</table>
Experimental study of the shear bands in fine-grained soils
S. Marello ................................................................. page 119

The influences of cyclic loadings on the earth pressure behind the retaining walls
S.M. Mir Mohammad Hosseini, A. Amini .................................. " 127

Effect of inter-granular void ratio on undrained shear strength of loose silty sand
S.A. Naeini, R. Ziaie-Moayed ........................................... " 135

Residual strength and liquefaction potential of reinforced silty sand
S.A. Naeini, R. Ziaie-Moayed ........................................... " 143

Effect of clay content on undrained shear strength of loose sand
S.A. Naeini, R. Ziaie-Moayed ........................................... " 151

Model test simulating in-situ rock shear tests for layered rock masses
T. Nishiyama, A. Murakami, T. Hasegawa ................................ " 159

Research results on hydraulic fracturing in weak rocks
P. Papanastasiou ........................................................ " 167

Experimental investigation and modelling of chemo-mechanical interaction in chalk
S. Pietruszczak, D. Lydzba, S.Y. Xie, J.F. Shao ................................ " 175

Drained and undrained monotonic behaviour of sand in simple shear tests
D. Porcino, G. Caridi, V.N. Ghionna ................................ " 183

On shear strength behavior of clay with sudden failure response
A. Prashant, D. Penumadu ................................................ " 191

Disturbed state constitutive modelling and testing of glacial till
S. Sane, C.S. Desai, S. Merry, D. Contractor, J.W. Jenson, P.U. Clark ................................ " 199

Physical and numerical modelling of heat transfer in geomaterials
D.N. Singh, S. Krishnaiah ................................................ " 207

Reinforcing of the coal by chemical grouts
K. Soucek, L. Stas, R. Snuparek ........................................ " 215

Influence of dilatancy parameter and elastic modulus of sand on simulation
K. Suzuki ................................................................. " 223

Non-linear consolidation characteristics of soft soils
A. Szymanski, A. Drozdz, W. Sas ........................................ " 229

Effect of varying silt content on the shear response of sands
A. Usmani, G.V. Ramana, K.G. Sharma ................................ " 237

Strain-rate dependent stress-strain behavior of undisturbed Hong Kong marine deposits in different stress states
J.-H. Yin, C.-M. Cheung ................................................ " 243

Finite element investigation of non-uniformities in hollow cylinder experiments
L. Zdravkovic, D.M. Potts .............................................. " 251
Session 6 - Flow in porous and fractured media

A BEM model for the study of hydromechanical behaviour of rock fracture and associated induced seismicity
A. Allodi, M. Castelli, D. Amitrano, Y. Guglielmi ........................................ page 261

A numerical technique for the prediction of the coupled hydro-mechanical response of rock fractures
G. Cammarata, G. Barla, M. Cravero, C. Fidelibus ........................................... 269

Experimental and numerical study of colloid transport in a single fracture
G. Grasselli, D.F. Boutt, J.T. Fredrich, B.K. Cook, J.R. Williams ...................... 277

Roughness control on hydraulic conductivity in fractures
L. Scesi, P. Gattinoni ................................................................. 285

Microstructure and permeability of shear zones in granular rocks
J. Sulem, H. Ouffroukh ................................................................. 293

Modelling enhanced fluid flow and fault sealing due to fracturing in heterogeneous rocks
S.C. Yuan, J.P. Harrison ........................................................................ 301

Study on improving the methane pumpage efficiency with the water pressure blasting in the through beds hole
Y. Zhang, Z. Huang, G. Yin, J. Song ...................................................... 309

Session 7 - Ground improvement, reinforcement, geosynthetics

Numerical investigation of limit soil pressure for design of pile stabilized slopes
E.-C. Ang, J.E. Loehr, D.E. Smith .............................................................. 319

Influence of ground improvements on the quality of man-made islands
A. Iizuka, H. Nishida, K. Kawai ................................................................. 327

Arching in piled embankment: two-dimensional physical and numerical modelling
O. Jenck, D. Dias, R. Kastner ..................................................................... 333

Evaluation of sand-geotextile interaction by triaxial compression and direct shear testing
I. Markou, A. Droudakis ........................................................................... 341

Calculated and measured horizontal deformations of high reinforced embankment
Z. Mihalinec, J. Škevin, M.S. Kovačević .................................................. 349

Effect of discrete fibers inclusion on the mechanical behavior of cemented sands
H. Mostafa, H.H. Hafez, M.K. El-Zahaby .................................................. 357

A study on the control of swell potential of selected Cyprus soils using lime stabilization
Z. Nalbantoğlu ......................................................................................... 365

VII
Numerical study on soil nail heads and nail inclinations
  Y.K. Shiu, G.W.K. Chang .......................................................... page 373

Engineering behaviour of bentonite – kaolin – sand mixtures, stabilized by cement
  I.E. Stavridakis .................................................................................. " 381

Laboratory pullout testing on soil nails
  L. Su, J.-H. Yin, L.-M. Chu ............................................................... " 389

Three dimensional stability analysis for soil nailed wall with upper boundary theory
  Y. Yang ............................................................................................. " 397

On constitutive models for untreated and chemically treated geosynthetics
  Q. Yu, A.P.S. Selvadurai ................................................................. " 403

Session 8 - Surface and near-surface geotechnical structures: foundations, piles, dams

Statistical reconstitution of fracture networks for numerical studies in geotechnics
  P. Alfonsi, O. Fouché ................................................................. " 413

Static and dynamic analysis of pile groups subjected to vertical loading
  R. Cairo, E. Conte, G. Dente ............................................................. " 421

Finite layer analysis of combined pile-raft foundations with piles of different lengths
  H.S.W. Chow, J.C. Small ................................................................. " 429

Back-calculation of rock socket friction for concrete shafts in karst
  E.C. Drumm, B. Huang, W.B. He, G. Zuo ........................................ " 437

Drilled piles circular consolidation structure for Danube grain silos in Galatzi Docs Basin
  V. Dumitrescu .................................................................................. " 445

Innovative application of piled raft foundation to optimize the design of high-rise buildings and bridge foundations
  Y. El-Mossallamy, M. Reininger .................................................... " 451

Evaluation of effect of strengthening existing caisson foundation against earthquake by steel pipe sheet piles using 3D elasto-plastic FEM analysis
  K. Isobe, M. Kimura, Y. Yoshizawa, K. Kohno, N. Harata, T. Makino.. " 459

Numerical analysis of dragload on pile groups by the finite element method
  S. Jeong, J. Lee, C.J. Lee ................................................................. " 467

Nonlinear response of laterally loaded piles in soft Bangkok clays
  R. Katzenbach, S. Pokpong ............................................................. " 475

Locating critical slip surface in slope stability analyses by particle swarm optimization
  Y.-C. Li, Y.-M. Chen .......................................................................... " 483

Design, installation and verification of driven piles in soft ground
  S.S. Liew, Y.W. Kowng ................................................................. " 491
Continuous penetration of spudcan foundation into double layered soils
   J. Liu, Y. Hu ................................................................. page 499
Deep and shallow foundations in soils at failure analyzed by application of
   creeping flow hydrodynamics
   S. Mahajan, M. Budhu ....................................................... 507
Alterations of soil stress/strain condition in the surroundings of the base of a
   pile
   J. Mecsi ............................................................................. 515
Geostatistical analysis of relative compaction during construction of an
   earthfill dam
   S.M. Miller, C.M. Comstock ................................................ 523
Representation of fractured rock masses as equivalent continua using a
   DFN-DEM approach
   K.-B. Min, L. Jing, J. Rutqvist, C.-F. Tsang, O. Stephansson ........ 531
Three dimensional bearing capacity analysis of shallow foundations
   adjacent to slopes
   A.A. Mirghasemi, A.R. Majidi .............................................. 539
Prediction and validation of traffic vibration reduction due to cement
   column stabilization
   A. Peplow, A. Kaynia .......................................................... 547
Three-dimensional model development of construction defects in drilled
   shafts
   K. Petek, P. Arduino, R.D. Holtz, C. Felice ................................ 553
Strip footing - retaining wall interaction: parameters of influence. Numerical
   and physical modelling
   H. Popa, L. Thorel, C. Gaudin, J. Garnier ................................ 561
Finite element analysis of pile loading tests
   I. Said, V. De Gennaro, R. Frank ......................................... 569
The effect of crack formation on the inclined pull-out capacity of suction
   caissons
   C. Supachawarote, M. Randolph, S. Gourvenec ...................... 577
Effect of vertical and horizontal soil inhomogeneity on dynamic pile stiffness
   and damping
   C. Syngros, G. Mylonakis, T.E. Price ..................................... 585
Application of FEM to analysis of Pubugou hydropower dam
   Q. Wu, S. Fu ..................................................................... 593
Static stress-strain behavior of asphaltic core embankment dam constructed
   on alluvium
   R. Ziaie-Moayed, S.A. Naeini .............................................. 601
Effect of hyperbolic parameters of filter layer on static behaviour of embankment dams
   R. Ziaie-Moayed, S.A. Naeini .............................................. 607

IX
Session 9 - Surface and near-surface geotechnical structures: excavations, pipes and tunnels

Two and three dimensional modelling and monitoring of the Metro Torino
G. Barla, M. Barla, M. Bonini, F. Gamba .................. 615

Flexible pipes in trenches with stiff clay walls
D.A. Cameron, J.P. Carter ...................................... 623

Monitoring surface subsidence for low overburden TBM tunnel excavation: computational aids for driving tunnels
G. Cassani, L. Manchinelli ........................................ 631

A non-linear elastic-perfectly plastic model for the simulation of the Hochstetten sheet pile wall
S. Coquillay, E. Bourgeois, Ph. Mestat ....................... 639

Design of concrete lining for pressure tunnels in Galabar dam in Iran
A. Fahimifar, H. Soroush ......................................... 647

Numerical solution of ground reaction curves by means of self-similar solution
G. Fdez-Manín, F. Varas, E. Alonso, L.R. Alejano ........ 655

Three dimensional FE analysis of tunnel induced building settlement longitudinal to the tunnel centre line
J.N. Franzius, D.M. Potts ........................................ 663

Stability analysis for underground pumped powerhouse cavern in jointed rock mass
Y. Jiang, Y. Tanabashi, K. Nagaie, Y. Yamashita, I. Andou, D. Zhao, L. Song .................................. 671

Numerical simulation on interaction in twin parallel tunnels and its experimental validation
M. Kikumoto, M. Kimura, K. Kishida, T. Tamura ........ 679

Continuum solution of soil-pipe-tunnel interaction including local failure
A. Klar, T.E.B. Vorster, K. Soga, R.J. Mair ................... 687

A numerical study of the behaviour of 19th century brick-lined tunnels in London
G.M. Nuseibeh, K.G. Higgins, Z. Cabarkapa, L. Zdravkovic .... 695

Centrifuge and finite element modelling of soil load transfer to cured-in-place pipes
A. Spasojevic, R. Mair ............................................. 703

The use of a substructure method and three-dimensional finite element modelling in assessment of damage due to underground tunnelling
H.C. Yeow, C. Wong, A. Pillai, B. Simpson .................. 711

Author index ................................................................ 719
