SEG International Exposition and 76th Annual Meeting
2006
SEG New Orleans

October 1-6, 2006
New Orleans, Louisiana, USA

Volume 5 of 6
Volume 5

Seismic Modeling of Compositional and Geochemical Effects in CO2 Sequestration .......................................................... 2385
    Ravi Shekhar, Richard L. Gibson Jr, Ajitabh Kumar, Akhil Datta-Gupta

Identification of Low Velocity and High Attenuation Zones in Synthetic Seismic Spectra .................................................. 2390
    Marc Lambert, Reto Holzner, Stefan Schmalholz, Yuri Podladchikov

First-order Perturbations of the Seismic Response of Fluid-filled Stratified Porous Elastic Media ........................................ 2395
    Louis de Barros, Michel Dietrich

2.5D Anisotropic Elastic Finite-difference Modeling ................................................. 2401
    Francisco Silva Neto, Jessie Costa, Amelia Novais

The Computation of Traveltimes When Assuming Locally Circular Or Spherical Wavefronts .................................................. 2406
    John C. Bancroft, Xiang Du

Seismic Imaging in the Curvelet Domain and Its Implications for the Curvelet Design .......................................................... 2411
    Herve Chaurs

Two-way Versus One-way: A Case Study Style Comparison ........................................ 2416
    J. Bee Bednar, Chris J. Bednar, Changsoo Shin

Imaging Taglu: Anisotropic PSDM in a Permafrost Environment .................................................. 2421
    Marko Mah, Scott Cheadle, George Reed, Parsons Chang

Practical Aspects of Parsimonious Migration for Velocity Tomography .................. 2425
    Weihong Fei, Young Kim

Adaptive Subtraction of Free Surface Multiples Through Order-by-order Prediction, Matching Filters, and Independent Component Analysis .................................................. 2430
    Sam T. Kaplan, Kristopher A. Innanen

Nonorthogonal Riemannian Wavefield Extrapolation ................................................. 2435
    Jeff Shragge

Time-shift Imaging Condition for Converted Waves ................................................. 2440
    Paul Sava, Sergey Fomel

Hybrid Fourier Finite-difference 3D Prestack Depth Migration for VTI Media ................ 2445
    Tong W. Fei, Christopher L. Liner

Illumination, Resolution, and Incidence-angle in PSDM: A Tutorial ......................... 2450
    Isabelle Lecomte

Gaussian-beam Kirchhoff Prestack Depth Migration ................................................. 2455
    Carlos A. S. Ferreira, Joao C. R. Cruz

Three-dimensional Wave-equation Depth Migration by a Direct Solution Method ........ 2460
    Dan Kosloff, Hillel Tal-Ezer, Allon Bartana, Evgeny Ragoza, Andrei Shabelansky

Robust Imaging Condition for Shot-profile Migration ................................................. 2464
    Antoine Guittton, Alejandro Valenciano, Dimitri Bevc

Least-squares Attenuation of Reverse-time Migration Artifacts ............................... 2469
    Antoine Guittton, Bruno Kaelin, Biondo Biondi

Stabilizing Explicit Frequency-space Migration Using Local WKBJ Operators ............. 2474
    Chad M. Hogan, Gary F. Margrave
An Output Imaging Scheme of the Common Reflection Surface Stack: Applications to Real Data
Kai Yang, Hua-Zhong Wang, Liang-Guo Dong, Shi-Yong Xu

3D Prestack Depth Migration by Hybrid Method
Wensheng Zhang, Guanquan Zhang

Prestack Gaussian-beam Depth Migration in Anisotropic Media
Tianfei Zhu, Sam Gray, Daoliu Wang

Specular Beam Migration - A Low Cost 3D Prestack Depth Migration
Ian Cockshott

Offset-domain LCB Beamlet Prestack Depth Migration
Mingqiu Luo, Shengwen Jin

Subsalt Velocity Analysis by Combining Wave-equation-based Redatuming and Kirchhoff-based Migration Velocity Analysis
Bin Wang, Francois Audebert, Dan Wheaton, Volker Dirks

Explicit High-order Reverse Time Prestack Depth Migration
Matthew H. Karazincir, Clive M. Gerrard

Separation of Focusing and Positioning Effects Using Wave Equation-based Focusing Analysis and Poststack Modeling
Bin Wang, Dan Wheaton, Francois Audebert, Volker Dirks

Wave-equation Migration of Turning Waves
Shiyong Xu, Shengwen Jin

One-return Wave-equation Migration: Imaging of Duplex Waves
Shengwen Jin, Shiyong Xu, David Walraven

Decomposition of P- and S-Waves Using Dispersion Relationship and Imaging
Hiroyuki Tokunaga, Hitoshi Mikada, Yoshinori Sanada, Yuzuru Ashida

Velocity Determination by Image-wave Remigration
Amelia Novais, Joerg Schleicher, Jesse Costa

DSR-equation Prestack Tau Migration in Heterogeneous Media
Jiubing Cheng, Jianhua Geng, Huazhong Wang, Zaltian Ma

Imaging Steep Salt Flank with Plane-wave Migration in Tilted Coordinates
Guojian Shan, Biondo Biondi

Optimized Implicit Finite-difference Migration for VTI Media
Guojian Shan

A Depth-migration Method Based on the Full-wave Reverse-time Calculation and Local One-way Propagation
Xiao-Bi Xie, Ru-Shan Wu

3D Focusing Transformation: Reliable Tool for Imaging of Scattering Objects
V. A. Pozdnyakov, V. Tcheverda

Optimizing the FOCI Algorithm with a Weighted Least-squares Approach
Saleh Al-Saleh, Gary Margrave

Explicit Wavefield Extrapolation Directly from Topography
Saleh M. Al-Saleh, Gary F. Margrave, John C. Bancroft

Traveltime-based True-amplitude Migration in Anisotropic Media
Claudia Vanelle, Dirk Gajewski
Residual Migration-velocity Analysis Using Common-angle Image Gathers .......................... 2680
Fan Xia, Yiqing Ren, Shengwen Jin

Study of the Influence of Propagator Amplitude Correction on Image Amplitude Using Beamlet Propagator with Local WKBJ Approximation .......................................................... 2685
Jun Cao, Ru-Shan Wu

Separation and Imaging of Seismic Diffractions Using Plane-wave Decomposition ............. 2691
M. Turhan Tener, Sergey Fomel, Evgeny Landa

Elastic Migration in the Angle-azimuth Domain: Application to a Seabed Node Experiment ............................................................................................................................ 2696
L. Nicoletis, P. Froidevaux, O. Bouhdiche, France M. Mendes

Simulated Migration Amplitudes of Converted Waves: First Results .................................. 2701
Tina Kaschwich, Joachim Mispel

Seismic Depth Imaging with the Gabor Transform .............................................................. 2706
Yongwang Ma, Gary F. Margrave

Depth Mapping of Stacked Amplitudes Along an Attribute Based ZO Stacking Operator ................................................................. 2711
G. Garabito, J. C. R. Cruz, S. L. F da Luz

Migration Deconvolution Applied to Marine Seismic Data from Campeche Bay, Gulf of Mexico .............................................................. 2717
Guoan Luo, Sergio Chavez-Perez

Designing Stable Operators for Explicit Depth Extrapolation of 3D Wavefields Using Projections Onto Convex Sets ......................................................... 2722
W. A. Mousa, S. Boussakta, M. Van der Baan, D. C. McLemon

Implementation of 3D Wavefield Extrapolation Using Singular Value Decomposition ........ 2727
W. A. Mousa, S. Boussakta, D. C. McLemon, M. Van der Baan

Continuation of a Class of Seismic Processors and Associated Rays ............................... 2732
Anton A. Duchkov, Maarten V. de Hoop, Sergey Fomel

Refraction Migration: Imaging Multiple Refractors Automatically .................................. 2737
Jie Zhang

Surface Multiple Attenuation in Shallow Water and the Construction of Primaries from Multiples ........................................................................................................... 2741
Neil Hargreaves

Seismic Multiple Prediction Through Inversion for Real Data Application .......................... 2746
Yanhua Wang

Residual Moveout of 2D Multiples in Angle-domain Common-image Gathers ...................... 2751
Gabriel Alvarez

Mapping of Specularly Reflected Multiples to Image Space: An Example with 3D Synthetic Data .................................................................................................................. 2756
Gabriel Alvarez, Biondo Blondi

Virtual Source Gathers and Attenuation of Free-surface Multiples Using OBC Data: Implementation Issues and a Case Study ................................................................. 2761
Kurang Mehta, Roel Snelder, Rodney Calvert, Jonathan Shaiman

Predicting and Removing Complex 3D Surface Multiples with Worn Modeling - an Alternative to 3D Srme for Wide-azimuth Surveys? ......................................................... 2767
Christof Stork, Jerry Kapoor, Wei Zhao, Bill Dragoset, Ken Dingwall
Fast Free-surface Multiple Attenuation Work-flow for 3D OBS Data .................................................. 2772
Barbel Traub, Anh Kiet Nguyen, Matthias Riede

3D SRME on OBS Data Using Waveform Multiple Modeling ................................................................. 2777
A. Pica, M. Manin, P. Y. Granger, D. Marin, E. Suaudeau, B. David, G. Poulain, P. Herrmann

Application of Least-squares Joint Imaging of Multiples and Primaries to Shallow-water Data .................. 2782
Madhav Vyas, Morgan P. Brown

Land Multiple Attenuation - the Future is Bright ...................................................................................... 2787
Panos G. Kelamis, Wei Hong Zhu, Khalid O. Rufaii, Yi Luo

Benefits from Small Aperture Fast-3D Wave-equation Surface-related Multiple Elimination ...................... 2792
Grog Fookes, Yongzhong Wang

A Production Implementation of Data Regularization and 3D Srmefor Complex Multiple Elimination .......... 2797
Richard Hanson, Russell Jones, Tom Langston, Brian Sharp, Jaime Stein, Jinsong Wang, John Welgant, Dennis Corrigan

Case Study of Surface-related and Internal Multiple Elimination on Land Data ........................................... 2802
Riaz Alai'i, Eric Verschuur

Near Offset Data Extrapolation .................................................................................................................. 2807
Adriana Citlali Ramirez, Arthur B. Weglein, Ketil Hokstad

Removing Multiples and Imaging and Inverting Primaries Beneath a Complex Ill-defined Overburden: Defining and Addressing the Pressing Seismic Challenge ........................................... 2812
Arthur B. Weglein

The Concept of Virtual Events: Attenuation of Internal Multiples ............................................................... 2818
Ilana Erez, Luc Ikelle

Application of Extinction-theorem Deghosting Method on Ocean Bottom Data ........................................ 2821
Jingfeng Zhang, Arthur B. Weglein

OBS Multiple Attenuation with Application to the Deepwater GOM Atlantis OBS Nodes Data .................. 2827
Ganyuan Xia, Richard Clarke, John Etgen, Nurul Kabir, Ken Matson, Scott Michell

Interpolating Diffracted Multiples with Prediction-error Filters ................................................................. 2832
William Curry

Multiple Removal and Wavelet Deconvolution in the Inverse Data Space ................................................. 2837
A. J. Berkhout, D. J. Verschuur

Shot Continuation ......................................................................................................................................... 2842
Francisco Miranda Fernandez

Reconstruction of Missing Data from Multiples Using the Focal Transform ............................................... 2847
G. J. A. van Groenestijn, D. J. Verschuur

Optimum Seismic Signal Estimation with Complicated Models of Coherent and Random Noise ................ 2852
Yuriy Tyapkin, Bjorn Ursin, Yuriy Roganov, Igor Nekrasov

Stack-and-denoise: A New Method to Stack Seismic Data Sets .................................................................... 2857
Ramesh Neelamani, Thomas A. Dickens, Max Deffenbaugh

Signal Preserving Seismic Interference Noise Attenuation on 3D Marine Seismic Data ............................... 2862
Sanjeev Rajput, Shikha Rajput
Interference Cancellation by Least-squares Modeling and Adaptive Subtraction
Stephen K. Chiu

Wavelet Threshold Denoising Based on Higher-order Statistics in Attenuating Random Noise
Zhaocai Wu, Tianyou Liu, Caihong Hua

On the Denoising Method of Prestack Seismic Data in Wavelet Domain
Mao Jian, Gao Jinghuai, Chen Wenchao

Preservation of Low Frequencies in Wide-angle Data Processing for Sub-basalt Imaging
Hassan Masoomzadeh, Penny J. Barton, Satish C. Singh

Attenuating the Ice Flexural Wave on Arctic Seismic Data
David C. Hanley

Surface-wave Mitigation Using Wide-azimuth Super Gathers
John E. Anderson, Christine E. Krohn, Paul J. Lee

Correction for Water-velocity Variations and Tidal Statics
Celine Lacombe, Jon Schultzen, Suhail Butt, Didier Lecerf

Application of Stable Signal Recovery to Seismic Data Interpolation
Gilles Hennenfent, Felix J. Herrmann

Interferometric Prediction and Least-squares Subtraction of Surface Waves
Shuqian Dong, Reiling He, Gerard T. Schuster

Application of the Wave-equation-based Filtering to the Seismic Data in Mountain Area
Ke Benxi, Luo Guoan, Zhao Bo Zhao, Geng Weifeng

Vibration Noise Mechanisms in Streamer Arrays
Fred C. DeMetz, Sr

Automatic Moveout Correction by Local Event Correlations on Coherency-enhanced Gathers
Eric Duveneck, Barbel Traub

Multiazimuth (MAZ) Towed-streamer Data-processing Flow from the Nile Delta
Ted Manning, Jim Keggin, Walter E. A. Rietveld, Mark Benson, Chris Page

Edge Preserving Filtering on 3D Seismic Data Using Complex Wavelet Transforms
Michael Jervis

Fast Broadside Diffractors: A Case History
Necati Gulunay, Sylvere Depagne, Mag Magesan

The Stochastic Noise Attenuation in VSP
Man Weishi, Gao Jinghuai, Zhang Mengli, Bao Qianzong, Wang Wei

Wide-angle Data Processing in the Tau-p Domain: Continuous Nonelliptical Moveout Analysis
Hassan Masoomzadeh, Penny J. Barton, Satish C. Singh

Curvelet-based Ground Roll Removal
Carson Yarham, Urs Boeniger, Felix Herrmann

Managing Frequency-dependent Variations in Signal-to-noise Ratio
Steve McHugo, Malcolm Francis, Stephen Pickering, Alex Cooke

Toward the Seislet Transform
Sergey Fomel
Surface-consistent Gabor Deconvolution
Carlos A. Montana, Gary F. Margrave

Missing Data Interpolation with Gaussian Pyramids
Satyakee Sen

Two-stage Inversion for Large Surface-consistent Residual Statics
Side Jin

Volume 6

Quaternion-based Signal Processing
Ben Witten, Jeff Shragge

A Parallel-windowed Fast-discrete Curvelet Transform Applied to Seismic Processing
Darren Thomson, Gilles Hennenfent, Henry Modzelewski, Felix J. Herrmann

Autoregressive Extrapolation in the Frequency Domain for the Enhanced Deconvolution of Transmitted Seismic Waves
Saptarshi Dasgupta, Robert L. Nowack

Elimination of the Spread-length Bias in the Common-reflection-surface Stack
Nils-Alexander Muller

Voronoi Cell-based Staggered-grid SH Wave Numerical Simulation
Chaoshun Hu, Kirk McIntosh, Paul Stoffa

Parameter-oriented CRS Imaging
German Hoecht, Patrice Ricarte

Nonasymptotic Seismic Data Reconstruction
Francisco Miranda

Modeling the Reflection Coefficients and Slow Wave Mode Conversions at the Top and Bottom of a Gas-hydrate-bearing Interval
Juan E. Santos, J. German Rubino, Claudia L. Ravazzoli

A Multidimensional Acoustic Forward-scattering Series Model of Reflected and Transmitted Wavefield Events
Kristopher A. Innanen

A Frequency Criterion for Smoothing with Optimal Cubic Splines
Joerg Schleicher, Ricardo Biloti

Theory and Practice of Refraction Interferometry
Shuqian Dong, Jianmeng Sheng, Gerard T. Schuster

Uncertainty Estimation for Kinematic Wavefield Attributes
Tilman Kluever

Two Approaches for Q-estimation and Its Application to Seismic Inversion
Ran Bachrach, Ralf Ferber, Antouan Salama, Niranjan Banik, Randy Utech, David Keller, Mark Bengtson

Accuracy Improvement for Super-wide Angle One-way Waves by Wavefront Reconstruction
Ru-Shan Wu, Xiaofeng Jia

Seismic Interferometry for Passive and Exploration Data: Reconstruction of Internal Multiples
Kees Wapenaar
