

# Fracture Mechanics of Concrete and Concrete Structures

VOLUME 1: New Trends in Fracture Mechanics of Concrete

## *Editors*

Alberto Carpinteri

*Politecnico di Torino, Department of Structural Engineering and Geotechnics, Italy*

Pietro G. Gambarova

*Politecnico di Milano, Department of Structural Engineering, Italy*

Giuseppe Ferro

*Politecnico di Torino, Department of Structural Engineering and Geotechnics –  
Italian Group of Fracture, Italy*

Giovanni A. Plizzari

*University of Brescia, Department of Civil Engineering, Architecture,  
Land and Environment, Italy*

**Taylor & Francis**  
Taylor & Francis Group

LONDON / LEIDEN / NEW YORK / PHILADELPHIA / SINGAPORE

## Table of contents

Preface to Volume 1	XIX
Sponsors	XXI
<b>VOLUME 1 – New Trends in Fracture Mechanics of Concrete</b>	
<i>Part I Theoretical and numerical Methods in fracture mechanics of concrete</i>	
Computational fracture mechanics of concrete structures: A retrospective through multiple lenses <i>J.M. Emery, J.D. Hochhalter &amp; A.R. Ingraffea</i>	3
Cohesive fracture and size effect in concrete <i>L. Cedolin &amp; G. Cusatis</i>	17
Fractals, statistics and size-scale effects on concrete strength <i>A. Carpinteri &amp; S. Puzzi</i>	31
Size and shape effects on fracture strength of concrete <i>H.-K. Man &amp; J.G.M. van Mier</i>	39
Asymptotic analysis of boundary effects on concrete fracture <i>K. Duan, X.Z. Hu &amp; F.H. Wittmann</i>	45
Dimensional effects on failure of concrete loaded in Mode II and III <i>G. Ferro, B. Chiaia &amp; F. Gianola</i>	55
Path and dynamics of cracks propagating in a disordered material under mode I loading <i>L. Ponson, D. Bonamy, E. Bouchaud, G. Cordeiro, R.D. Toledo &amp; E.M.R. Fairbairn</i>	63
A general static approach to size-effect in cementitious materials <i>G. Rosati &amp; M.P. Natali Sora</i>	69
Three-dimensional analysis of crack geometry <i>T. Zhang, G. Nagy, E.N. Nagy &amp; E.N. Landis</i>	77
3D discrete simulations of fracture in concrete specimens <i>S. Saito &amp; T. Higai</i>	85
Simulation of fracture at different loading rates using molecular dynamics <i>J. Kim, J. Lim &amp; Y.M. Lim</i>	93
Accurate simulation of frictionless and frictional cohesive crack growth in quasi-brittle materials using XFEM <i>B.L. Karihaloo &amp; Q.Z. Xiao</i>	99
Structural geometry, fracture process zone and fracture energy <i>V. Veselý, L. Růžička &amp; Z. Keršner</i>	111

From discontinuous to macroscopic modeling of mode I cracking behavior in cement-based composites <i>J.-L. Tailhan, P. Rossi, J. Lombart &amp; F. Guerrier</i>	119
How to extract the crack opening from a continuous damage finite-element computation? <i>F. Dufour, G. Pijauder-Cabot, M. Choinska &amp; A. Huerta</i>	125
Modelling cohesive crack growth using a two-step finite element-scaled boundary finite element coupled method <i>Z.J. Yang &amp; A.J. Deeks</i>	133
An enhanced cohesive crack element for XFEM using a double enriched displacement field <i>J.F. Mougaard, P.N. Poulsen &amp; L.O. Nielsen</i>	139
Strong discontinuity formulations: A comparative study <i>J. Alfaiate &amp; L.J. Sluys</i>	147
Simulation of crack opening through a corner node, using rigid-plastic interface elements <i>D. Ciancio, I. Carol &amp; M. Cuomo</i>	155
Advances in meso-mechanical analysis of concrete specimens using zero-thickness interface elements <i>I. Carol, A. Idiart, C.M. Lopez &amp; A. Caballero</i>	163
Numerical model for time-dependent fracturing of concrete structures and its applications <i>G. Di Luzio &amp; L. Cedolin</i>	175
Mixed-mode pressurized fracture at the dam-foundation joint <i>F. Barpi &amp; S. Valente</i>	181
Simplified stability analysis of quasi-brittle notched columns <i>L. Fenu</i>	187
How volumetric-deviatoric coupling influences crack prediction in concrete fracture tests <i>R. Rempling &amp; P. Grassl</i>	197
Propagation analysis of fluid-driven fracture using the discrete crack approach <i>J.M. Segura &amp; I. Carol</i>	205
<i>Part II Experimental Methods in Fracture Mechanics of Concrete</i>	211
Strength and fracture energy of concrete in seawater <i>F.H. Wittmann, Z. Sun &amp; T. Zhao</i>	213
Effects of the aggregate size and specimen dimensions on the brittle fracture of concrete <i>M.A. Issa &amp; A. Chudnovsky</i>	219
Experimental and numerical analysis of the fracture process in the splitting tension test of concrete <i>V. Malárics &amp; H.S. Müller</i>	225
An experimental study on the development of fracture process in plain concrete beams using <i>b</i> -value analysis of AE signals <i>B.K. Raghu Prasad &amp; R. Vidya Sagar</i>	233
Specimen geometry in uniaxial tension test of concrete <i>H. Akita, H. Koide &amp; H. Mihashi</i>	243

Fracture properties of cement paste and mortar: An experimental investigation <i>Y. Zhu, S.L. Xu &amp; Y.H. Zhao</i>	249
Characterization of confined mixed-mode fracture in concrete <i>O.I. Montenegro, I. Carol &amp; D. Sfer</i>	257
Biaxial testing machine for mixed mode cracking of concrete <i>L. Østergaard, J.F. Olesen &amp; P.N. Poulsen</i>	263
Direct measurement of double-K fracture parameters and fracture energy using wedge-splitting test on compact tension specimens with different size <i>S. Xu, D. Bu, H. Gao, S. Yin &amp; Y. Liu</i>	271
The experimental determination of double-K fracture parameters of concrete under water pressure <i>J.M. Wang, X.F. Zhang &amp; S.L. Xu</i>	279
Experimental and numerical studies on the load-carrying capacity of notched concrete beams <i>Z. Shi, M. Nakano &amp; K. Yamakawa</i>	285
Experiments and analyses of fracture properties of grouting mortars <i>S. Ishiguro</i>	293
Assessment of a tensile constitutive model considering various loading histories for early age concrete <i>M. Kunieda, W. Srisoros, N. Ueda, H. Nakamura &amp; Y. Ishikawa</i>	299
Determination of concrete fracture toughness from modal dynamic response of notched beams <i>L.E.T. Ferreira, J.B. Hanai, L.V. Vareda, S.F. Almeida, A.I. Silva &amp; J.L.A.O. Sousa</i>	309
Debonding and fracture between deformed bars and early-age concrete <i>Y. Mimura, I. Yoshitake, K. Morimoto &amp; S. Hamada</i>	317
Bi-material fracture properties of concrete-concrete cold joints <i>P. Subba Rao &amp; J.M. Chandra Kishen</i>	325
Proposal of an optimal experimental method for the evaluation of concrete shear transfer mechanism <i>Y. Takase, M. Ueda &amp; T. Wada</i>	333
<i>Part III Constitutive damage modelling of concrete</i>	341
Elastoplastic nonlocal damage model for concrete and size effect analysis <i>A. Krayani, F. Dufour &amp; G. Pijaudier-Cabot</i>	343
A nonlocal coupled damage-plasticity model for concrete <i>G.D. Nguyen &amp; A.M. Korsunsky</i>	351
Plastic modeling with nonlocal damage of concrete subject to mechanical loading <i>A. Mohamad-Hussein &amp; J.F. Shao</i>	361
Parameter identification of continuum models for localized failure <i>C. Iacono &amp; L.J. Sluys</i>	369
Thermodynamics framework for robust computations of loading-induced anisotropic damage <i>R. Desmorat, F. Gatuingt &amp; F. Ragueneau</i>	377
Stress-based elastic anisotropic unilateral degradation model for concrete <i>J.Y. Wu &amp; J. Li</i>	385

Anisotropic damage of concrete: A three-dimensional approach with energy-based loading surfaces and a new evolution law <i>P. Pröchtel &amp; U. Häußler-Combe</i>	393
Microstructure-based failure surfaces of matrix-inclusion materials: The origin of J3 plasticity highlighted by limit analysis <i>J. Fiissl &amp; R. Lackner</i>	403
Conservation laws for multiphase fracturing materials <i>G. Romano, R. Barretta &amp; M. Diaco</i>	411
Modeling of the influence of the damage on the behavior of concrete during tensile-compressive loading <i>S. Mertens, J. Vantomme &amp; J. Carmeliet</i>	419
Fracture via a sequence of events: A saw-tooth softening model <i>J.G. Rots, S. Invernizzi &amp; B. Belletti</i>	427
A new multi-axial failure criterion for concrete <i>M. Como &amp; R. Luciano</i>	437
Stochastic regularisation of lattice modelling for the failure of quasi-brittle materials <i>C. Joseph &amp; A.D. Jefferson</i>	445
Modelling compressive cracking in concrete by a modified lattice model <i>M.M. Abreu, J.V. Lemos, J. Carmeliet &amp; E. Schlangen</i>	453
Digital image correlation techniques applied to post-process discrete modeling <i>A. Delaplace &amp; F. Hild</i>	461
3D multi-scale modeling of mortar mechanical behavior and effects of microstructural changes <i>F. Bernard, S. Kamali-Bernard, W. Prince &amp; M. Hjiqj</i>	467
Micropolar peridynamic modeling of concrete structures <i>W. Gerstle, N. Sau &amp; E. Aguilera</i>	475
<i>Part IV Time effects in the damage and fracture of concrete</i> 483	
Modelling of coupled multifield problems in concrete by means of porous media mechanics <i>F. Pesavento, B.A. Schrefler &amp; D. Gawin</i>	485
Coupling between creep and cracking in tension <i>N. Reviron, F. Benboudjema, J.M. Torrenti, G. Nahas &amp; A. Millard</i>	495
Coupling between leaching and creep of concrete <i>J.M. Torrenti, V.H. Nguyen, H. Colina &amp; F. Le Maou</i>	503
Coupling creep and damage in concrete through a constant parameter <i>M. Bottoni, F. Dufour &amp; G. Pijaudier-Cabot</i>	509
Hygro-mechanical modeling of cracked concrete in the framework of the X-FEM <i>S. Jox, C. Becker &amp; G. Meschke</i>	517
Modeling the hygro-mechanical response of quasi-brittle materials <i>P. Moonen, L.J. Sluys &amp; J. Carmeliet</i>	525

3D Thermo-hygro-mechanical model for concrete <i>J. Ožbolt, G. Periškić &amp; H.W. Reinhardt</i>	533
Matching permeability law from diffuse damage to discontinuous crack opening <i>M. Choinska, F. Dufour &amp; G. Pijauder-Cabot</i>	541
Wet versus dry cement pastes and concretes: A mathematical approach to their strength and fracture properties <i>R. Suárez-Antola</i>	549
Probabilistic assessment of fatigue crack propagation in concrete <i>T. Sain &amp; J.M. Chandra Kishen</i>	557
Fracture of concrete beams at different loading rates <i>H.W. Reinhardt &amp; J. Ožbolt</i>	563
Mesoscopic modelling of concrete under impact <i>R.R. Pedersen, A. Simone, M. Stroeven &amp; L.J. Sluys</i>	571
Failure mechanisms of concrete under impact loading <i>I. Vegt, K. van Breugel &amp; J. Weerheijm</i>	579
Break-up of concrete structures under internal explosion <i>J. Weerheijm &amp; H.S. Lim</i>	589
Ballistic limit assessment for concrete slabs using the MHJC concrete model <i>M. Polanco-Loria, O.S. Hopperstad &amp; T. Børvik</i>	599
Evaluation of an experimental method via numerical simulations <i>H. Schuler</i>	607
Influence of loading rate on concrete cone failure <i>J. Ožbolt, K.K. Rah &amp; D. Meštrović</i>	613
Modelling the energy balance of acoustic emission <i>N. Pugno, G. Lacidogna, A. Carpinteri &amp; F. Bosia</i>	621
High strain-rate testing of concrete and steel for the assessment of the Tenza Bridge under blast loading <i>E. Cadoni, D. Asprone &amp; A. Prota</i>	627
Author index	637
