Durham, North Carolina
CONTENTS

Preface v

Keynote Papers

Maximal heat transfer density: optimal distribution of discrete heat sources on vertical walls in channels and enclosures with natural convection, A. K. da Silva, S. Lorente and A. Bejan 3

Industrial refrigeration and ammonia enhanced heat transfer, Z. Ayub 13

Visualization of micro- and macromixing phenomena in stirred vessels by optical methods, D. Mewes and K. Kling 25

Least-energy optimization of air-cooled heat sinks for sustainability – theory, geometry, and material selection, A. Bar-Cohen, R. Bahadur and M. Iyengar 33

Mechanistic models for pool nucleate boiling heat transfer: input and validation, D. Kenning, I. Golobić, H. Xing, M. Bašelj, V. Lojk and J. von Hardenberg 53

Heat and mass transfer for the diffusion driven desalination process, J. F. Klausner, Y. Li and R. Mei 69

Transport phenomena in heterogeneous media based on volume averaging theory, I. Catton 79

The effect of surfactants on boiling heat transfer, G. Hetroni, M. Gurevich, A. Mosyak, E. Pogrebnyak, R. Rozenblit and Z. Segal 91

Cool sound: the future of refrigeration? Thermodynamic and heat transfer issues in thermoacoustic refrigeration, C. Herman 99

The characterization of flow regimes with power spectral density distributions of pressure fluctuations during condensation in smooth and enhanced tubes, L. Liebenberg and J. P. Meyer 109

Droplet - surface interactions, E. N. Ganić and Š. Šikalo 121

Convective heat transfer control using magnetic and electric fields, G. S. Dulikravich and M. J. Colaço 133

The long term thermal behavior of housing constructed according to improved thermal standards, A. F. Emery and C. J. Kippenhan 145

The exergy fields in transport processes: their calculation and use, N. Lior, W. Sarmiento-Darkin, H. S. Al-Sharqawi 155

Fundamentals

One-dimensional model for the combined heat transfer in open-cell metal foam, N. Dukhan, P. D. Quinones, C. Briano and J. Fontáné 183

Double diffusive convection in a fluid-porous vertical enclosure, D. Gobin, B. Goyeau and A. Neculae 191
Continuum thermodynamic modeling of drying capillary particulate materials via an improved edge-based algorithm, A.G. Malan and R.W. Lewis 199

Theoretical study of the transfer processes in desiccant Microsystems, C.E. Panait, M. Tarawneh and A. Popescu 205

Thermodynamic analysis in a partly porous annular heat exchanger, N. Allouache and S. Chikh 211

Non-equilibrium diffusion controlled melting and re-solidification of thin metal layers on a reactive substrate, H. Zhao and D.P. Sekulic 217

Theoretical prediction of the thermal conductivity of frozen foods, F. Gori, S. Corasaniti and V.R. Tarnawski 223

Influence of pressure fluctuations distribution on local heat transfer on flat surface impinged by turbulent free jet, D.L. Boguslawski 231

Turbulent heat transfer to heavy liquid metals in circular tubes, X. Cheng, H.Y. Chen, N.I. Tak and A. Batta 237

Experimental investigations of heat transfer from a circular pipe to lead coolant with controlled content of oxygen impurity, A.V. Beznosov, A.V. Semyonov, S.S. Pinaev, D.V. Davidov, T.A. Bokova, Yu.I. Orlov, A.V. Zhukov and A.D. Efanov 249

Temperature and pressure measurements using oxygen fluorescence, T. Semenic, B.A. Blake and I. Catton 253

Dynamic of wetting line of a spreading droplet, S. Sikalo, E.N. Ganic and C. Tropea 259

Heat transfer between deformable magnetic beds and immersed surfaces. cases of gas-fluidized beds, J. Hristov 267

An improved form for correlating natural convection heat transfer data, E. F. Adiutori 275

Natural convection inside square cavities partially heated from below, C. Cianfrini, M. Corcione and P.P. Dell’Omo 281

Heat transfer during air flow around a cylinder, W. Nowak and A.A. Stachel 291

Effect of absorption of solar radiation in glass cover(s) on heat transfer coefficients in flat plate solar collectors with single and double glazing, N. Akhtar and S.C. Mullick 299

Double-diffusive finger convection near neutral buoyancy, O.P. Singh, K.R. Sreenivas and J. Srinivasan 307

Solid mass fluxes and local heat transfer to the walls in upper part of CFB riser, G.A. Ryabov, O.M. Folomeev and D.A. Shaposhnik 315

Crust prevention on heat transfer surfaces using combined magnetic and ultrasonic methods, P. Pena, O. Georgescu, S. Iascan and V. Iacob 323

Energy Systems

New laser based method for non-intrusive measurement of available energy loss and local entropy production, G.F. Naterer and O.B. Adeyinka 329
Thermodynamical analysis of the human thermal comfort,  
M. Prek 335

Energonics beyond thermodynamics,  
V.V. Jinescu 341

Optimization of the energy systems in the plastics chromium-plating industry: plant and system analysis and reconfiguration in a case study, M. Boscolo and E. Padoano 349

Numerical simulation of scalp cooling to prevent chemotherapy-induced alopecia,  
F.-P.E.M. Janssen, G.M.J. van Leeuwen and A.A. van Steenhoven 357

Modeling patient temperature for improved thermal management during surgery,  

Investigation of influence of heat factors upon a grinding process,  
S.F. Lushpenko, E.V. Ostroverkh and M.V. Surdu 369

Heat transfer study in the elements of an absorption refrigeration system operating to partial heat load to generator, I. Carvajal-Mariscal, R. Aguilar and A. Zacarias 377

Method of absorption applied to a unit of micro tangential filtration for the purification of protein solutions, R. Miri, R. Joulié and G.M. Rios 383

Heat transfer analysis of a channel plate heat exchanger,  
M.H. Al-Hajeri and A. Wilr 391

Control of grinding temperature by high speed air jets,  
D. M. Babic, D. B. Murray and A. Torrance 399

Electronics Cooling and Thermal Management

Steady-state thermal mapping of electronic devices and circuits with multi-layer stack assembly by analytical relationships, M. Montesi, P.E. Bagnoli, G. Pasquinelli and C. Casarosa 413

Thermal characterisation of rectangular cooling shapes in heat generating mediums, – a three-dimensional investigation, J. Dirker, A.G. Malan and J.P. Meyer 421

Miniature heat pipes for electronic equipment thermal control,  
L. L. Vasiliev, A.G. Kulakov, L. L. Vasiliev, M.I. Rabetsky and A. A. Antukh 429

Equipment

Numerical simulation of the fuel-oil cooling in the sunken prestige tanker,  
X.F. Grau, I. Cuesta, J. Pallares and A. Fabregat 439

Experimental thermal behaviour of a power plant reheater,  

Numerical study of the influence of irregular fouling distributions inside the tubes of a power plant condenser, I. S. Ramón, M. P. González 455

Water-cooling system with flat-plate solar radiators,  
I. Baten and V. Soldo 463
Investigation to the stability of a natural circulation two-pass boiler,
H. Walter and W. Linzer

Energy consumption analysis of domestic oven,
M. Penšek, N. Holeček, H. Gjerkeš and I. Golobič

Analysis of heat conduction in the stator of an electrical generator,
J.A. Esfahani, M. Razazadeh and A. Kashani

A Numerical analysis of heat transfer and fluid flow in rotary regenerative air pre-heaters,
S. Alagic, N. Stosic, A. Kovacevic and I. Buljubasic

Experimentation and simulation of thermal energy storage system with non-phase change materials,
T. Soontornchainacksaeng

Long-term performance of household refrigerating appliances,
T. Ledinek, B. Skrt, M. Penšek and I. Golobič

Evaluation of compact heat exchanger technologies for hybrid fuel cell and gas turbine system recuperators,
M.R. Amin and J. Lindstrom

Fouling and pressure drop in heat exchangers used in a crude oil pre-heat train,
L. Oufir, A. Mouheb, S. Zegai and S. Hasbellaoui

Prediction of soot emissions from direct injection diesel engine,
A.K.L. Bhagat and N.L. Bhagat

Blockage effect of the centrifugal cooling fans,

Experimental analysis of hydrodynamics and influence of temperature in a food dryer,
K. Daoud and H. Abdiche

Environmental

The influence of wind speed, terrain and ventilation system on the air change rate of a single-family house,
B. Mattsson

Practical consequences of the altered thermal performance of the attic loose-fill insulation due to induced air movement,
M. Serkitjis and A. Sasic Kalagasidis

Utilisation of existing deep geological wells for acquisitions of geothermal energy,
T. Kujawa, W. Nowak and A.A. Stachel

Turbulence model of penetrative convection and pollutant dispersion above urban heat island in stably stratified environment,
A. Kurbatskii and L. Kurbatskaya

Investigations of combustion process in stove fired on biomass

Boiling and Phase Change

Electric field effect on bubble detachment in reduced gravity environment,
E. Iacona, C. Herman, S. Chang and Z. Liu

Gravity independent subcooled flow boiling heat transfer regime,
J.S. Bower and J.F. Klausner

Bubble detachment and coalescence under the influence of electric fields,
C. Herman, D. Mewes, Z. Liu and J. Radke
Self-aggregation of vapor-liquid phase transition and inner structure of a boiling nucleus, 
X.D. Wang, Y. Tian, X.F. Peng and B.X. Wang 603

Modelling of vertical wall influence on the single bubble motion, 
D. Mikielewicz and J. Wajs 611

Simulation of void fraction profile evolution in subcooled nucleate boiling in 
a vertical annulus with a bubble-tracking model, I. Kljenak and B. Mavko 617

A contribution to multidimensional two-fluid modelling of subcooled boiling flow, 
B. Koncar 627

Propagation of shock disturbances in a porous medium washed by the two-phase flow, 
E.A. Tairov, B.G. Pokusayev and M.Yu. Gritsenko 635

A wall heat transfer model for subcooled boiling flow, 
H. Steiner, A. Kobor and L. Gebhard 643

Modelling of flow boiling process in small diameter tubes, 
D. Mikielewicz and J. Mikielewicz 651

At shock boiling of liquid at the wall, 
E.A. Tairov and M.Yu. Gritsenko 657

A novel concept for boiling heat transfer enhancement, 
D.W. Zhou 665

Enhanced pool boiling CHF from modulated porous layer coating, 
K. Forjancič, D. Rajselj and I. Golobič 673

Modeling of steam condensation on the walls of a large enclosure using 
a computational fluid Dynamics Code, I. Kljenak, I. Bajsic and M. Babic 679

The study of convective condensation of binary vapors of partially miscible liquids, 
O.A. Lonshchakov and V.G. D'yakonov 687

Homogenisation of thermodynamic properties in natural draft cooling towers, 
M. Rotar, B. Sirok, M. Novak, J. Vanormelingen, F. Van Dijen and J. Defloor 693

Today's condition and the future of the cooling towers, 
S.V. Lakovic, M.M. Stoiljkovic and M.S. Lakovic 701

Analysis of loop heat pipe performance under varying wick load, 
A.H. Reis, A.F. Miguel and M. Aydin 705

A numerical analysis of thermosolutal melting, 
T.J. Scanlon and M.T. Stickland 711

Momentum transport modeling including solid phase movement and nucleation 
for direct chill casting processes, B. Sarler and D.W. Pepper 717

The use of a phase change material within a cylinder wall in order to detect knock 
in a gas SI Engine, J. Bellettre, E. Ollivier and M. Tazerout 725

Micro and Nano Scale Thermal Phenomena

Heat transfer during production of carbon nanotubes by the electric-arc process, 
A.G. Ostrogorsky and C. Marin 735
Electronic component cooling enhancement using nanofluids in a radial flow cooling system,  
G. Roy, C.T. Nguyen and M. Comeau  

Boltzmann transport equation-based thermal modeling approaches for microelectronics,  
S.V.J. Narumanchi, J.Y. Murthy and C.H. Amon  

Friction factor and pressure drop oscillations during flow boiling of water in a vertical micro channel,  
E. Sobierska, J. Shuai, R. Kulenovic, R. Merz and M. Groll  

Two-phase heat transfer inside minichannels: experimental measurements of the condensation heat transfer coefficient,  
A. Cavallini, G. Censi, D. Del Col, L. Doretti, M. Matkovic, L. Rossetto and C. Zilio  

Improved experimental device for thermal phenomena studies on transition to micro-scale,  
A. Popescu, J.R. Welty, D.M. Pfund, E.C. Panaite and D.V. Stadnileanu  

Numerical Heat Transfer  

Numerical computation of turbulent conjugate heat transfer in air heater,  
M. Hribersek, Z. Zunic, B. Sirok and L. Skerget  

A matrix-free algorithm for modeling non-linear heat transfer in hybrid unstructured grids,  
A.G. Malan and J.P. Meyer  

Application of meshless methods for thermal analysis,  
D.W. Pepper and B. Sarler  

Convective heat transfer inside rotational cascades with flat blades,  
M. Mori, L. Novak and M. Sekavenik  

Numerical investigation on the effects of nozzle geometry on the performance of a pulse detonation engine,  
M.R. Amin, H.Z. Rouf and J.-L. Cambier  

3-D modelling of the interaction of discrete hole injections with a compressible transversal flow,  
D. Cherrarred, R. Dizene and S. Benmansour  

Numerical study on effective conductivity due to thermal dispersion in periodic porous media,  
J.Y. Xu, T. J. Lu and H.P. Hodson  

Numerical simulation on mixed convection in a porous medium heated by a vertical cylinder,  
L. Li and S. Kimura  

Comparison between free and rigid boundaries effects on soret driven thermosolutal convection in a shallow porous enclosure,  
M. Bourich, M. Hasnaoui, A. Amahmid and M. Mamou  

Application of computational fluid dynamics and pedestrian-behavior simulations to the design of task-ambient air-conditioning systems of a subway station,  
K. Fukuyo  

Some features of flow and particle transport in porous structures,  
M. Aydin, G. Balik, A. F. Miguel and A. H. Reis  

Effect of asymmetry on the steady thermal convection in a vertical torus filled with a porous medium,  
A. Postelnicu, N. Scurtu  

A numerical model for degradation and combustion of poly methyl methacrylate (PMMA),  
J.A. Esfahani and A. Kashani  

Simulation of hot gas behaviour from fuel combustion inside the galvanizing furnace,  
T. Soontornchainaksaeng and J. Pattawanitch
Comparison of flow characteristics of centrifugal compressors by numerical modelling of flow,
Z. Guzovic, M. Baburic and B. Matijasevic 891

Turbulence modelling of swirling flow in a long straight circular pipe,
Z.M. Stevanovic, M.A. Sijercic, S.V. Belosevic and G.S. Ilic 901

Numerical modeling of microwave heating in processing of various materials,
E.F. Kent and S. Kent 907

Heat transfer distribution for a free/porous system with forced convection
and heat generation - numerical study, A.C.M. Sousa 913

Analysis of heat transfer and fluid movement in case of fire in a road tunnel,
P. Vidmar and S. Petelin 921

Fire ventilation in road tunnels: some investigations about critical air velocity,
F. Peron, L. Porcianni and M. Strada 929

Numerical and experimental simulation of turbulent ventilation in aircraft cabins,
J. Bosbach, J. Pennecot, C. Wagner, M. Raffel, T. Lerche and S. Repp 937

Calculus elements for aircraft cockpit pressure system design,
R. Lungu, A.N. Tudosie and L. Dinca 943

Wind tunnel experimental model for the measurement of the longitudinal
movement characteristics of the aircraft, R. Lungu, L. Dinca and A. Tudosie 947

The Galerkin method solution of the conjugate heat transfer problems for the cross-flow conditions,
A. Horvat, B. Mavko and I. Catton 951

On the length of the computational domain in the DNS of the heat transfer in the fully
developed turbulent channel flow, R. Bergant and I. Tiselj 959

Heat Transfer Enhancement

A note on the enhancement of impinging jets,
D.W. Zhou 969

Compound heat transfer enhancement – performance characteristics of some “rough surfaces”
with Twisted Tape Inserts, V. Zimparov and P. Penchev 975

Experimental and numerical heat transfer enhancement in a channel flow,
M. Wierzbowski and J. Slasiek 983

The enhancement of heat transfer in shell and tube heat exchangers with twisted-tape,
V. Iacob, D.C. Popescu, Gh. Constantinescu and I. Ursache 989

Augmentation of heat transfer coefficient using various tube - fin combinations for condenser

Thermal characteristics of compact heat exchangers using finned pipes with inclined fins,
I. Carvajal-Mariscal, F. Sanchez, G. Polupan and P. Quinto 1001

Ice melting driven by natural convection in the rectangular cavity filled with water,
Z. Virag, M. Živić and A. Galović 1007

Author index 1015
