Volume 1 CONTENTS

SPE 22355 Low-Damage Fluid-Loss Control for Well Completions ........................................... 13

SPE 22507 The Further Development of the Ekofisk Field: “In-Fill” Drilling
Taken One Step Further .................................................................................................................. 23
T.M. Croucher, Phillips Petroleum Co. Norway

SPE 22823 A New Technique for Servicing Horizontal Wells ......................................................... 33
R.J. Tailby, Statoil A/S; J.H. Yonker and J.L. Pearce, Otis Engineering Corp.

SPE 22826 Design, Testing, and Field Use of a New Selective Reeled Tubing Well
Stimulation System ......................................................................................................................... 49
C.W. Pleasants and D.W. Head, Otis Engineering Corp., and J. de Ruiter,
Brunei Shell Petroleum

SPE 22916 Reservoir Engineering of a Geologically Complex, North Sea Eocene/Palaeocene
Reservoir With Highly Unfavourable Mobility Ratio and Gas/Water Coning ......................... 59
T.A. Moralee, B.J. McDonald, and D.R. Phillips, Kerr-McGee Oil (UK) plc

SPE 22918 Reservoir Gas Management in the Brae Area of the North Sea ..................................... 75
I.C. Phillips, Marathon Oil UK Ltd.

SPE 23038 A Systematic Approach to Well Design ....................................................................... 91
W.H.P.M. Heijnen, Nederlandse Aardolie Mij. B.V.

SPE 23039 Continuous Improvement in Drilling Performance: A Challenge for the Industry .... 101
R. Buchan, BP Exploration Operating Co. Ltd.

SPE 23040 The Rock Mechanical Aspects of Drilling a North Sea Horizontal Well ...................... 111
S-W. Wong, C.A.M. Veeken, and C.J. Kenter, Shell Research B.V.

SPE 23041 Site Selection, Well Planning, and Collision-Avoidance
Considerations for the Piper Field Redevelopment ..................................................................... 123
D.P. Taylor, Elf Enterprise Petroleum (Caledonia) Ltd., and
J.A. Johnstone, Eastman Christensen

SPE 23042 Environmental Protection: Balancing the Risks ......................................................... 135
D.N. Miller, Coopers & Lybrand Deloitte

SPE 23044 Hardware and Software Techniques for Pipeline Integrity and Leak
Detection Monitoring .................................................................................................................... 139
N.C. Turner, Ferranti Ltd.

SPE 23045 Snorre Subsea Tree and Completion Equipment ......................................................... 149
J.D. Williams, Esso Norge a.s, and S. Ytreland, Saga Petroleum a.s

SPE 23046 Tordis Field Development, Single Satellite Wells With Subsea Manifold Center .......... 159
B. Kloeve and E. Hestad, Saga Petroleum a.s

SPE 23047 The Use of Dynamically Positioned Units in Subsea Completions
Offshore Brazil .............................................................................................................................. 175
J.R.F. Moreira, Petrobás

SPE 23048 Effect of Some Design Parameters on Well Completion Stresses ................................. 185
D.B. McIver, M.A.I. Ltd.

SPE 23049 The VASPS Subsea Separation and Pumping System Applied to Marginal
Field Developments ..................................................................................................................... 193
A.C. Baker, Baker Jardine & Assoc.s Ltd., and J.H. Entress,
BIA-Mentor Production Systems Ltd.

SPE 23050 Electrical Submersible Pumps in Subsea Completions .............................................. 203
P.A. Scott and M. Bowring, Subsea Intervention Systems Ltd., and
B. Coleman, LaSalle Engineering Ltd.

SPE 23051 Continued Development and Field Testing of the Subsea Wireline
Winch System ............................................................................................................................... 211
J.A. Graser, Subsea Well Services Ltd.

SPE 23052 Getting More Out of Drilling Data by Analysis-While-Drilling ..................................... 219
N. Hytten and L. Havrevold, Nordic Offshore Systems AS, and P. Parigot, Total Norge AS
SPE 23053 Rig Computer System Improves Safety for Deep HP/HT Wells by Kick Detection and Well Control Monitoring ........................................... 227
M.A. Weishaupt, Sedco-Forex; N.P. Omsberg, Phillips Petroleum UK Ltd.; and S.I. Jardine and D.A. Patterson, Sedco-Forex

SPE 23054 Single-Stack Wellhead System for Jackup Drilling Rig ................................................................. 235

SPE 23055 Advancements in Field Installation of Preloaded Subsea Wellhead Systems for TLP and High-Fatigue Environments .................................................. 245
F.C. Hines and C. Jennings, ABB Vetco Gray UK Ltd.

SPE 23056 Development of an All-Metal-Sealing Subsea Wellhead System for Critical Service Applications ........................................... 253
S.P. Singeetham and W.A. Valka, FMC Corp.

SPE 23057 Adjustable Wellhead Technology Proves Cost Effective Whilst Safety in General Is Improved ........................................ 261
B.H. van Bilderbeek and I.F. Milne, Ingram Cactus Co. (Plexus Ocean Systems)

SPE 23058 Jack-Up Drilling System (J.U.D.S.) ................................................................. 269
S.A. Cromar and E.R. Schwelm, ABB Vetco Gray UK Ltd.

SPE 23059 The Influence of Oil-Based Drilling Fluid Chemistry and Physical Properties on Oil Retained on Cuttings ........................................... 279
D.J. Oakley, S.G. James, and S. Cliffe, International Drilling Fluids

SPE 23060 A Microbial Approach to Cleaning Used Oil-Based Drilling Muds ........................................ 291
N.P. Thurman, Petroleum Science & Technology Inst., and M.T. Heydeman, U. of Reading

SPE 23061 Design of Environmentally Safe Drilling Fluids: Tests Under Actual Bottomhole Conditions in an Original Flow Loop ........................................... 313
D. Degouy and J. Lecourtier, Inst. Français du Pétrole; F. Marcassa, Total-CFP; and T. Forsans, SNEA (P)

SPE 23062 An Environmentally Acceptable and Field-Practical Cationic Polymer Mud System ........................................... 325

SPE 23064 Measurement of Multiphase Well Fluids by Positive Displacement Meter ........................................... 337
R.C. Gold, J.S. Miller, and W.J. Priddy, BP Intl. Ltd.

SPE 23065 The New UK Oil and Multiphase Flow Measurement Standards Laboratory ........................................... 345
N.W. King, NEL

SPE 23066 Recent Developments in Pipefreezing Technology for the Oil Industry ........................................... 361
M.J. Burton and C.W. Bishop, Bishop Pipefreezing Services Ltd.

SPE 23067 Blowdown of Pipelines ................................................................. 369
S.M. Richardson and G. Saville, Imperial College, London

SPE 23068 Retardation of Cement Slurries to 250°F ................................................................. 379
J. Bensted, BP Intl. Ltd.

SPE 23069 Minimizing Risks in High-Temperature/High-Pressure Cementing: The Quality Assurance/Quality Control Approach ........................................... 387
B. Vidick and A. Acock, Dowell Schlumberger

SPE 23070 Emulsion Cement ................................................................. 397
P. Skalle and J. Sveen, U. of Trondheim

SPE 23071 The Chemical Logging of Drilling Fluids ................................................................. 409
T.L. Hughes and T.G.J. Jones, Schlumberger Cambridge Research, and T. Geethan, Sedco-Forex

SPE 23072 New Water-Based Muds for Tertiary Shale Control ................................................................. 425
P.I. Reid, BP Intl. Ltd., and R.C. Minton, BP Exploration Operating Co. Ltd.
