A Concise Introduction to Additives for Thermoplastic Polymers

Johannes Karl Fink
Montanuniversität Leoben, Austria
## Contents

### 3 Fillers
- 3.1 Surface Modification
  - 3.1.1 Siloxanes
  - 3.1.2 Dispersion and Coupling Additives
- 3.2 Special Applications
  - 3.2.1 Flame Retardant Fillers
  - 3.2.2 Conductive Fillers
  - 3.2.3 Solder Precoated Fillers
  - 3.2.4 Nano Clays
  - 3.2.5 Mixed Matrix Membranes

### 4 Colorants
- 4.1 Physics Behind a Color
  - 4.1.1 Human Eye
  - 4.1.2 Tristimulus Values
  - 4.1.3 Color Spaces
- 4.2 Color Index
- 4.3 Test Standards
- 4.4 Pigments
- 4.5 Organic Colorants

### 5 Optical Brighteners
- 5.1 Basic Principles
- 5.2 Measurement
- 5.3 Inorganic Brighteners
- 5.4 Organic Optical Brighteners
  - 5.4.1 Reactive Optical Brighteners
  - 5.4.2 Melt Extrusion
  - 5.4.3 Photographic Supports

### 6 Antimicrobial Additives
- 6.1 Modes of Action
  - 6.1.1 Types of Irritations
- 6.2 Plasticizers
6.3 Special Formulations
  6.3.1 Contact Lenses
  6.3.2 Food Packaging
  6.3.3 Polymers with Inherent Antimicrobial Properties

References

7 Flame Retardants
  7.1 Mechanisms of Flame Retardants
    7.1.1 Flame Cooling of Halogens
  7.2 Smoke Suppressants
  7.3 Admixed Additives
  7.4 Bonded Additives
    7.4.1 Examples of Polymers

References

8 Lubricants
  8.1 Principle of Action
  8.2 Methods of Incorporation
    8.2.1 Conventional Method
    8.2.2 Separate Delivery of the Lubricant
  8.3 Types of Lubricants
    8.3.1 Alcohols
    8.3.2 Fatty Acids, Esters and Amides
    8.3.3 Waxes
    8.3.4 Polymeric Lubricants
  8.4 Special Applications
    8.4.1 PVC
    8.4.2 Chlorinated PVC
    8.4.3 Electrically Conductive Polymers

References

9 Antistatic Additives
  9.1 Types of Additives
  9.2 Areas of Application
  9.3 Additives in Detail
    9.3.1 Conventional Additives
    9.3.2 Polymeric Additives
9.3.3 External Antistatic Additives 101
9.3.4 Intrinsically Antistatic Compositions 101
9.3.5 Conductive Fillers 101
References 104

10 Slip Agents 107
  10.1 Basic Principles of Action 107
  10.2 Compounds 109
  10.3 Special Formulations 110
    10.3.1 Poly(ethylene terephthalate) 110
    10.3.2 Formulations for Poly(ethylene) 111
References 111

11 Surface Improvers 113
  11.1 Additives 114
    11.1.1 Fluorocarbon Compounds 114
    11.1.2 Acrylics 114
    11.1.3 Modified Pigments 115
    11.1.4 Organic Salts 116
References 116

12 Nucleating Agents 119
  12.1 Crystalline Polymers 120
    12.1.1 Crystal Structures 120
    12.1.2 Modification of Properties by Crystallinity 120
  12.2 Experimental Methods 121
    12.2.1 Nucleation Technologies 121
    12.2.2 Characterization of Polymer Crystallization 121
  12.3 Classes of Nucleating Agents 122
    12.3.1 Inorganic Nucleating Agents 122
    12.3.2 Sorbitol Compounds 123
    12.3.3 Phosphates 124
    12.3.4 Carbon Nanotubes 124
    12.3.5 Coupled Nucleating Agents 124
12.4 Crystallization Accelerators 124
12.5 Clarifying Agents 125
References 125

13 Antifogging Additives 127
13.1 Field of Use 127
13.2 Principles of Action 128
   13.2.1 Thermodynamics of Surfaces 128
13.3 Conventional Compounds 130
13.4 Compounds for Grafting 133
References 135

14 Antiblocking Additives 137
14.1 Examples of Uses 138
   14.1.1 Film Resins 138
   14.1.2 Sealable Coatings 140
   14.1.3 Membranes 141
   14.1.4 Poly(vinyl butyral) 142
References 144

15 Hydrolysis 145
15.1 Hydrolytic Degradation 145
   15.1.1 Ordinary Hydrolysis 145
   15.1.2 Enzymatic Hydrolysis 146
   15.1.3 Stabilization 146
15.2 Polymers 146
   15.2.1 Poly(ester)s 147
   15.2.2 Poly(ester urethane)s 147
   15.2.3 Poly(lactide)s 148
References 149

16 Dehydrochlorination Stabilizers 151
16.1 Dehydrochlorination of PVC 151
16.2 Stabilizers 152
   16.2.1 Alkyl Tin Compounds 154
   16.2.2 Mixed Metal Compounds 155
   16.2.3 β-Diketones 155
Contents

16.2.4 Epoxidized fatty acids 155
16.2.5 Hydrotalcite Clays 156
16.2.6 Zeolites 157
16.2.7 Costabilizers 158
References 158

17 Acid Scavengers 161
17.1 Acid Scavenging 161
17.2 Examples of Formulation 162
   17.2.1 Poly(olefin)s 162
   17.2.2 Poly(ethylene terephthalate) 163
   17.2.3 Poly(urethane)s 163
References 163

18 Metal Deactivators 165
18.1 Action of Metals in Polymers 165
18.2 Usage 166
   18.2.1 Residues of Catalysts 166
   18.2.2 Metallic Reinforcing Parts 166
18.3 Examples of Metal Deactivators 167
   18.3.1 Side Effects 169
References 170

19 Oxidative Degradation 173
19.1 Autoxidation 173
19.2 Inhibition of Autoxidation 174
References 183

20 Degradation by Light 185
20.1 Photolysis 189
   20.1.1 Redox Catalysis 190
   20.1.2 Scavenging 190
20.2 Photooxidation 191
20.3 UV Stabilizers 193
References 195

21 Blowing Agents 197
21.1 Blowing Agents 197
   21.1.1 Physical Blowing Agents 198
21.1.2 Chemical Blowing Agents 199
21.2 Ozone Depletion Potential 202
21.3 Test Methods 203
21.4 Special Applications 203
  21.4.1 Poly(urethane) Foams 203
  21.4.2 Poly(imide) Foams 205
  21.4.3 Poly(ethylene) Foams 205
References 206

22 Compatibilizers 209
  22.1 Estimation of Compatibility 210
    22.1.1 Glass Transition Temperature 210
    22.1.2 Hildebrand Solubility Parameters 211
  22.2 Compatibilizers 215
    22.2.1 Classification 217
    22.2.2 Reactive Processing 221
  22.3 Special Examples 221
    22.3.1 Block Copolymers as Compatibilizers 221
    22.3.2 Poly(olefin) Blends 222
    22.3.3 Poly(amide) Blends 223
    22.3.4 Poly(carbonate) Blends 224
    22.3.5 Composites of PVC and Cellulosic Materials 225
    22.3.6 Packaging Applications 226
References 227

23 Prediction of Service Time 233
  23.1 Accelerated Aging 233
    23.1.1 Cumulative Material Damage 233
    23.1.2 Arrhenius Extrapolation 234
    23.1.3 Interference of Phase Transitions 235
  23.2 Theory of Critical Distances 235
  23.3 Monte Carlo Methods 236
  23.4 Issues in Matrix Composites 236
References 236

24 Safety and Hazards 239
  24.1 Plasticizers 239
    24.1.1 Di(2-ethylhexyl)phthalate 239
Contents

24.1.2 Ingestion of PVC 240
24.1.3 Tricresyl Phosphate 242
24.2 Flame Retardants 242
   24.2.1 HET-Acid 242
   24.2.2 Brominated Diphenyl Ethers 243
24.3 Antifogging Agents 243
24.4 Other 244
   24.4.1 Bisphenol A 244
   24.4.2 Azodicarbonamide 244
References 245
