INTERNATIONAL CONFERENCE ON TRANSPORTATION ENGINEERING 2009
Volume Three

PROCEEDINGS OF THE SECOND INTERNATIONAL CONFERENCE

July 25–27, 2009
Southwest Jiaotong University
Chengdu, China

SPONSORED BY
China Communications and Transportation Association
The Transportation & Development Institute (T&DI)
of the American Society of Civil Engineers
Mao Yisheng Science and Technology Education Fund

EDITED BY
Qiyuan Peng
Kelvin C. P. Wang
Yanjun Qiu
Yun Pu
Xia Luo
Bin Shuai

Published by the American Society of Civil Engineers
Volume Three

Tourism Travel Demand Forecast Method: A Case Study of Lushan Scenic Area.................................................................1790
Gang Ren, Xiaqing Liu, and Zimu Li

Applicability of Traffic Safety Facilities Selection for Rural Highways..........................1796
Dianliang Xiao and Yujia Tian

A Noise Prediction Model on Inland Waterways Considering Water Surface Attenuation Effects Based on the FHWA.........................................................1802
Benlin Dai, Zulin Hua, Fangfang Zhu, Wei Li, and Lijun Ji

Optimization Analysis of Cable Tensions for Suspension Erection of Long-Span CFST Arch Bridge......................................................1808
Jianjun Wei and Chuanfu Li

Analysis of the Factors Affecting the CBR Value of Silt Roadbed.........................................1814
Zhanliang Liu, Yongman Zhang, and Jianhong Di

The Noise-Reducing Character of OGFC Pavement with Crumb Rubber Modified Asphalt......................................................1820
Lan Wang, Yongming Xing, and Chunqing Chang

Optimal Cable Tension Design for Cable-Stayed Bridges on Trust Region Algorithm.........................1826
Hao Sun, Yong-zhi Dou, and Yong-jiu Qian

Bogie Frame Fatigue Simulation Based on Flexible Multibody Dynamics.........................1832
Huichao Wu and Pingbo Wu

Man-Machine Interactive Ship Maneuver System .......................................................1838
Qingyang Xu, Xianyao Meng, Xinjie Han, and Song Meng

Test and Analysis of LNG Tank Container Waterway Transportation .........................1844
Jianhua Peng

A Real-Time Scheduling Model in Container Wharf Based on Mobile-Agent......................1849
Bin Xu and Rui Gu

Long-Range Tracking of Intelligent Locomotive Dispatching System Based on 3S Technology..................................................1855
Wenjing Ren and Jianfei Guo

Reckon the Public Debts’ Sustainability of Financing Scale: Based on the Consideration of Railway’s New Development in China .........................1860
Daixin He, Zirong Ye, and Lei Chen

Application of TOPSIS in Evaluating Transfer Efficiency at Urban Railway Passenger Station.................................1866
Can Zhang and Liangjie Xu

Preparation Technique for Prestressed Concrete Beam Used in Ballastless Track.................................1872
Kunlin Ma and Youjun Xie
Prediction and Analysis on Investment in Transportation Projects —Based on the Perspective of Private Capital..................................................................................................................................................1981
Yunning Zhang, Yuming Ma, and Xing Qin

The Method System Based on Screening-Sequencing Two-Stage Model for Selecting the Port Leading Industry...........................................................................................................................................1987
Liupeng Jiang, Xuejun Feng, and Wei Wang

Computation of Road Network Reliability Based on Effective States ..................................................................................................................................................................................1993
Lingjuan Chen, Haixu Liu, and Jingqiong Wu

Train Operation Diagram Information System for China Railway .................................................................................................................................................................................................1999
Shaoquan Ni, Hongxia Lv, and Mingjun Yang

Train-Track-Bridge Dynamic Simulation of Reinforced T-Beam on Speed-Up Railway Line ..................................................................................................................................................2005
Shaolin Wang, Wanning Zhai, and Jianmin Gao

Reliability of Urban Rail Networks Based on the Network Connectivity ...........................................................................................................................................................................2011
Jingjing Chen, Jiahua Liu, and Zhibin Jiang

Field Monitoring on Train-Induced Vibration in the Seasonally Frozen Region of Daqing in Spring ..............................................................................................................................................2017
Shijun Chen, Xianzhang Ling, Zhanyuan Zhu, Feng Zhang, and Wei Ma

Wheel/Rail Lateral Impact and Its Effect on Derailment .................................................................................................................................................................................................2023
Qinghua Guan and Jing Zeng

Design and Realization of Modular IMIS for Container Freight Station ..............................................................................................................................................................................2029
Guiliang Zhou, Lina Mao, and Yanru Zhu

Numerical Simulation of Wheel/Rail Noise of the Ballastless Track ......................................................................................................................................................................................2035
Xinwen Yang and Caiyun Yan

Application of Principal Component Analysis Method on Logistics Supplier Selection ..................................................................................................................................................2041
Yukui Sheng and Wanlian Lan

Storage Management Efficiency Analysis Based on Logistics Transportation Guarantee .....................................................................................................................................................2047
Yue Shang

An Evaluation Model Based on Grey Trigonometry Whitening Weight Function for Logistic Center .........................................................................................................................................2055
Junjuan Liu, Meidan Xiao, and Bingjun Li

The Model of Double-Layer Optimization Transportation and Its Algorithm .....................................................................................................................................................2061
Yefu Zhou and Dengfeng Wu

Identify Vehicle Geometry Parameter of Oversize Transportation ..............................................................................................................................................................2067
Wenbui Zhang, Shengqin Li, Shuhua Cui, and Hongxing Deng

Quantitative Comparison Method of Choosing Protection Schemes of Highway Cut-Slope Based on Environment Protection ..................................................................................2073
Zhirong Jia

Subway Integrated Monitoring System under the Framework of ITS ..........................................................................................................................................................2079
Jia Wang, Chengcheng Wang, Zhixin Chen, and Lei Zhang

xxvii
High Performance Steam-Cured Concrete for Railway Precast Elements
Zhimin He, Youjun Xie, Baoju Liu, and Guangcheng Long

Monitoring System for Energy-Saving and New-Energy-Using Vehicle Based on WebGIS
Guangquan Lu, Guizhen Yu, Chunsheng Jiang, Guangyu Xiao, and Wei Zhou

Evaluation and Control of Aircraft Noises’ Influence on the Sensitive District around Airfield
Wei Hao, Liangcai Cai, Guanhu Wang, Peng Jiao, Luoli Zhang, and Haifu Wang

Preventing Water Outburst in Excavation in Subsea Tunnel
Lewen Zhang, Zhennong Tian, Shucai Li, and Ying Wang

Effect of Parameters of Rail Structure and Vehicle Speed on Wheel-Rail Force when Vehicle Crossing Curve Track
Jiayang Xiong, Xindong Li, and Guangwu Yang

Application of Foamed Concrete in Road Engineering
Wenling Tian, Liyuan Li, Xiaoyan Zhao, Mingjie Zhou, and Nana Wang

The Evolution Mechanism of Logistics Synergetic System
Jianwei Ren and Xueyan Zhang

Loss Evaluation on Time Windows Slippage in Logistics Chain
Xiaolai Ma, Jin Zhang, and Baohui Jin

Comparing of Link Travel-Time Estimation Methods Based on GPS-Equipped Floating Car
Guiyan Jiang, Ande Chang, and Wei Zhang

Pedestrian’s Psychology on Gap Selecting when Crossing Street
Guangxin Liu and Keping Li

Real-Time Measuring System Based on Vehicle Flow Video Image
Hongjian Wang

Travel Speed Estimation Method for Arterial Road Based on Spot Traffic Parameter
Ji-wei Li and Gui-yan Jiang

Effect of Driver’s Dynamic Visual Characteristics on Link Capacity
Jing Wu, Jian Lu, and Weiwei Chen

A GLS Based Method of Road Network Dynamic OD Matrix Estimation from Traffic Counts
Yuntao Chang, Xiaoguang Yang, Qingchang Lu, and Duidui Liang

Application and Effect of Feed-Forward Control Method for Expressway Tunnel Ventilation System
Yong Fang and Chuan He

Intelligent Control of Ventilation, Lighting and Disaster Prevention for Highway Tunnel Group or Abut Tunnels
Chuan He, Yong Fang, Yanhua Zeng, and Yuchun Zhang

Identifying the Cause and Effect Factors of Traffic Safety at Freeway Work Zone Based on DEMATEL Model
Biao Wu, Hongguo Xu, and Wenhui Zhang
Macroscopic Analysis of Transportation Energy Consumption and Implication to China Urban Planning and Development ................................................................. 2370
Shengyong Yao and Haixiao Pan

An Effective Approach to Treating with Unrealistic Paths in Multi-Modal Traffic Assignment ........................................................................................................... 2377
Tianran Zhang, Dongyuan Yang, Yali Zhao, and Chao Yang

Modeling Parking Choice Behavior without Parking Information .......................................................... 2383
Baoyu Zhang, Weiquan Zhang, and Xiaodong Wang

A Combined Model for Traffic Flow Prediction Based on Wavelet Analysis ........................................... 2389
Hongyan Gao and Fasheng Liu

The Framework of “One Road One Line with Straight Driving” Public Transportation System .......................................................... 2395
Zhiyong Guo, Wei Wang, and Xuewu Chen

The Traffic Guidance System of Elevated Roads in Hongqiao Comprehensive Transportation Hub .......................... 2401
Min Chen and Xuesong Zhang

Congestion Management Methods Based on Traffic Information Computing .............................................. 2407
Xiaofeng Ji, Lan Liu, Zenghui He, and Xin Li

Cost Analysis Models for Optimal Frequency of Bus Rapid Transit ....................................................... 2413
Fangqiang Lu and Xuewu Chen

Urban Rail Transit Plan System Study in China ....................................................................................... 2419
Yan Lu and Jianjun Dong

The Reduced Velocity of the Pedestrians and Bicycles Conglomeration in the Signalized Intersection Crosswalks ............................................................ 2425
Jinguang Liu, Quan Yu, Jian Rong, and Xiaoming Liu

Traffic Detector Optimal Location Model and Algorithm for Dynamic OD Estimation ................................ 2431
Guang Hao, Hongyan Xiang, and Guolin Zhang

A New-Type Environmental Protection De-Icing Agent ........................................................................ 2437
Baomin Wang, Jing Li, and Wei Liu

Application of Quantified SWOT Analysis on Mass Transit Operation of Intercity Train ...................... 2442
Fang Huang, Jie Tao, and Yang Zhou

Air Arm Transferring Airlift Loading Plan Optimization ..................................................................... 2448
Baisong Chen, Zhe Yang, Yingjun Lv, and Chong Meng

Application of Fuzzy-AHP Method to Optimal Selection of FPDS ..................................................... 2454
Ken Chen and Qipeng Yan

Simulation on the Pressure Control of Common Rail of an In-Cylinder Direct-Injection CNG Engine ........ 2463
Hui Liu, Wei-dong Jin, and Yiqiang Peng

Shear Fatigue Equivalent Temperature of Asphalt Mixture ................................................................. 2469
Jun Yuan and Lijun Sun
The Maximum Temperature under Ceiling in Fires of a Longitudinally Ventilated Tunnel .................................................. 2477
Y. Z. Li, B. Lei, Z. H. Xu, and Z. H. Deng

Progressive Collapse of Cable-Stayed Bridges ........................................... 2484
Jian Feng and Jianguo Cai

Settlement of CFG Composite Foundations of the Beijing-Tianjin Inter-City Rail Construction ........................................ 2490
Yupeng Shen, Guanghui Li, Ruiling Feng, and Xiaohe Li

A Study of the Dynamic Performance of the Heavy Haul Locomotive with the Longitudinal Press Force on Coupler ............. 2496
Weihua Ma, Shihui Luo, and Rongrong Song

Instrumented Wheelset Wheel/Rail Force Measurement by Blind Signal Separation .................................................. 2502
Yu Ren and Jianzheng Chen

Key Problem of EMU Routing Scheme .................................................. 2508
Miaomiao Lu, Shaoquan Ni, and Peng Sun

Railway Track Integral Maintenance Index and Its Application .......... 2514
Haifeng Li and Yude Xu

A General Stochastic Petri Net Model for Simulation of Receiving and Break-Up System of Marshalling Station .................. 2520
Qiao Xiong and Qipeng Yan

Evaluation of Operational Efficiency for Listed Companies in Logistics Industry in China ............................................. 2526
Jiansheng Zhang and Huaizhen Ye

An Integrated Process Model of Third Party Logistics Service Providers Selection under Supply Chain Management ............. 2532
Chunru Li and Qing Huang

Calculation Method for Capacity-Loss to Supersaturated Intersections .................................................. 2540
Gaowei Zhou, Xia Luo, and Xiaoru Yin

Intercity Transport System and Matthew Effect .................................. 2546
Peng Zhang and Feng Xie

Phase Optimization of Arterial Coordinated Control ......................... 2552
Jungang Wang, Li Wang, Qing Zhang, Yuzhu Li, Xiangtao Meng, and Naiyou Liu

Running Characteristics of Bicycle Traffic Flow with Its Traffic Capacity on Slow-Moving Traffic Shared-Use Paths .............. 2560
Jun Chen, Zhiquan Xie, and Changli Qian

Data Dictionary Design for Travel Time Acquiring System Based on 3GS .................................................. 2566
Wei Zhang, Guiyan Jiang, Wei Zhang, and Ande Chang

A Capacity Model of Signal-Controlled Road Network Considering Delay of Intersections ........................................ 2572
Peng Zhang, Wenquan Li, and Yulin Chang

A Model and an Algorithm of Urban Transport Network Capacity .......... 2578
Huapu Lu, Xinxin Yu, Changzhi Bian, and Ziyin Deng
