Eco-Architecture III
Harmonisation between Architecture and Nature

Editors

S. Hernández
University of A Coruña, Spain

C.A. Brebbia
Wessex Institute of Technology, UK

W.P. De Wilde
Vrije Universiteit Brussel, Belgium
Contents

Section 1: Design with nature

Assessing a carbon neutral building approach
M. Bendewald & J. Brew ................................................................. 3

Ambiguous boundaries: a Japanese way of designing with nature
E. Beita ..................................................................................... 15

Homeostasis and perpetual change
C. Domin & L. Medlin ................................................................. 27

Fractal geometry: a tool for adaptability and ‘evolutionability’
F. Nakib ..................................................................................... 39

An open system model of ecological architecture
Y. Gu & R. Evans ......................................................................... 49

Passive design strategies for residential buildings in
a hot dry climate in Nigeria
O. K. Akande ................................................................................ 61

Sensitive apertures
A. Malo & B. A. McDonald .......................................................... 73

Embracing nature and culture: the tropical Malay spa design
A. Bahauddin & A. Abdullah ......................................................... 85

The principles of Vastu as a traditional architectural belief system
from an environmental perspective
H. Fazeli & A. Goodarzi ............................................................. 97

Architectural education and the idea of nature
C. C. Theis ................................................................................... 109
Contemporary practice in sustainable design: appraisal and articulation of emerging trend  
A. Sharma ................................................................. 119

Section 2: Ecological and cultural sensitivity

Traditional urbanism and lessons for global cities: the case of Isfahan  
B. A. Kazimee .................................................................. 133

Thermodynamics-based indicators for environmental management and sustainability policies  
F. M. Pulselli, S. Borsa, N. Marchettini & V. Niccolucci ........................................... 145

Vernacular architecture as a model for contemporary design  
E. Creanga, I. Ciotoiu, D. Gheorghiu & G. Nash .................................................. 157

Digital-Green architecture: a new design process that integrates digital technology and sustainable concepts  
J. Lee ............................................................................. 173

Socio environmental impact in eco-architecture  
I. Ibrahim ........................................................................ 185

Integrating aspects of cultural and environmental sensitivities into affordable housing in the Arab Gulf region  
A. Mokhtar ........................................................................ 197

The analysis and design of urban wetland: the Water Garden in Portland and Living Water park in Chengdu as case studies  
Z. Zeng & B. Li ............................................................... 209

Floating houses – chances and problems  
H. Stopp & P. Strangfeld .................................................. 221

Educational ecological architecture  
S. C. Santos, G. Klein & M. Despang .................................................. 235

Sustainable development and heritage: “trabocchi” and the rules for building on the coast  
M. C. Forlani, M. Borrone & D. Radogna .................................................. 245
Section 3: Design by passive systems

The use of green walls in sustainable urban context: with reference to Dubai, UAE
M. A. Haggag................................................................. 261

The role of passive systems in providing comfort in traditional houses in Isfahan: a case study of the Karimi house
Z. Khashei................................................................. 271

Sustainable solutions for spa design, Dubai, United Arabic Emirates: building envelope optimization and impact energy evaluation
D. Tanzj, C. Clemente, F. Cumo & G. Piras ........................................... 281

The harmonisation between architecture and nature in the desert of Iran with a hot and dry climate
F. Daneshpanah & M. Mousavizade ........................................... 295

Section 4: Life cycle assessment

Life cycle design of building elements: selection criteria and case study application
A. Basti.................................................................................. 309

Life cycle assessment of electricity generated by photovoltaic systems manufactured in Europe and installed in buildings in the city of Rome
L. de Santoli, A. Sferra & G. Piras ........................................... 321

Section 5: Quantifying sustainability in architecture
Special session by R. Smith

Quantifying eco-architecture
R. E. Smith........................................................................... 333

Renewable and durable building materials
L. Brock............................................................................... 345

Predicting green building performance over time: data mining untapped information in LEED
A. Jeerage, B. Erwine, S. Mallory & V. Agarwal..................... 355
Section 6: Resources and rehabilitation

An emergy evaluation of a medieval water management system: the case of the underground “Bottini” in Siena (Italy)
R. M. Pulselli, B. Rugani, E. Tiezzi & N. Marchettini

Editing Eisenhower: rethinking the urban segments of the U.S. interstate highway system
T. Shelton

Global benchmarking? Taking a critical look at eco-architectures
resource usage
T. Spiegelhalter, R. A. Architect & T. Planner

Section 7: Building technologies

Eco-technologies for energy efficient buildings in Italy
A. Boeri & D. Longo

A global tool for the architectural and environmental quality of materials integrated into the architectural design process
L. Fernandez, F. Bonneaud & S. Lorente

Planning the integration of new technologies for sustainability: case study of a school building’s restoration project in Rome
L. de Santoli, F. Fraticelli & F. Fornari

Building maintenance: a technology for resource conservation
M. Di Sivo & D. Ladiana

Addition of polymeric wastes as pore formers in ceramic lightweight bricks

Ubicomp, urban space and landscape
R. C. F. de Souza & M. L. Malard

Evolution of the American Zero Energy House
S. Russell

Smart architecture contribution to achieving sustainable architecture realization
M. Ghorbanzadeh & A. Nezami
Improving the shear resistance of adobe masonry for rebuilding and new construction purposes
_W. Jäger & J. Braun_ ........................................................................................................... 493

Section 8: Issues from education, research and practice
Special session by J. Stark

Eco-aesthetics: nurturing nature in the education of spatial design
_R. Reed_ .............................................................................................................................. 505

Materials affecting neonatal and environmental health
_A. Marshall-Baker_ ........................................................................................................... 515

The human side of the triangle: using green textile standards to address social responsibility
_J. Stark & M. Cudhea_ ...................................................................................................... 525

Section 9: Case studies

Sustainable buildings in Austria – performance indicators and implications on the construction industry
_S. Geissler & C. Spitzbart_ ............................................................................................... 539

Advanced technologies for sustainable building in the protected areas: two case studies in Italy
_F. Cinquepalmi, F. Cumo, F. Gugliermetti & V. Sforzini_ ................................................. 551

The mechanism of the _rawāshīn_: the case study of Makkah
_F. Al-Murahhem_ .............................................................................................................. 561

The climatic, constructional, and cultural primacy of the envelope: UR22, a case study
_V. Snyder_ .......................................................................................................................... 575

REIs: Renewable Energy Infrastructures v1.0
_C. Ford_ ................................................................................................................................ 587

Author Index ...................................................................................................................... 601
