COMPUTATIONAL MECHANICS

Proceedings of
the Sixth World Congress on Computational Mechanics
in conjunction with
the Second Asian-Pacific Congress
on Computational Mechanics

September 5-10, 2004, Beijing, China

Editors
Z. H. Yao
M. W. Yuan
W. X. Zhong

Tsinghua University Press
Beijing
CONTENTS

Preface i
Organizers and Committees ii
Sponsors vi

* denotes the presenter in alphabet order of the first-author’s name

Plenary Lectures
1 Multiscale analysis with atomistic/continuum models for fracture 1
   T. Belytschko*, S. P. Xiao
2 Intelligent adaptive fluid structure interaction systems 10
   R. Ohayon*
3 Duality system in optimal control and applied mechanics 17
   Wanxie Zhong*, Zhigang Wu, Qiang Gao

Semi-plenary Lectures
4 The high performance element library for solid mechanics 37
   C. K. Choi*, In-Seon Han
5 Nano-to-macro biomechanics of bones: recent developments and current research Endeavors 48
   Christian Hellmich*, Franz-Josef Ulm, Luc Dormieux, Jean-François Barthélémy, Sherin Torabia, Cornelia Kober
6 Mesh or meshless methods? Is this the right question? 60
   Sergio R. Idelsohn*, Eugenio Oñate
7 Large scale finite element simulation and modeling for environmental flows using GIS/CAD 72
   Kazuo Kashiwama*, Hidetaka Hamada, Takeshi Okada, Takeo Taniguchi
8 Kirchhoff’s analogy between rods and gyrostats for chaos determination 83
   A. Y. T. Leung*, J. L. Kuang
9 Inverse analysis problems in structural engineering of concrete dams 97
   Giulio Maier*, Raffaele Ardito, Roberto Fedele
10 New developments in computational material failure mechanics 108
   J. Oliver*, A. E. Huespe, M. D. G. Pulido, S. Blanco, D. Linero
11 Development of statistical design support system and its applications to some industrial problems 120
   Masaki Shiratori*, Qiang Yu
12 Advanced computational techniques for moving boundaries and interfaces 132
   Tayfun E. Tezduyar*
13 Grand challenge of CIP towards universal solver from nano-scale to astrophysical scale 142
   Takashi Yabe*
14 Challenges of high Dam Construction to computational mechanics 154
   Chuhan Zhang*
   List of other semi-plenary lectures 167

Keynote Lectures
15 Geomechanics in the oil industry — what have we learned and where do we go? 168
   Bernt S. Aadnoy*
16 Implicit kinetic schemes for the ideal MHD equations

Ramesh K. Agarwal*, Heru S. R. Reksoprodjo, Wei Dong

17 Recent progress on the application of BEM to thin-walled structures

M. H. Aliabadi*

18 Application of a priori information to optical computed tomography

K. Amaya*, S. Majima, S. Aoki

19 Fluid-structure interaction of a falling leaf solved by IDO scheme using intergrid and overset grid

T. Aoki*

20 On the modeling of localized failures in saturated porous media through strong discontinuities

F. Armero*, C. Callari

21 Fracture of unreinforced masonry walls under shear

M. M. Attard*, K. Chaimoon, A. Nappi

22 Particle finite element method with thermal coupling

R. Aubry*, S. R. Idelsohn, E. Oñate

22 Computational mechanics for predicting reliability of flip-chip components

Chris Bailey*, Stoyan Stoyanov, Hua Lu

24 Recent advances and applications: plastic anisotropy of aluminium alloys

Dorel Banabic*

25 Crack initiation and propagation in a dynamically loaded prenotched plate

R. C. Batra*, M. H. Lear

26 Mechanical characterization of anisotropic materials by indentation test, imprint mapping and inverse analysis

M. Bocciarelli*, G. Bolzon, G. Maier

27 Numerical simulation of train-track-bridge dynamic interaction

S. Bruni*, A. Collina, R. Corradi, G. Diana

28 A Reynolds uniform numerical method for Prandtl's boundary layer problem for flow past a three-dimensional yawed wedge

J. S. Butler*, J. J. H. Miller, G. I. Shishkin

29 Science-based materials modeling at Sandia/California: an overview

E. P. Chen*

30 An extended meshfree method for elastic and inelastic media

J. S. Chen*, Dongdong Wang

31 Maintenance of steel making plant using a knowledge-based information system

Jae-Boong Choi*, Jong-Choon Kim, Young-Jin Kim, I-Hun Kil, Byung-In Lee, Shinobu Yoshimura

32 Nano mechanics and multi-scale simulations

Ken P. Chong* 265

33 Strategic priorities for research in the built environment

Mark J. Clayton* 271

34 Finite element approximation of the three field formulation of the elasticity problem using stabilization

Ramon Codina*

35 Biomechanical behaviour of a new SMA spinal implant through a computational approach

R. Contro*, P. Vena, D. Gastaldi, G. Franzoso

36 Scaled boundary methods: advantages for elastostatics

Andrew J. Deeks* 288

37 Characteristics of blasting vibration in presence of weak interlayers

Hua Ding*, Xiaojiang Shang, Jinze Bai

38 Finite volume method on simulating 1D shallow-water flow over uneven bottom

Liyun Dong*, W. Z. Lu, A. Y. T. Leung

— viii —
39 Random response of smart isolated structures implemented with semi-active controller

Yongfeng Du*, Hui Li

316

40 Global error estimation with displacement and equilibrium meshless method

Marc Duflot, Hung Nguyen-Dang*

322

41 Large scale mapping of public utilities within Texas rights-of-way: an application of GPS, GIS and the internet

Christopher D. Ellis*, Cesar Quiroga

328

42 Numerical simulation of propagation of 3D cracks in infinite bodies loaded in tension or shear

Elie Favier, Véronique Lazarus, Jean-Baptiste Leblond*

334

43 Numerical simulation of coalescence of numerous microcracks

Xiqiao Feng*, Lin Ma

340

44 Enhanced front tracking method for the computation of discontinuous structures in fluid dynamics

James Glimm, Xiaolin Li*, Yuanhua Li, Zhiliang Xu

345

45 Sensitivity analysis and design optimization of heat transfer with phase-change

Yuanxian Gu*, Yetao Zhou, Biaosong Chen

351

46 MPM/MD handshaking method for multiscale simulation and its application to high energy cluster impacts

Z. Guo, W. Yang*

357

47 A research on passive control of bridge buffeting control of bridges based on multimode coupled buffeting theory

D. J. Han*, X. W. Zeng

363

48 Computational inverse techniques: theory, numerical analysis and application

X. Han*, G. R. Liu, G. Y. Li

369

49 Ultra direct numerical simulation of turbulence on the earth simulator

Takashi Ishihara*

375

50 A process view on manufacture process development

N. Järvsträt*

380

51 Modeling of wave-seabed-structure interaction: a review

Dong-Sheng Jeng*

385

52 Meshfree methods for multiphysics simulations of natural and artificial crystals: electronic, photonic, and acoustic band-structure calculations

Sukky Jun*, Young-Sam Cho, Sung Youb Kim

391

53 Semi-analytical modeling of the process interaction zone

Alexander F. H. Kaplan*

397

54 Large-scale structures captured in DNS of turbulent channel flows

H. Kawamura*, T. Tsukahara, H. Abe, Y. Matsuo

403

55 Recent developments in reliability-based design optimization

G. Kharmanda*, N. Olhoff, A. El-Hami

408

56 Topology optimization by element connectivity parameterization: why and what?

Yoon Young Kim*

414

57 Unstable deformation mode of atomic structure

T. Kitamura*, Y. Umeno, N. Tsuji

420

58 Implementation framework toward an integrated steel bridge information management

Sang-Ho Lee*

426

59 Pseudo excitation method of linear/nonlinear random vibration

Jiahao Lin*, Yahui Zhang, Yan Zhao, Guangwu Tang

432

60 Meshless techniques for convection-diffusion problems

G. R. Liu*, Y. T. Gu

438

61 The first exact variational formulation of 3-D Navier-Stokes equations

Gaolian Liu*

444

62 Orientation element based constitutive model and lattice model

Xiaoyu Liu, Shouchun Deng, Naigang Liang*

63 Quantitative calculation on structural vulnerability

Xila Liu*
85 Numerical and experimental simulation of the invert forming of thin-walled tubes using a die
Pedro A. Rosa, C. S. Li*, Jorge M. C. Rodrigues, Paulo A. F. Martins

86 Edge and corner singularities in application for isotropic materials and layered composites
E. Schnack*, A. Dimitrov

87 Verification and validation in computational solid mechanics and the ASME standards committee,
Leonard E. Schwer*

88 The effect of vertical stiffeners on postyielding behavior of castellated beams
Hossein Showkati*, Reza Mohammadsade

89 Determination of length scale effects in nonlocal media
A. Simone, C. Lacono, L. J. Sluys*

90 Heat conduction analysis in nonhomogeneous anisotropic solids
J. Sladek*, V. Sladek, Ch. Zhang

91 Weighted block-orthogonal base functions for static analysis of unbounded domains
Chongmin Song*

92 Computation of parachute maneuvers
Keith R. Stein*, Tayfun E. Tezduyar, Sunil V. Sathe, Masayoshi Senga, Richard J. Benney, Richard D. Charles

93 Adaptive mixed finite element methods for nonlinear elasticity: a two-fold saddle point approach
E. P. Stephan*, M. Maischak

94 Stochastic singular-points-outside-domain method and its application in engineering
C. Su*, X. M. Fan, D. J. Han

95 Optimal control simulation of electric-mechanical coupled trusses
Y. K. Sui*, L. C. Long

96 Finite element computation of earth's mantle convection problem on a vector-parallel computer
Atsushi Suzuki*

97 Application of Trefftz fields in post-solution procedures
Barna Szabó*, Edgár F. Bertóti

98 A robust inverse analysis for retrieval of boundary values in thermoelasticity problems
Masa. Tanaka, A. Guzik*, T. Matsumoto

99 Study on thermal properties of CNT-based composites by the hybrid boundary node method combined with a simplified approach
Masata Tanaka*, J. M. Zhang

100 Parameters identification of an elastic plate subjected to dynamic loading using measured data of strains
Masata Tanaka*, Toshiro Matsumoto, Yan Bin Wang

101 Trefftz spectral analysis of biphasic media
João A. Teixeira de Freitas*, Ionut D. Moldovan, Milan Toma

102 On the parametric refinement of moving kriging interpolation for element-free Galerkin method
Patthanapong Tongsuk*, Worsak Kanok-Nukulchai

103 An implicit discontinuous Galerkin finite element method for water waves
J. J. W. van der Vegt*, S. K. Tomar

104 Multi-scale computational modeling of localization problems
George Z. Voyiadjis*, Rashid K. Abu Al-Rub

105 2D and 3D Dynamic Green's functions and time-domain BIE formulations for piezoelectric solids
C.-Y. Wang*, Ch. Zhang

106 Large scale simulation of 3D particle-reinforced composites using fast multipole boundary element method
Haitao Wang*, Zhenhan Yao
A local weighted meshless method based on compactly supported radial basis functions and its application in ocean engineering

J. G. Wang*

Effect of data structure for time series prediction using time delay neural network

Xiekang Wang*, Weizhen Lu, Shuyou Cao

Nanomechanics and nanofluidics of carbon nanotubes and polymer composites

Chenyu Wei*, Deepak Srivastava

Recent transcendental eigensolution advances in structural engineering and other disciplines

M. S. Djoudi, W. P. Howson, D. Kennedy, A. Watson, S. Yuan, W. X. Zhong

Integrated management system for road sign

Je-Yoon Woo*, Jee-Hee Koo, Kyu-Soo Chong, Joon-Yeop Na, Sang-Cheol Lee

Finite element dual analysis for piezoelectric crack

Changchun Wu*, Jinghua Liu, Genki Yagawa

An analysis of magnesium tube forming and wall thinning compensation at elevated temperatures

Xin Wu*, Ramanth Krishnamurthy, Wuhua Yang, Michael L. Wenner

Multiscale modeling of polymer composite properties

Yuri G. Yanovsky*

Numerical simulation of pulsed laser transformation hardening

Gang Yu*, Wei Wu, Naigang Liang

The hybrid boundary node method accelerated by the fast multipole expansion

J. M. Zhang*, Masa. Tanaka

Viscoelastic rolling for tire standing wave simulation

Dong Zheng*

Mesh generation and visual steering in engineering and scientific computation

Yao Zheng*

Slice analysis of cyclic autocorrelation function for rolling element bearing fault diagnosis

F. C. Zhou, J. Chen*, J. He, G. Bi, G. C. Zhang, F. C. Li

Topology optimization for shell structures with linear buckling responses

M. Zhou*

Problems of coupled fields in rock mass

Jiashou Zhuo*

Exploring Mineral Biopolymer Interactions to Model Mechanical Response of Interfaces in Bio-Nanocomposite, Nacre

Dinesh R. Katti*, Kalpana S. Katti, Pijush Ghosh, Steven Schmidt
