Application of Modern Stratigraphic Techniques: Theory and Case Histories

Kenneth T. Ratcliffe and Brian A. Zaitlin, Editors

CONTENTS

Preface
KENNETH T. RATCLIFFE AND BRIAN A. ZAITLIN ................................................................. 1

Sequence Stratigraphic Methodologies

The sequence stratigraphy family tree: understanding the portfolio of sequence methodologies
ARTHUR D. DONOVAN ........................................................................................................... 5

Correlating siliciclastic successions with sequence stratigraphy
ASHTON F. EMBRY .............................................................................................................. 35

Biostratigraphic Methodologies

Recent advances in the application of biostratigraphy to hydrocarbon exploration and production
JASON A. CRUX, ANTHONY GARY, GUNILLA GARD, AND WILLIAM E. ELLINGTON ...................... 57

A technique to provide digital biostratigraphic information for the seismic interpreter
PAUL WATSON, CAROLINE REID, AND ELISABETH NAIRN ............................................. 81

Chemostratigraphic Methodologies

The application of chemostratigraphic techniques to distinguish compound incised valleys in low-accommodation incised-valley systems in a foreland-basin setting: an example from the Lower Cretaceous Mannville Group and Basal Colorado Sandstone (Colorado Group), Western Canadian Sedimentary Basin
AMELIA M. WRIGHT, KENNETH T. RATCLIFFE, BRIAN A. ZAITLIN, AND DAVID S. WRAY ......................... 93

Chemostratigraphy of Upper Carboniferous (Pennsylvanian) sequences from the southern North Sea (United Kingdom)
TIM J. PEARCE, JOHN H. MARTIN, DIANA COOPER, AND DAVID S. WRAY ................................. 109

Strontium isotope stratigraphy
J.M. McARTHUR ...................................................................................................................... 129

Constraining the depositional framework of Lower Carboniferous strata in northern Britain using stable-isotope chemostratigraphy
A.R. PRAVE, A.E. FALLICK, AND R.A.J. ROBINSON .............................................................. 143

Magnetic Susceptibility Stratigraphic Methodologies

Magnetostratigraphy susceptibility used for high-resolution correlation among Paleocene-Eocene boundary sequences in Egypt, Spain, and the U.S.A.
BROOKS B. ELLWOOD, AZIZ M. KAFAYF, AHMED KASSAB, JONATHAN H. TOMKIN,
ABDELAZIZ ABDELDAYEM, NAGEH OBAIDALLA, KELLI W. RANDALL, AND DAVID E. THOMPSON ......................................................... 155

Magnetostratigraphy susceptibility used for high-resolution correlation among Santonian (Upper Cretaceous) marine sedimentary sequences in the U.S. Western Interior Seaway and the Western Sinai Peninsula, Egypt
BROOKS ELLWOOD, AZIZ KAFAYF, AHMED KASSAB, ABDELAZIZ ABDELDAYEM,
NAGEH OBAIDALLA, RICHARD W. HOWE, AND PAUL SIKORA ...................................................... 167
Miscellaneous Stratigraphic Methodologies

Heavy-mineral stratigraphy of the Clair Group (Devonian-Carboniferous) in the Clair Field, West of Shetland, U.K.
ANDREW MORTON, CLAIRE HALLSWORTH, JOHN KUNKA, EWAN LAWS, SIMON PAYNE, AND DAVE WALDER ................................................................. 183

The sequence stratigraphic significance of paralic coal and its use as an indicator of accommodation space in terrestrial sediments
JENNIFER WADSWORTH, CLAUS DIESSEL, AND RON BOYD ................................................................. 201

A whole-rock geochemical approach to the recognition and correlation of “marine bands”
TIM J. PEARCE, DUNCAN McLEAN, JOHN E. MARTIN, KENNETH T. RATCLIFFE, AND DAVID S. WRAY .......................... 221

Index .................................................................................................................................................. 239
