marine organisms behaviour in the Baltic Sea................................. 385
Joanna Szczucka

4D scattering patterns of pelagic fish in the Baltic ........................................................... 391
A. Orlowski

Three dimensional morphometry of fish body structure by X-ray CT and numerically 
estimated acoustic scattering of marine organism by the boudary element method ................. 397
Tsuyoshi Okumura

Anatomy of fish-swimbladder acoustic resonances at high frequencies ............................... 403
D.T.I. Francis and K.G. Foote

Acoustical estimations confirm analytical model assessments of herring stock in the 
Gulf of Riga ...................................................................................................................... 409
O. Kaljuste, T. Raid, F. Shvetsov, G. Strods

TARGET SCATTERING: MODELLING AND EXPERIMENTS ............................................. 415

A finite-element model for 3-D scattering from elastic objects in shallow water ................. 417
Mario Zampolli and David S. Burnett

A unified continuum mechanics approach for structural acoustic finite-element 
modeling of target scattering ......................................................................................... 423
David S. Burnett and Mario Zampolli

Verification of a 3-D structural-acoustic finite-element tool against thin-shell scattering 
models ............................................................................................................................ 431
A. Tesei, M. Zampolli, J. Fawcett and D.S. Burnett

Thin-shell approximations for computation of scattering from a fluid body with an elastic 
cover .................................................................................................................................. 437
S. Ivansson and I. Karasalo

Coherent target scattering in the active sonar performance model ALMOST/REACT .......... 443
P. Schippers

Transient scattering from submerged and buried objects ....................................................... 451
I. Karasalo and P. Skogqvist

Effects of stiffeners on the acoustic scattering from a finite cylindrical shell ....................... 457
R. Lietard, D. Décultot, M. Tran-Van-Nhieu and G. Maze
Experimental and theoretical studies of scattering by partially fluid-filled cylindrical shells .......................... 463
V.F. Humphrey, N. Jayasundere, M. Dench and P.A. Chinnery

Multiple-aspect imaging of seafloor targets-analyses of tank experiment datasets ........................................ 469
P.F. Dobbins, N. Jayasundere and Ph. Blondel

Bistatic scattering from buried targets in shallow water - experiment and modeling ........................................... 475
H. Schmidt, I. Veljkovic, M. Zampolli

Detection of a partially buried object using a time-reversal technique .......................................................... 483
E. Poulquen, L. Pautet, F. Guerrini, A.P. Lyons, A Tesei

Methodologies for extracting the spatially semi-coherent components of the scattering response from buried symmetric targets ................................................................. 489
I.P. Kirsteins, A. Tesei and R. Lim

Scattering from proud and buried spherical targets in the time domain .......................................................... 497
J. Ehrlich, Ch. Fiedler, H. Peine

AMBIENT NOISE MODELLING AND INVERSION .................................................................................................. 503

Ambient noise inversion with an energy flux model ........................................................................................... 505
F. Desharnais, D.J. Thomson, C. Weatherbee and C.A. Gillard

Geoacoustic inversion of ambient noise reflection-loss data ............................................................................... 511
J. Dettmer, S.E. Dosso, M.K. Prior, C.H. Harrison and N.R. Chapman

Measuring seabed reflection loss from ambient noise:
An experiment in the north-west approaches to the UK ..................................................................................... 517
Marcus Donnelly

Sub-bottom profiling with ambient noise ........................................................................................................ 523
Chris Harrison

Rapid environmental assessment with ambient noise ......................................................................................... 529
M.J. Buckingham

Numerical simulation of noise generated by impacting cylindrical water jets .................................................... 537
X.M. Chen, S.I. Means, J.C.W. Rogers and W.G. Szymczak

Sound intensity of noise produced by a moving ship ..................................................................................... 543
Ignacy Gloza and Grazyna Grelowska

Vessel underwater acoustic noise ................................................................................................................... 551
K. Ugrinovic
Scattering from rough surfaces in shallow water propagation ........................................ 559
   E.I. Thorsos, W.T. Elam, E.S. Henyey, S.A. Reynolds and K.L. Williams

Surface waves in partially saturated porous media ..................................................... 565
   G. Chao, D.M.J. Smeulders and M.E.H. van Dongen

On the local nature of the reflection of acoustic waves from a two-layered
sea floor with oblique interface. Part I: Theoretical considerations ................................ 571
   Panagiotis Papadakis, Augustin Aubret and Julien Clerget

On the local nature of the reflection of acoustic waves from a two-layered
sea floor with oblique interface. Part II. Experimental validation .................................... 577
   Panagiotis Papadakis, Jean Pierre Sessarego and Patrich Sanchez

Temporal variability of seafloor roughness and its impact on acoustic scattering ................. 583
   E. Pouliquen, G. Canepa, L. Pautet, A.P. Lyons

Seafloor backscattering: Numerical simulation vs. filter theory approach .......................... 589
   A. Zielinski, Z. Lubniewski and J. Tegowski

Bistatic scattering from the seabed at high frequency ................................................ 595
   G. Canepa, E. Pouliquen, L. Pautet and N.G. Pace

Numerical analysis of pulse waveform reflected from sea bottom with transition
layer in shallow water using by FDTD method .......................................................... 601
   T. Tsuchiya, T. Anada and N. Endoh

Bottom scattering of low-frequency sound waves in shallow water:
Computer simulation ........................................................................................................ 607
   V.G. Petnikov, V.A. Grigor’ev, V.M. Kuzkin

Very high frequency backscatter from a rough sediment .............................................. 613
   R.J. Brothers, G. Robb, T.G. Leighton, G.J. Heald, P.R. White and J.K. Dix

Application of Bayes theorem to the estimation of bottom scattering parameters and bottom
scattering strength uncertainty based on in-situ measurements in littoral environments ........ 619
   K.D. LePage and C.W. Holland

Scattering from discrete inclusions in marine sediments .............................................. 625
   Anatoliy N. Ivakin
Geoacoustic inversion for sediment sound speed and attenuation in the Florida Straits

N. Ross Chapman and Yongmin Jiang

Acoustic signal representation by the statistical distribution of the wavelet subband coefficients for tomographic inversion

M. Taroudakis and G. Tzagkarakis

Experimental results on guided waves in water-saturated porous reservoirs

G. Chao, H.H.G. Hansen, D.M.J. Smeulders and M.E.H. van Dongen
