CONTENTS

Preface v

Acknowledgment vii

Gravity Induced Dispersion For Nearly Flat Vortex Sheets 1
Daniel Spirn and J. Douglas Wright

An Experimental Study of Low-Frequency Waves Generated by Random Gravity Waves in Shoaling Water 7
X. Liu, Y. Yang and P. Huang

Statistical Theories and Direct Numerical Simulations 29
Nathaniel Whitaker

Wave Modulated Turbulent Fields at the Ocean Surface and Related Air-Sea Fluxes 49
F. Veron and W. K. Melville and L. Lenain

Approximate Periodic Solutions for the Rapidly Rotating Shallow-Water and Related Equations 69
Bin Cheng and Eitan Tadmor

Practical Wind Wave Modeling 79
H. L. Tolman

Nonexistence Of Continuous Solutions for a Semilinear Wave Equations with Smooth Data 93
Alfonso Castro
Exact Theory Of Existence and Stability for Two- and Three-Dimensional Solitary Waves

Shu-Ming Sun

101

Tsunami Propagation, Directivity, and Pulse Persistence from a Finite Source

George F. Carrier and Harry Yeh

120

Computing the Lagrangian Coherent Structures of a Kinematic Meandering Jet

Amal A. El Moghraby

140

Mathematical Methods for Coupled Nonlinear PDE’s

Sean Brooks and M. F. Mahmood

159

Oblique Interaction of Solitary Waves

Min Chen

169

A Simple Proof of a Priori Estimates for Water Waves

Daniel Coutand and Steve Shkoller

181

Demonstration Experiments in the NSF-CBMS Regional Conference on Water Waves

D. Henderson, R. Geist, K. Hammack and H. Segur

191
