JavaScript Cookbook

Shelley Powers
# Table of Contents

## Preface ................................................................. xiii

1. **Working with JavaScript Strings** ........................................ 1
   1.1 Concatenating Two or More Strings ........................................ 3
   1.2 Concatenating a String and Another Data Type .......................... 4
   1.3 Conditionally Comparing Strings ......................................... 5
   1.4 Finding a Substring in a String ......................................... 8
   1.5 Extracting a Substring from a String ................................... 9
   1.6 Checking for an Existing, Nonempty String .............................. 10
   1.7 Breaking a Keyword String into Separate Keywords .................... 13
   1.8 Inserting Special Characters ............................................ 15
   1.9 Processing Individual Lines of a textarea ............................. 16
   1.10 Trimming Whitespace from the Ends of a String ....................... 17
   1.11 Left- or Right-Pad a String .......................................... 19

2. **Using Regular Expressions** .......................................... 21
   2.1 Testing Whether a Substring Exists .................................... 24
   2.2 Testing for Case-Insensitive Substring Matches ......................... 25
   2.3 Validating a Social Security Number ................................... 26
   2.4 Finding and Highlighting All Instances of a Pattern ................. 28
   2.5 Replacing Patterns with New Strings .................................. 31
   2.6 Swap Words in a String Using Capturing Parentheses ................. 32
   2.7 Using Regular Expressions to Trim Whitespace .......................... 35
   2.8 Replace HTML Tags with Named Entities ................................ 36
   2.9 Searching for Special Characters ..................................... 37

3. **Dates, Time, and Timers** ............................................ 39
   3.1 Printing Out Today's Date .............................................. 41
   3.2 Printing Out the UTC Date and Time ................................... 42
   3.3 Printing Out an ISO 8601 Formatted Date ............................... 43

## 9.9 Modifying a Selection List Based on Other Form Decisions

### 10. Debugging and Error Handling

- Gracefully Handling No JavaScript Support
- Checking for Errors in Functions
- Using an Alert for Simple Debugging
- Catching an Error and Providing Graceful Error Handling
- Initiating Manageable Errors
- Using Firebug with Firefox
- Setting a Breakpoint and Examining Data with Firebug
- Firefox and the Console
- Using IE’s Built-in Debugger
- Setting a Breakpoint with IE Developer Tools
- Opera’s Dragonfly
- Setting a Breakpoint with Dragonfly
- Turning on Safari’s Development Tools
- Setting a Breakpoint with Safari’s Debugger
- Debugging in Chrome

### 11. Accessing Page Elements

- Access a Given Element and Find Its Parent and Child Elements
- Accessing All Images in the Web Page
- Discover All Images Within an Article
- Discover all Images in Articles Using the Selectors API
- Finding the Parent Element for a Group of Elements
- Highlighting the First Paragraph in Every Element
- Apply a Striping Theme to an Unordered List
- Creating an Array of All Elements of a Given Class
- Finding All Elements That Share an Attribute
- Finding All Checked Options
- Summing All the Values in a Table Row
- Get Element Attributes
- Get Style Information for an Element

### 12. Creating and Removing Elements and Attributes

- Using innerHTML: A Quick and Easy Approach to Adding Content
- Inserting Elements Before Existing Page Elements
- Appending a New Element to the End of a Page
- Triggering Older Versions of IE to Style New Elements
- Inserting a New Paragraph
- Adding Text to a New Paragraph
- Adding Attributes to an Existing Element
12.8 Testing for a Boolean Attribute 252
12.9 Removing an Attribute 253
12.10 Moving a Paragraph 254
12.11 Replacing Links with Footnote Bullets 254
12.12 Adding Rows to an Existing Table 257
12.13 Removing a Paragraph from a div Element 260
12.14 Deleting Rows from an HTML Table 262
12.15 Changing the Element's CSS Style Properties 264

13. Working with Web Page Spaces ........................................... 269
13.1 Determining the Area of the Web Page 270
13.2 Measuring Elements 272
13.3 Locating Elements in the Page 273
13.4 Hiding Page Sections 276
13.5 Creating Collapsible Form Sections 277
13.6 Adding a Page Overlay 281
13.7 Creating Tab Pages 284
13.8 Creating Hover-Based Pop-up Info Windows 289
13.9 Collapsing or Resizing the Sidebar 292

14. Creating Interactive and Accessible Effects with JavaScript, CSS, and ARIA ...... 297
14.1 Displaying a Hidden Page Section 299
14.2 Creating an Alert Message 300
14.3 Highlighting Form Field with Missing or Incorrect Data 302
14.4 Adding Keyboard Accessibility to a Page Overlay 308
14.5 Creating Collapsible Form Sections 312
14.6 Displaying a Flash of Color to Signal an Action 316
14.7 Adding ARIA Attributes to a Tabbed Page Application 320
14.8 Live Region 323

15. Creating Media Rich and Interactive Applications ............................. 325
15.1 Creating Basic Shapes in Canvas (Using the canvas Element) 326
15.2 Implementing Canvas Applications in IE 328
15.3 Creating a Dynamic Line Chart in Canvas 330
15.4 Adding JavaScript to an SVG File 333
15.5 Accessing SVG from Web Page Script 335
15.6 Emulating SVG in Internet Explorer 338
15.7 Enable Interactive SVG Embedded in HTML 339
15.8 Using the Math Functions to Create a Realistic, Ticking Analog Clock in SVG 345
15.9 Integrating SVG and the Canvas Element in HTML 347
15.10 Turning on WebGL Support in Firefox and WebKit/Safari 350
15.11 Running a Routine When an Audio File Begins Playing 351
15.12 Controlling Video from JavaScript with the video Element 353

16. **JavaScript Objects** ................................................................. 359
   16.1 Defining a Basic JavaScript Object 360
   16.2 Keeping Object Members Private 361
   16.3 Expanding Objects with prototype 362
   16.4 Adding Getter/Setter to Objects 364
   16.5 Inheriting an Object’s Functionality 366
   16.6 Extending an Object by Defining a New Property 369
   16.7 Enumerating an Object’s Properties 374
   16.8 Preventing Object Extensibility 377
   16.9 Preventing Object Additions and Changes to Property Descriptors 379
   16.10 Preventing Any Changes to an Object 380
   16.11 One-Off Objects and Namespacing Your JavaScript 381
   16.12 Rediscovering “this” with Prototype.bind 383
   16.13 Chaining Your Object’s Methods 385

17. **JavaScript Libraries** ............................................................... 389
   17.1 Packaging Your Code 390
   17.2 Testing Your Code with JsUnit 392
   17.3 Minify Your Library 397
   17.4 Hosting Your Library 397
   17.5 Using an External Library: Building on the jQuery Framework 400
   17.6 Using Existing jQuery Plug-ins 402
   17.7 Convert Your Library to a jQuery Plug-in 404
   17.8 Safely Combining Several Libraries in Your Applications 408

18. **Communication** ................................................................. 413
   18.1 Accessing the XMLHttpRequest Object 414
   18.2 Preparing the Data for Transmission 416
   18.3 Determining the Type of Query Call 417
   18.4 Adding a Callback Function to an Ajax Request 420
   18.5 Checking for an Error Condition 421
   18.6 Processing a Text Result 422
   18.7 Making an Ajax Request to Another Domain (Using JSONP) 422
   18.8 Populating a Selection List from the Server 424
   18.9 Using a Timer to Automatically Update the Page with Fresh Data 427
   18.10 Communicating Across Windows with PostMessage 430

19. **Working with Structured Data** ............................................... 435
   19.1 Process an XML Document Returned from an Ajax Call 436
   19.2 Extracting Pertinent Information from an XML Tree 437
   19.3 Generate a JavaScript Object with JSON, Old-School Style 442
19.4 Parse a JSON Formatted String ........................................... 444
19.5 Convert an Object to a Filtered/Transformed String with JSON .... 445
19.6 Convert hCalendar Microformat Annotations into a Canvas Timeline ...................................................................................... 447
19.7 Glean Page RDFa and Convert It into JSON Using rdfQuery and the jQuery RDF Plug-in ................................. 450

20. Persistence ................................................................................. 457
20.1 Attaching Persistent Information to URLs ................................. 458
20.2 Creating a Cookie to Persist Information Across Pages ............... 462
20.3 Persisting Information Using the History.pushState Method and window.onpopstate ......................................................... 465
20.4 Using sessionStorage for Client-Side Storage ......................... 469
20.5 Creating a localStorage Client-Side Data Storage Item ............ 476
20.6 Persisting Data Using a Relational Data Store ......................... 479

21. JavaScript Outside the Box ......................................................... 483
21.1 Creating a Browser Add-On, Plug-in, or Extension ...................... 484
21.2 Creating Desktop and Mobile Widgets ...................................... 489
21.3 Creating JavaScript Applications for the iPhone, Android, and BlackBerry with PhoneGap ...................................................... 494
21.4 Enhancing Tools with JavaScript .............................................. 496
21.5 Creating Efficient Desktop Applications with Web Workers and the File API ............................................................... 500

Index .................................................................................................. 511
