CONTENTS

PREFACE

PLENARY LECTURES
Simulation, applications and tools in metals extraction
Pekka Taskinen, Jussi Vaamo, Björn Saxen

Simulation, a pulp and paper perspective
Larry S. Wasik

Dynamic simulators for process control and optimization as well as for operator training in pulp and paper industry
Erik Dahlquist, Fredrik Wallin, Hakan Ekwall

MODELLING AND SIMULATION TOOLS AND TECHNOLOGY
Modelling tools and methods
Approaches to energy system modeling
Brian Elmegaard, Arne Jakobsen

Dimensionality reduction for classification tasks modelling
Seppo Puuronen, David Patterson, Alexey Tsymbal, Mykola Pechenizkiy

On emergent models and optimization of parameters
Heikki Hyötyniemi

DAE formulations of gas pipe models
Astrid Carlson, Bernt Lie

Incremental declaration handling in Open Source Modelica
Peter Aronsson, Peter Fritzson, Levon Saldamli, Peter Bunus

Towards new languages for systems modeling
Heikki Hyötyniemi

NUMERICAL METHODS FOR SIMULATION AND DISTRIBUTED SIMULATION SYSTEMS
Distributed and parallel simulation
Distributed simulation environment for heterogeneous computer clusters
Vadim Engelson, Peter Fritzson

Design and implementation of an OPC server for connecting a process simulator
José Macías Hernández, Josep Anton Feliu

Exploring Internet for process modeling opportunities
Manel Serra, Daniel Piñol, Peter Svahn, Julià Sempere
Agent-oriented modelling and simulation of a ceramic factory
Kuldar Taveter, Reet Hääl

Integrating a simulation model to other IT systems
Heikki Aalto

The next level of simulations: Extreme computing
Anne C. Elster

TRAINING SIMULATORS AND INDUSTRIAL APPLICATIONS
Training and real-time simulation

Experiences of using animations in education of electric circuits at University of Vaasa
Timo Vekara, Maarit Vesapuisto, Juha Kallunki

Real time simulation and measurement environment of DC converters for educational purposes
Hannu Sarén, Asko Parviainen

Generic training simulator for a combined cycle gas turbine power plant
Toni Ollikainen, Ari Heino, Kari Porkholm

A rotary dryer simulation through the WWW
Juha Lindfors

A web-based dynamic simulator for applications in process industry and for education
Fredrik Wallin, Erik Dahlquist

Simulation in pulp and paper industry

New tools to improve production/cost and investment efficiency by using simulation and modelling
Sivert Westergård

Model for oxygen delignification of kraft pulp
Jukka Pigg, Sami Tuuri, Kaj Juslin

Simulations of stock fractions with a dynamic paper machine simulator
Timo Yli-Fossi, Mika Kosonen, Mikko Toivonen, Ilkka Karaila, Pentti Lautala, Taisto Huhtelin

Simulation of web break sensitivity
Timo Ahola, Henri Kumpula, Esko Juuso

Simulation in mechanical engineering

Simulation of multi-body dynamics in real time
Pasi Korkealaakso, Asko Rouvinen
An approach to validation of industrial automation systems combining formal verification and simulation
Valeriy Vyatkin, Hans-Michael Hanisch, Jose L. Martinez Lastra, Reijo Tuokko

INDUSTRIAL APPLICATIONS
Simulation in metallurgical industry

Simulating the transportation of melts in Steel Melting Shop
Aki Ruotsalainen, Jyrki Pitkälä

Adaptive modeling with linguistic equation in process development phase. Case study: Co removal process at Outokumpu Kokkola Zinc Plant
Jari Näsi

A user-friendly tool for large-scale entity simulations in the process industry
Mikko Angerman, Markus Harju, Paul Fedory

Numerical simulation of continuous casting
Sami Vapalahti, Seppo Louhenkilpi, Tuomo Räisänen, Jyrki Miettinen, Matti Sirviö

Heuristic tool for combination of jobs and planning of casting in the steel plant
Mats Nikus, Christian Hjulfors, Henrik Saxén, Frank Pettersson

Simulation in energy sector

Modelling of boiler heating surfaces and evaporator circuits
Kim Sørensen, Thomas Condra, Niels Houbak

Simulation in chemical industry

Modelling and simulation of a fluidised bed granulation process
Timo Mäki

Intelligent water quality indicator for chemical water treatment unit
Iliris Ainali, Marjatta Piironen, Esko Juuso

Simulation in biological and environmental engineering

Simulating willow productivity based on radiation use efficiency, shoot mortality and shoot age
Angela Noronha Sannervik, Henrik Eckersten, Theo Verwijst, Nils-Erik Nordh

Simulation in electronic systems

Simulation and control design of tracking loops
R. Ylinen, M. Kiviahde, J. Mannermaa

Modelling radiation processes for evolutionary antenna design
Jarmo T. Alander, Lyudmila A. Zinchenko, Sergey N. Sorokin, Maxim P. Oleynik
