PART 1  GETTING STARTED

1 Introducing the Restlet Framework 3

1.1 "Hello World" with Restlet 5
   Coding a ServerResource subclass 5 • Running the server 6
   Using the ClientResource class 7

1.2 Overview of the Restlet Framework 8
   Main benefits of the Restlet API 9 • Overall design of the
   Restlet Framework 10 • Available editions and
   deployment targets 11

1.3 Summary 12

2 Beginning a Restlet application 13

2.1 The purpose of Restlet applications 14
2.2 The structure of Restlet applications 15
CONTENTS

2.3 Setting up a Restlet application 17
  Creating an Application subclass 17 • Setting application properties 19 • Exploring the application context 20 • Configuring common services 22

2.4 The Restlet routing system 24
  Preprocessing and postprocessing calls with a Filter 24 • Using a router to dispatch calls based on URIs 27

2.5 Using Restlet resources in an application 30
  Resource, the base of all resources 30 • Using ServerResource as target of calls 31 • Using ClientResource as source of calls 35 • Higher-level resources with Java annotations 38 • Updating the example mail application 42

2.6 Summary 45

3 Deploying a Restlet application 46

3.1 The purpose of Restlet components 47

3.2 The structure of Restlet components 48

3.3 Standalone deployment with Java SE 50
  Creating a Component subclass 50 • Adding server and client connectors 53 • Setting up virtual hosting 57 • Configuring common services 61

3.4 Declarative configuration in XML 62
  XML configuration with Component 62 • XML configuration with Spring Framework 63

3.5 Deployment in an existing Java EE server 67
  The Servlet extension 67 • Servlet engine as a connector for a Restlet component 68 • Servlet engine as a container of Restlet applications 70 • The Oracle XML DB extension 71 • Restlet Framework as a library inside Servlet applications 72 • Dynamic deployment in OSGi environments 73

3.6 Summary 76

PART 2 GETTING READY TO ROLL OUT 79

4 Producing and consuming Restlet representations 81

4.1 Overview of representations 82
  The Variant and RepresentationInfo base classes 82 • The Representation class and its common subclasses 83
CONTENTS

4.2 Producing and consuming XML representations  87
   The org.restlet.ext.xml.XmlRepresentation class  88
   Using the DOM API  89  Using the SAX API  92
   Evaluating XPath expressions  94  Handling XML
   namespaces  95  Validating against XML schemas  97
   Applying XSLT transformations  99  Using the JAXB
   extension  102  Alternative XML binding extensions  104

4.3 Producing and consuming JSON representations  105
   Using the JSON.org extension  106  Using the
   Jackson extension  107

4.4 Applying template representations  108
   Using the FreeMarker extension  109  Using the
   Velocity extension  111

4.5 Content negotiation  113
   Introducing HTTP content negotiation  113  Declaring resource
   variants  115  Configuring client preferences  116
   Combining annotated interfaces and the converter service  117

4.6 Summary  119

5 Securing a Restlet application  121

5.1 Ensuring transport confidentiality and integrity  122
   Understanding TLS and SSL  122  Storing keys and
   certificates  124  Generating a self-signed certificate  125
   Generating a certificate request  125  Importing a trusted
   certificate  126  Enabling HTTPS in Restlet  126
   Providing a custom SSL context  128

5.2 Authenticating users  129
   Providing authentication credentials on the client side  130
   The org.restlet.security.Authenticator class  134  Challenge-based
   authentication  135  Verifying user credentials  136
   Certificate-based authentication  139

5.3 Assigning roles to authenticated users  141
   Request principals  141  The org.restlet.security.Enroler
   interface  142  Organizations, users, and groups  142
   The default enroler and verifier  143

5.4 Authorizing user actions  143
   The org.restlet.security.Authorizer class  143  The role
   authorizer  144  The method authorizer  145  Fine-grained
   authorization  145  Using Java security manager  146
CONTENTS

5.5 Ensuring end-to-end integrity of data 147

Ensuring representation integrity 148 • Representation digesting 148 • Digesting without losing content 149

5.6 Summary 150

6 Documenting and versioning a Restlet application 151

6.1 The purpose of documentation and versioning 152

Use cases 152 • Pitfalls 152 • Recommendations 153

6.2 Introducing WADL 154

6.3 The WadlApplication class 155

6.4 The WadlServerResource class 156

Overview of properties and methods 156 • Improving description of existing server resources 158 • Describing a single resource 162

6.5 Automatic conversion to HTML 163

6.6 Summary 164

7 Enhancing a Restlet application with recipes and best practices 165

7.1 Handling common web elements 166

Managing forms 166 • Managing cookies 169
Serving file directories 172 • Customizing error pages 174
Handling file uploads 176

7.2 Dealing with Atom and RSS feeds 178

Exposing web feeds 178 • Consuming web feeds 180

7.3 Redirecting client calls 180

Manual redirection 181 • The org.restlet.Redirector class 182

7.4 Improving performances 185

Streaming representations 185 • Compressing representations 186 • Partial representations 187
Setting cache information 188 • Conditional methods 190
Removing server-side session state 191

7.5 Modularizing large applications 192

Server dispatcher 192 • RIAP pseudoprotocol 194
Private applications 196
PART 3 FURTHER USE POSSIBILITIES ..............................................201

8 Using Restlet with cloud platforms 203

8.1 Restlet main benefits in the cloud 204

Better SaaS portability 204 • Easy client access to services from the cloud 206

8.2 Deployment in Google App Engine 207

What is GAE? 207 • Deploying Restlet applications in GAE 208

Using Google Accounts authentication 210

8.3 Deployment in Amazon Elastic Beanstalk 211

What is Elastic Beanstalk? 211 • Deploying Restlet applications 212

8.4 Deployment in Windows Azure 214

What is Azure? 214 • Deploying Restlet applications 215

8.5 Accessing web APIs from GAE 221

GAE restrictions and URL fetch 221 • Using Restlet to access RESTful applications 221

8.6 Accessing OData services 221

What is OData? 222 • Generating classes for access using Restlet 226 • Calling OData services 228

8.7 Accessing Amazon S3 resources 230

Configuring a bucket 230 • Accessing a resource with the bucket 230

8.8 Accessing Azure services 233

Configuring storage accounts 233 • Using table service 233

8.9 Accessing intranet resources with Restlet’s SDC extension 235

Secure Data Connector overview 235 • Installing SDC agent 236 • Using the Restlet SDC connector 238

Restlet SDC support in GAE edition 240

8.10 Summary 240
CONTENTS

9 Using Restlet in browsers and mobile devices 242

9.1 Understanding GWT 243
  GWT overview 243 • Installing and using GWT 244
  GWT and REST 246

9.2 The Restlet edition for GWT 247
  The RequestBuilder class of GWT 247 • Restlet port to GWT 248 • Communicating with a REST API 249
  Handling cross-domain requests on the client side 257

9.3 Server-side GWT extension 259
  Working along with GWT-RPC 260 • Handling cross-domain requests on the server side 261

9.4 Understanding Android 262
  Android overview 263 • Installing Android and Eclipse plug-ins 263

9.5 The Restlet edition for Android 267
  Restlet port to Android 267 • Client-side support 268
  Server-side support 271

9.6 Summary 272

10 Embracing hypermedia and the Semantic Web 274

10.1 Hypermedia as the engine of RESTful web APIs 275
  The HATEOAS principle 275 • What are hypermedia and hypertext? 276 • Hypertext support in Restlet 276
  The new hyperdata trend 278

10.2 The Semantic Web with Linked Data 280
  REST and the Semantic Web 280 • Using RDF in representations 281

10.3 Exposing and consuming Linked Data with Restlet 286
  Exposing RDF resources 286 • Consuming linked data with Restlet 291

10.4 Summary 293

11 The future of Restlet 294

11.1 Evolution of HTTP and the rise of SPDY 295
  HTTP history so far 295 • Refactoring with HTTP/1.1 bis 296
  The rise of alternatives 296
CONTENTS

11.2 The Restlet roadmap 299
   Connectors for SPDY, HTTP and SIP 299 ● Enhancements to the
   Restlet API 299 ● Editions for JavaScript and Dart 301
   Restlet Forge 302 ● Restlet Platform 304 ● APISpark, the
   online platform for web APIs 306

11.3 Restlet community 307
   Third-party projects 308 ● Contributing to Restlet 310

11.4 Summary 310

APPENDIXES 313

appendix A Overview of the Restlet Framework 315
appendix B Installing the Restlet Framework 328
appendix C Introducing the REST architecture style 359
appendix D Designing a RESTful web API 371
appendix E Mapping REST, HTTP, and the Restlet API 397
appendix F Getting additional help 413
