CONTENTS

PLENARY PAPERS

Control systems for pulp and paper production — Challenges and next steps
Aif Isaksson, ABB AB, Hans–Jürgen Weidemann, ABB Corporation 13

Control systems in pulp and paper: The industry perspective
Markku Karlsson, UPM-Kymmene 21

Control systems in pulp and paper: The research perspective
Guy Dumont, University of British Columbia 23

MODELING AND SIMULATION

Online decision support and optimization for kraft paper production
Håkan Fridén, Henrik Näslund, Mid Sweden University, Andreas Stattin,
Göran Löfgren, Mondi Packaging 25

Model-based estimation of microbial state in paper mill broke tower
Katja Koivuniemi, Risto Ritala, Tampere University of Technology 31

On-line wet-end optimisation through artificial neural networks
A. Alonso, A. Blanco, C. Negro, J. Tijero, Complutense University of Madrid,
I. San Pio, Holmen Paper Madrid 37

CONTROL APPLICATIONS

Studying broke tank averaging level control with stochastic simulator
Elina Pajula, Matti Tienari, Oy Keskus laboratorio KCL 43

A novel approach to online pH control
Matthew Taylor, Graham Toft, Iggesund Paperboard, Hong Wang, The University of Manchester 49

Multivariable predictive grade change controller
Risto Kuusisto, Seyhan Nuyan, Metso Automation Inc., Antti Kaunonen, Tampere University of Technology 55

MONITORING AND DIAGNOSTICS

Philosophy of science tackles fluctuation at board mill
Olli Saarela, KCL 61

On-line performance monitoring in process analysis
Antti Nissinen, Seyhan Nuyan, Pasi Virtanen, Metso Automation Inc. 67

On-line soft sensors and measuring point diagnostics through state estimation
Lars Ledung, Jens Pettersson, Xiaojing Zhang, ABB AB, Stefan Ragnarsson, Billerud AB Gruvöns Bruk 73
OPTIMIZATION AND DECISION SUPPORT

Decision support system: Broke ratio management and pulp composition stability
Jean Ruiz, Pascal Ottenio, Centre technique du Papier 79

Joint scheduling of TMP and paper production under uncertainty
Petteri Pulkkinnen, Risto Ritala, Tampere University of Technology 85

Decision support for pulp mill operations based on large-scale on-line optimization
Jens Pettersson, Lars Ledung, Xiaojing Zhang, ABB Corporate Research 91

INFRASTRUCTURE

Results through automation: Streamlining operations and maintenance processes
Harri Happonen, Ville Hietanen, Mats Friman, Timo Harju, Teemu Kiviniemi, Metso Automation Inc. 97

Combined soft sensors and intelligent control in pulp and paper industry
Esko K. Juuso, University of Oulu 103

MODELING AND SIMULATION, PULPING

Modelling and control of a dry black liquor gasification process
Erik Dahlquist, Mälardalens University 109

Detecting the inherent operating limitations of a TMP-refining process
Ilich Lama, Michel Perrier, Paul Stuart, École Polytechnique de Montreal 115

Improvement and prediction of kraft pulp yield using a wood chip quality online measurement system (CMSE)
Feng Ding, Centre de Recherche Industrielle du Québec, Karine Vézina, Cascades Inc. 123

CONTROL APPLICATIONS, PULPING 1

Plantwide optimization of a pulp mill process
Mehmet Mercangöz, Francis J. Doyle III, University of California 129

Kappa number prediction with neural networks
Kauko Leiviskä, University of Oulu 135

Model-based control of concentration profile with impedance tomographic measurements
Anna R. Ruuskanen, Jari P. Kaipio, University of Kuopio 141

CONTROL APPLICATIONS, PULPING 2

Measurement and control strategies for bleaching
Markus Dinkel, Gebr. Lang GmbH Papierfabrik, Klaus Villforth, Darmstadt University of Technology, Volkmar Mickal, Albrecht Sieber, Siemens AG 147

Control and optimization of hydrosulphite brightening for a three-addition point process
Danielle Major, Olga Bogomolova, Michel Perrier, École Polytechnique de Montréal, Sylvain Gendron, Paprican, Bernard Lupien, Papier Masson Ltée 155

On-line quality control to improve runnability and quality of TMP refiner line
Marko Loisa, Tampere University of Technology 161
CONTROL PERFORMANCE

Control performance assessment of continuous pulp digester
Ari Koponen, Riku Pöllänen, Olli Pyrhönen, Lappeenranta University of Technology, Hannu Sonni, Heikki Kangas, Juha Oksanen, Stora Enso Packaging Boards 167

Monitoring the control loop performance at large scale industrial processes
Ville Hietanen, Jani Honga, Pekka Kangas, Timo Harju, Harri Happonen, Metso Automation 173

CD CONTROL 1

Why and when is cross directional control needed?
Mats Hiertner, Stora Enso 179

Numerical design of robust cross-directional control with saturating actuators
Rafael M. Morales, William P. Heath, University of Manchester 185

Bayesian methods for system identification in cross-directional control
Andrew Taylor, Stephen Duncan, University of Oxford 191

CD CONTROL 2

Actuator mapping and stability in real-life cross-directional control systems
Andrew Taylor, Stephen Duncan, University of Oxford 197

An online non-intrusive method for alignment between actuators and their response centers
Bhushan Gopaluni, Fazel Farahmand, Guy Dumont, Michael Davies, Philip Loewen, University of British Columbia 203

Autonomous alignment of CD control on paper machines
Fazel Farahmand, Bhushan Gopaluni, Guy Dumont, Michael Davies, Philip Loewen, University of British Columbia 209

CD CONTROL 3

Multivariable CD control and tools for control performance improvement
Calvin Fu, Jarmo Ollanketo, Jukka Mäkinen, Metso Automation 215

Automated tuning of multiple array cross-directional model predictive controllers
Junqiang Fan, Gregory E. Stewart, Bijan Nazem, Cristian Gheorghe, Honeywell Automation and Control Solutions 221

New concepts of cross directional control: Application of finite settling response method and closed loop identification of mapping
Takashi Sasaki, Yokogawa Electric Corporation 227

Troubleshooting papermachine issues with the informetric systems RQMS profile historian
Ian Journeaux, Fay Saydjari, Stora Enso North America, David Miller, Informetric Systems 233
