Chaotic Systems
Theory and Applications

Selected Papers from the 2nd Chaotic Modeling and Simulation International Conference (CHAOS2009)

Chania, Crete, Greece 1 – 5 June 2009

editors

Christos H Skiadas
Technical University of Crete, Greece

Ioannis Dimotikalis
Technological Educational Institute of Crete, Greece
Contents

Preface v

Honorary Committee and International Scientific Committee vi

Keynote Talks viii

The Influence of Machine Saturation on Bifurcation and Chaos in Multimachine Power Systems 1
  Majdi M. Alomari and Jian Gue Zhu

Chaos in Multiplicative Systems 9
  Dorota Aniszewska and Marek Rybaczuk

  Jan Awrejcewicz and Grzegorz Kudra

Some Issues and Results on the EnKF and Particle Filters for Meteorological Models 27
  Christophe Baehr and Olivier Pannekoucke

Local and Global Lyapunov Exponents in a Discrete Mass Waterwheel 35
  David Becerra Alonso and Valery Tereshko

Complex Dynamics in an Asset Pricing Model with Updating Wealth 43
  Serena Brianzoni, Cristiana Mammana, and Elisabetta Michetti

Chaotic Mixing in the System Earth: Mixing Granitic and Basaltic Liquids 51
  Cristina De Campos, Werner Ertel-Ingrisch, Diego Perugini, Donald B. Dingwell, and Giampiero Poli

Multiple Equilibria and Endogenous Cycles in a Non-Linear Harrodian Growth Model 59
  Pasquale Commendatore, Elisabetta Michetti, and Antonio Pinto

Hick Samuelson Keynes Dynamic Economic Model with Discrete Time and Consumer Sentiment 67
  Loretti I. Dobrescu, Mihaela Neamțu, and Dumitru Opris

On the Entropy Flows to Disorder 75
  C. T. J. Dodson
Linear Communication Channel Based on Chaos Synchronization
Victor Grigoras and Carmen Grigoras

Maxwell-Bloch Equations as Predator-Prey System
A. S. Hacinliyan, O. Ö. Aybar, I. Kusbeyzi, I. Temizer, and E. E. Akkaya

Identifying Chaotic and Quasiperiodic Time-Series Candidates for Efficient Nonlinear Projective Noise Reduction
Nada Jevtic and Jeffrey S. Schweitzer

Chaos from the Observer’s Mathematics Point of View
Dmitriy Khots and Boris Khots

New Models of Nonlinear Oscillations Generators
Alexander A. Kolesnikov

Nonlinear System’s Synthesis – The Central Problem of Modern Science and Technology: Synergetics Conception. Part II: Strategies of Synergetics Control
Anatoly A. Kolesnikov

Synergetic Approach to Traditional Control Laws Multi-Machine Power System Modification
Anatoly A. Kolesnikov and Andrew A. Kuzmenko

Dynamic Stability Loss of Closed Circled Cylindrical Shells Estimation Using Wavelets
V. A. Krysko, J. Awrejcewicz, M. Zhigalov, V. Soldatov, E. S. Kuznetsova, and S. Mitskevich

The Application of Multivariate Analysis Tools for Non-Invasive Performance Analysis of Atmospheric Pressure Plasma
V. J. Law, J. Tynan, G. Byrne, D. P. Dowling, and S. Daniels

Chaos Communication: An Overview of Exact, Optimum and Approximate Results Using Statistical Theory
Anthony J. Lawrance

Dynamics of a Bouncing Ball
Shiuian-Ni Liang and Boon Leong Lam

Symmetry-Break in a Minimal Lorenz-Like System
Valerio Lucarini and Klaus Fraedrich
Sub-Critical Transitions in Coupled Map Lattices

P. Manneville

Quantum Scattering and Transport in Classically Chaotic Cavities: An Overview of Old and New Results

Pier A. Mello, Victor A. Gopar, and J. A. Méndez-Bermúdez

Parametric Excitation of a Longwave Marangoni Convection

Alexander B. Mikishev, Alexander A. Nepomnyashchy, and Boris L. Smorodin

Symmetry Broken in Low Dimensional N-Body Chaos

David C. Nian and Chou Hsin Chin

On Markov Processes: A Survey of the Transition Probabilities and Markov Property

Gabriel V. Orman

Qualitative Dynamics of Interacting Classical Spins

Leonidas Pantelidis

A Transmission Line Model for the Spherical Beltrami Problem

C. D. Papageorgiou and T. E. Raptis

Two Aspects of Optimum CSK Communication: Spreading and Decoding

Theodore Papamarkou

A Numerical Exploration of the Dynamical Behaviour of q-Deformed Nonlinear Maps

Vinod Patidar, G. Purohit, and K. K. Sud

Spatiotemporal Chaos in Distributed Systems: Theory and Practice

George P. Pavlos, A. C. Iliopoulos, V. G. Tsoutsouras, L. P. Karakatsanis, and E. G. Pavlos

An Enhanced Tree-Shaped Adachi-Like Chaotic Neural Network Requiring Linear-Time Computations

Ke Qin and B. John Oommen

Clustering of Inertial Particles in 3D Steady Flows

Themistoklis Sapsis and George Haller
Contents

A Two Population Model for the Stock Market Problem
Christos H. Skiadas

Electron Quantum Transport through a Mesoscopic Device: Dephasing and Absorption Induced by Interaction with a Complicated Background
Valentin V. Sokolov

Composing Chaotic Music from a Varying Second Order Recurrence Equation
Anastasios D. Sotiropoulos and Vaggelis D. Sotiropoulos

Music Composition from the Cosine Law of a Frequency-Amplitude Triangle
Vaggelis D. Sotiropoulos and Anastasios D. Sotiropoulos

Chaos in a Fractional-Order Jerk Model Using Tanh Nonlinearity
Banlue Srisuchinwong

Nonlinear Systems in Brunovsky Canonical Form: A Novel Neuro-Fuzzy Algorithm for Direct Adaptive Regulation with Robustness Analysis
Dimitris C. Theodoridis, Yiannis Boutalis, and Manolis A. Christodoulou

Routh-Hurwitz Conditions and Lyapunov Second Method for a Nonlinear System
Ömür Umut

Atomic de Broglie-Wave Chaos
V. O. Vitkovsky, L. E. Konkov, and S. V. Prants

Chaotic Behavior of Plasma Surface Interaction. A Table of Plasma Treatment Parameters Useful to the Restoration of Metallic Archaeological Objects
C. L. Xaplantcris and E. Filippaki

Simulation of Geochemical Self-Organization: Acid Infiltration and Mineral Deposition in a Porous Ferruginous Limestone Rock
Farah Zaknoun, Houssam El-Rassy, Mazen Al-Ghoul, Samia Al-Joubeily, Tharwat Mokalled, and Rabih Sultan
