2nd Workshop on Network and System Support for Games

NetGames 2003

May 22 - 23, 2003
Redwood City, California, USA
TABLE OF CONTENTS

The Effect of Latency on User Performance in Warcraft III  ................................................................. 1  
Nathan Sheldon, Eric Girard, Seth Borg, Mark Claypool, Emmanuel Agu

Modeling Player Session Times of Online Games .................................................................................. 13  
Francis Chang, Wuchang Feng

A Fair Message Exchange Framework for Distributed Multi-Player Games .................................... 17  
Katherine Guo, Sant Mukherjee, Sampath Rangarajan, Sanjoy Paul

Causality and Media Synchronization Control for Networked Multimedia Games:  
Centralized versus Distributed ............................................................................................................... 30  
Yutaka Ishibashi, Shuji Tasaka

Bandwidth requirement and state consistency in three multiplayer game architectures .................. 40  
Joseph D. Pellegrino, Constantinos Dovrolis

Access Network Delay In Networked Games ......................................................................................... 48  
Tom Jehaes, Danny De Vleeschauwer, Toon Coppens, Bart Van Doorselaer, Eva Deckers,  
W. Naudts, K. Spruyt, R. Smets

A Zone-based Gaming Architecture for Ad-Hoc Networks ................................................................ 57  
Sebastian Matas Riera, Oliver Wellnitz, Lars Wolf

Mobility and Stability Evaluation in Wireless MultiHop Networks Using MultiPlayer Games ........ 62  
F. Fitzek, L. Badia, M. Zorzi, G. Schulte, P. Seeling, T. Henderson

Six in the City: Introducing Real Tournament – A Mobile IPv6 Based Context-Aware Multiplayer Game ................................................................. 73  
Keith Mitchell, Duncan McCaffery, George Metaxas, Joe Finney, Stefan Schmid and Andrew Scott

Experiences Using a Dual Wireless Technology Infrastructure to Support Ad-hoc Multiplayer Games ......................................................................................................................... 83  
Hartmut Ritter, Thiemo Voigt, Min Tian, Jochen Schiller

Human Pacman: A Sensing-based Mobile Entertainment System with Ubiquitous Computing and Tangible Interaction ................................................................. 88  
Adrian David Cheok, Siw Wan Fong, Kok Hwee Goh, Xubo Yang, Wei Liu, Farzam Farzbiz

Network Technology, Markets, and the Growth of Synthetic Worlds ............................................. 100  
Edward Castronova

A Multi-User Framework Supporting Video-Based Avatars ............................................................... 114  
Peter Quax, Tom Jehaes, Pieter Jorissen, Wim Lamotte

Priority-Based Distribution Trees for ApplicationLevel Multicast .................................................. 125  
Jurgen Vogel, Jorg Widmer, Dirk Farin, Martin Mauve, Wolfgang Effelsberg

Spatial Principles of Level-Design in Multi-Player First-Person Shooters ...................................... 135  
Christian Gütter, Troels Degn Johansson
