Proceedings of the Symposium on Vulnerability and Survivability

Volume I
(UNCLASSIFIED)

21 - 23 OCTOBER 1975

at the

NAVAL AMPHIBIOUS BASE
Coronado, California

Compiled by
Loula Zernow
Shock Hydrodynamics Division
Whittaker Corporation

Sponsored by the
BALLISTICS AND VULNERABILITY DIVISION
WEAPONS TECHNOLOGY GROUP
AMERICAN DEFENSE PREPAREDNESS ASSOCIATION

National Headquarters: Union Trust Building
Washington, D.C. 20005
TABLE OF CONTENTS

SESSION I: METHODOLOGY

Methods of Assessing Anti-Armor Weapons Lethality ................................................. 1-1
  - Bradshaw F. Armendt, Jr. and Thomas F. Hafer

ENDGAME — A New Computer Program for Predicting Air-Target Survivability to Advanced Warhead Systems ................................................................. 1-17
  - John J. Flowers

Computerized Survivability and Vulnerability Assessment for the Armored Vehicle Designer ................................................................. 1-33
  - James J. Piechocki and Brian Bonkosky

Analysis of the Effectiveness of Aircraft Survivability Equipments for U.S. Army Aircraft ............................................................................................ 1-57
  - H. E. Criel

A Confidence Determination for Aircraft Vulnerable Areas ........................................... 1-73
  - 1 LT George C. Capillo

Alternate Papers *

Effects of "G" Loading on Aircraft Vulnerability
  - E. S. Grubin, C. R. Hoggatt, R. F. Recht, D. K. Rolens

A Basic Target Vulnerability Handbook
  - W. E. Baker

Design Option Decision Tree: An Alternate Method for Assessing Aircraft Survivability-Vulnerability
  - Kenneth D. Korkan and George W. Watts, Chas. N. Eastlake, III

A Method of Flowcharting and Documenting Computer Programs for the Non-Programmer
  - Norman K. Bodenstein

Response of Dry, Metallic Aircraft Wing Compartments to Internal Blasts
  - Marcus J. Jacobson and Jun R. Yamane

Failure Analysis by Statistical Techniques (FAST) Applied to Target Vulnerability/Survivability Assessment
  - W. H. Rowan

Quick and "Not-So-Dirty" Methods for Decision-Making on Design Options for Survivability
  - Arthur Stein

*Alternate papers are listed in the table of contents for reference only; they have not been included in this publication. They will be published elsewhere.
SESSION II: SURFACE TARGETS (A)

Simulated Ballistic Impact on the J 65-W-16A Engine Combustor at Sea Level Static Conditions
- Russell W. Vizzini

Vulnerability Reduction of Electronic Systems
- Charles S. Goldy, Jr.

Alternate Papers

HELBAT Field Artillery Test (HELBAT 4 and 5)
- Michael D. Langan

An Empirically Based Scheme for Prediction of Some Characteristics of Behind-Armor Spall
- Ann Sutphin Hafer

SESSION III: SURFACE TARGETS (B)

Vulnerability and Survivability of Fuel Cells in Armored Ground Combat Vehicles and Aircraft
- Dr. James T. Dehn

Camouflage
- H. R. Atkinson

The Vulnerability of Selected U.S. Artillery Weapons to Fragment Attack
- Thomas F. Hafer

Interior Ballistics of Damaged Gun Tubes
- Carl R. Ruth and Paul G. Baer

SESSION IV: PERSONNEL

An Engineering Approach to the Assessment of Personnel Vulnerability
- William Kokinakis and William J. Bruchey, Jr.

The Sensitivity of the BRL Personnel Armor Penetration Model to Simulator Shape and Its Effect on Casualty Reduction
- Louise Dusablon Kokinakis

Technical Development of Army Aircraft Crashworthy Subsystems
- Joseph P. Poynton, James C. Butler and Daniel L. Sabo
SESSION IV: PERSONNEL

Alternate Papers

Application of PLZT To the Aircrew Protection Problem of Thermally Hardened Aircraft
- Maj. Harold E. Meisterling and Mr. Joseph S. Edwards

SESSION V: LASERS

Vulnerability of U.S. Aircraft to a High Energy Laser Threat
- Major Neil W. Godsey

SESSION VI: NUCLEAR

Vulnerability and Hardening of Command, Control and Communication Shelter Systems

A Self Triggered Circumvention Technique for Nuclear Survivability
- R.J. Hendrickson and E. Van Keuren

Helicopter Blast Test Results From the Pre-Mine Throw IV Event
- Garabed Zartarian and Robert Mayerhofer

Alternate Papers

Dynamic Response of a Truck-Shelter-Rack System to a Nuclear Blast Wave
- Yau Wu and J. P. Walsh

Available Computer Codes and Data for Radiation Transport Analysis
- D.K. Trubey, Betty F. Maskewitz and R.W. Roussin

Computer Codes for Prediction of Fallout From Nuclear Detonations
- Joseph C. Maloney
SESSION VII: AERIAL TARGETS (A)

Evolution of the Helicopter and Its Vulnerability .......................... 7-1
    - Roland G. Bernier

Weapons System Acquisition Life Cycle Survivability ......................... 7-11
    - R. H. Carlson

The YAH-63 Advanced Attack Helicopter—Designed for Survivability ............ 7-23
    - J. N. Fischer

The Hughes YAH-64 Designed and Tested for Performance and Survivability .... 7-41
    - Edward P. Preisendorfer and Albert C. Edwards

T700 Vulnerability ............................................................. 7-55
    - Edwin L. Richardson

Application of Designs to Improve Aircraft Flight Control Survivability ........ 7-65
    - Frederick R. Taylor and John Schonowski

Alternate Papers

Technical Considerations in the Development of a Semi-Rigid Void Space Ballistics Foam
    - R. H. Fish and D. Patterson

SESSION VIII: AERIAL TARGETS (B)

The Interactions Between Aircraft Structural Integrity and Structural Vulnerability ........................................ 8-1
    - John G. Avery

Modeling and Verification of Dynamic Aircraft Fuel Tank Environments and Vulnerability ................................ 8-19
    - Gregory W. Gandee and Levelle Mahood

Reduction of Army Helicopter Fuel Tank Vulnerability to 23MM HEI-T Projectile Impact ............................. 8-37
    - Patrick H. Zabel

Advances in Ceramic Composite Armor Technology ................................ 8-65
    - Paul B. Gardner

Multiple Fragment Impact Effects on the Vulnerability of Aircraft Wings .......... 8-79
    - Richard F. Meissner

Target Vulnerability Aspects of Anti-Ship Missile Defense ...................... 8-101
    - Thomas H. McCants, Jr.
SESSION VIII: AERIAL TARGETS (B)

Alternate Papers

Design Support Ballistic Tests of Simulated Tail Rotor Drive Shaft
   – Robert E. Rohtert

Material Removal Model for Aircraft Vulnerability Analyses
   – John H. Kineke, Jr.
