New Approaches to Hydrological Prediction in Data-sparse Regions

Edited by:
KORAY K. YILMAZ
ISMAIL YUCEL
HOSHIN V. GUPTA
THORSTEN WAGENER
DAWEN YANG
HUBERT SAVENIJE
CHRISTOPHER NEALE
HARALD KUNSTMANN
JOHN POMEROY

Proceedings of Symposium HS.2 at the Joint Convention of
The International Association of Hydrological Sciences (IAHS) and
The International Association of Hydrogeologists (IAH) held in
Hyderabad, India, 6–12 September 2009.

Publication of this volume was sponsored by:

The Association of Hydrologists of India,
and
The National Geophysical Research Institute, Hyderabad, India

IAHS Publication 333
in the IAHS Series of Proceedings and Reports
Contents

Preface by Koray K. Yilmaz, Ismail Yucel, Hoshin V. Gupta, Thorsten Wagener, Dawen Yang, Hubert Savenije, Christopher Neale, Harald Kunsmann & John Pomeroy v

1 Hydrological Modelling in Poorly Gauged and Ungauged Basins

Assessing parameters of physically-based models for poorly gauged basins
Lev Kuchment & Alexander Gelfan

A universal approach to runoff processes modelling: coping with hydrological predictions in data-scarce regions
O. M. Semenova & T. A. Vinogradova

Regularized calibration of a distributed hydrological model using available information about watershed properties and signature measures
Prafulla Pokhrel & Hoshin V. Gupta

Landscape dependent derivation of J2000 model parameters for hydrological modelling in ungauged basins
Markus Wolf, Björn Pfennig, Peter Krause & Wolfgang-Albert Flügel

Development of an extended spatially distributed routing scheme and its impact on process oriented hydrological modelling results
Björn Pfennig, Holm Kipka, Markus Wolf, Manfred Fink, Peter Krause & Wolfgang-Albert Flügel

Development of a hydrological response index to represent TOPMODEL parameters
Zhang Youjing, Chen Bo & He Chuan

Calibration of a semi-distributed hydrological model using discharge and remote sensing data
Lal P. Muthuwatta, Martijn J. Booij, Tom H. M. Rientjes, M. G. Bos, A. S. M. Gieske & Mobin-ud-Din Ahmad

Modelling the long-term impact of climate change on rainfall–runoff processes over a large Sudano-Sahelian catchment
Denis Ruelland, Vincent Guinot, Florent Levavasseur & Bernard Cappelaere

A probability distribution function approach to modelling rainfall–runoff response for data-sparse catchments
Binquan Li & Zhongmin Liang

Hydrograph transposition between basins through a geomorphology-based deconvolution–reconvolution approach
Houda Boudhraa, Christophe Cudennec, Mohamed Slimani & Herve Andrieu

Towards the development of a consistent uncertainty framework for hydrological predictions in South Africa
Evison Kapangaziwiri, Denis Hughes & Thorsten Wagener

Can discharge assimilation methods be used to improve flood forecasting when few data are available?
Lionel Berthet, Maria-Helena Ramos, Charles Perrin, Vazken Andréassian & Cécile Loumagne

Modelling hydrological time series data using wavelet neural network analysis
Y. R. Satyaji Rao & B. Krishna

An evaluation of multi-basin hydrological modelling for predictions in ungauged basins
Chantal Donnelly, Joel Dahne, Göran Lindström, Jörgen Rosberg, Johan Strömqvist, Charlotte Pers, Wei Yang & Berit Arheimer

Using recently developed global data sets for hydrological predictions
Johan Strömqvist, Joel Dahné, Chantal Donnelly, Göran Lindström, Jörgen Rosberg, Charlotte Pers, Wei Yang & Berit Arheimer
2 Hydrometeorology and Climate Change Assessment

Hydro-meteorological predictions from GCM simulations: downscaling techniques and uncertainty modelling Pradeep Mujumdar, Subimal Ghosh & Deepashree Raje

Coupling VIC with GCM models to predict climate change impact in the Hanjiang basin, China Shenglian Guo, Jing Guo, Jun Zhang & Hua Chen

Runoff modelling within the Canadian Regional Climate Model (CRCM): analysis over the Quebec/Labrador watersheds Biljana Music, Anne Frigon, Michel Slivitzky, André Musy, Daniel Caya & René Roy

Development of a coupled land-surface and hydrology model system for mesoscale hydrometeorological simulations Fei Yuan, Harald Kunstmann, Chuanguo Yang, Zhongbo Yu, Liliang Ren, Benjamin Fersch & Zhenghui Xie

A study coupling a large-scale hydrological model with a regional climate model Bin Yong, Liliang Ren, Lihua Xiong, Xiaoli Yang, Wanchang Zhang, Xi Chen & Shanhu Jiang

Large-scale water balance estimations through regional atmospheric moisture flux modelling and comparison to GRACE signals Benjamin Fersch, Harald Kunstmann, Nico Sneeuw & Balaji Devaraju

Assessment of flood events in the data-sparse Brahmaputra Basin in northeast India U. C. Sharma & Vikas Sharma

3 Remote Sensing Applications in Hydrology

Evaluation of a satellite-based near real-time global flood prediction system Koray K. Yilmaz, Robert F. Adler, Yang Hong & Harold F. Pierce

Estimating precipitation for poorly-gauged areas in western China Junliang Jin, Guihua Lu & Zhiyong Wu

TRMM rainfall data estimation over the Peruvian Amazon-Andes basin and its assimilation into a monthly water balance model Waldo Sven Lavado Casimiro, David Labat, Jean Loup Guyot, Jostyane Ronchail & Juan Julio Ordoñez

Prospect for TRMM in rainfall estimates: a case study in the Laohahe basin, China Hong Wang, Liliang Ren & Xiaoli Yang

Evaluation of the Hydro-Estimator satellite rainfall algorithm and its utility in hydrological prediction in a mountainous region Ismail Yucel, Robert J. Kuligowski & David Gochis
Spatially distributed evapotranspiration estimation using remote sensing and ground-based radiometers over cotton at Maricopa, Arizona, USA. Andrew N. French, Douglas Hunsaker, Kelly Thorp & Thomas Clarke

Applicable algorithm to map daily evapotranspiration using MODIS images for the Laohahe River basin, northeastern China. Xiuqin Fang, Liliang Ren, Qiongfang Li, Qiuan Zhu, Xiaofan Liu & Yonghua Zhu

4 Characterizing Rainfall Variability and Its Impacts on Hydrological Modelling

Inverting the hydrological cycle: when streamflow measurements help assess altitudinal precipitation gradients in mountain areas. Audrey Valery, Vazken Andréassian & Charles Perrin

Rainfall variability and uncertainty in water resource assessments in South Africa. Tendai Sawunyama & Denis Hughes

Robust and flexible hydroinformatics to account for rainfall space–time variability in a data-sparse region. Sameh Chargui, Christophe Cudennec, Mohamed Slimani, Jean-Christophe Pouget & Jalel Aouissi

Drought forecast using an artificial neural network for three hydrological zones in San Francisco River basin, Brazil. Celso Augusto G. Santos, Bruno S. Morais & Gustavo B. L. Silva

Regional frequency analysis of annual precipitation in data-sparse regions using large-scale atmospheric variables. P. Satyanarayana & V. V. Srinivas

Impacts of rainfall uncertainty on water resource planning models in the Upper Limpopo basin, Botswana. P. K. Kenabatho, N. R. McIntyre & H. S. Wheater

A high-resolution hierarchical space–time framework for single storm events and its application for short-term rainfall forecasting. Juan Qin, Michael Leonard, George Kuczera, Mark Thyer, Andrew Metcalfe & Martin Lambert
