Progress in Wall Turbulence: Understanding and Modeling

Proceedings of the WALLTURB International Workshop held in Lille, France, April 21–23, 2009

Edited by

Michel Stanislas
*Université Lille Nord de France, LML, UMR CNRS 8107, France*

Javier Jimenez
*Universidad Politécnica de Madrid, Spain*

and

Ivan Marusic
*The University of Melbourne, Australia*

Foreword by Rémy Denos
*European Commission DGXII*

Springer
Contents

The WALLTURB Project ........................................... 1
Michel Stanislas, Javier Jimenez, and Ivan Marusic

Invited Speakers

The Law of the Wall. Indications from DNS, and Opinion ............. 9
Philippe R. Spalart

A Web-Services Accessible Turbulence Database and Application to A-Priori Testing of a Matrix Exponential Subgrid Model .... 21
Charles Meneveau

Modeling Multi-point Correlations in Wall-Bounded Turbulence .... 29
Robert D. Moser, Amitabh Bhattacharya, and Nicholas Malaya

Theoretical Prediction of Turbulent Skin Friction on Geometrically Complex Surfaces ............................................. 39
Pierre Sagaut and Yulia Peet

Scaling Turbulent Fluctuations in Wall Layers ........................ 51
Ronald L. Panton

Session 1: The WALLTURB LML Experiment

The WALLTURB Joined Experiment to Assess the Large Scale Structures in a High Reynolds Number Turbulent Boundary Layer . 65
Joel Delville, Patrick Braud, Sebastien Coudert, Jean-Marc Foucaut, Carine Fourment, W.K. George, Peter B.V. Johansson, Jim Kostas, Fahrid Mehdi, A. Royer, Michel Stanislas, and Murat Tutkun
Calibration of the WALLTURB Experiment Hot Wire Rake with Help of PIV ................................................................. 75
Michel Stanislas, Jean-Marc Foucaut, Sebastien Coudert, Murat Tutkun, William K. George, and Joel Delville

Spatial Correlation from the SPIV Database of the WALLTURB Experiment ......................................................... 85
Jean-Marc Foucaut, Sebastien Coudert, Michel Stanislas, Joel Delville, Murat Tutkun, and William K. George

Two-Point Correlations and POD Analysis of the WALLTURB Experiment Using the Hot-Wire Rake Database .......... 95
Murat Tutkun, William K. George, Michel Stanislas, Joel Delville, Jean-Marc Foucaut, and Sebastien Coudert

Session 2: Experiments in Flat Plate Boundary Layers

Reynolds Number Dependence of the Amplitude Modulated Near-Wall Cycle .......................................................... 105
Ivan Marusic, Romain Mathis, and Nicholas Hutchins

Tomographic Particle Image Velocimetry Measurements of a High Reynolds Number Turbulent Boundary Layer .... 113
Callum Atkinson, Sebastien Coudert, Jean-Marc Foucaut, Michel Stanislas, and Julio Soria

Study of Vortical Structures in Turbulent Near-Wall Flows ................................................................. 121
Sophie Herpin, Sebastien Coudert, Jean-Marc Foucaut, Julio Soria, and Michel Stanislas

Session 3: Experiments in Adverse Pressure Gradient Boundary Layers

Two-Point Near-Wall Measurements of Velocity and Wall Shear Stress Beneath a Separating Turbulent Boundary Layer 135
Paul Nathan and Philip E. Hancock

Experimental Analysis of Turbulent Boundary Layer with Adverse Pressure Gradient Corresponding to Turbomachinery Conditions 143
Stanislaw Drobniak, Witold Elsner, Artur Drozdz, and Magdalena Materny

Near Wall Measurements in a Separating Turbulent Boundary Layer with and without Passive Flow Control .......... 151
Davide Lengani, Daniele Simoni, Marina Ubaldi, Pietro Zunino, and Francesco Bertini
Session 4: Boundary Layer Structure and Scaling

On the Relationship Between Vortex Tubes and Sheets in Wall-Bounded Flows
Sergio Pirozzoli

Spanwise Characteristics of Hairpin Packets in a Turbulent Boundary Layer Under a Strong Adverse Pressure Gradient
S. Rahgozar and Y. Maciel

The Mesolayer and Reynolds Number Dependencies of Boundary Layer Turbulence
William K. George and Murat Tutkun

A New Wall Function for Near Wall Mixing Length Models Based on a Universal Representation of Near Wall Turbulence
Michel Stanislas

Session 5: DNS and LES

Direct Numerical Simulations of Converging-Diverging Channel Flow
Jean-Philippe Laval and Matthieu Marquillie

Corrections to Taylor's Approximation from Computed Turbulent Convection Velocities
Javier Jiménez and Juan C. del Álamo

A Multi-scale & Dynamic Method for Spatially Evolving Flows
Guillermo Araya, Luciano Castillo, Charles Meneveau, and Kenneth Jansen

Statistics and Flow Structures in Couette–Poiseuille Flows
Matteo Bernardini, Paolo Orlandi, Sergio Pirozzoli, and Fabrizio Fabiani

Session 6: Theory

LES-Langevin Approach for Turbulent Channel Flow
Rostislav Dolganov, Bérengère Dubrulle, and Jean-Philippe Laval

A Scale-Entropy Diffusion Equation for Wall Turbulence
Hassan Kassem and Diogo Queiros-Conde

A Specific Behaviour of Adverse Pressure Gradient Near Wall Flows
Syed-Imran Shah, Jean-Philippe Laval, and Michel Stanislas
Session 7: RANS Modelling

A Nonlinear Eddy-Viscosity Model for Near-Wall Turbulence............. 269
B. Anders Pettersson Reif and Mikael Mortensen

ASBM-BSL: An Easy Access to the Structure Based Model Technology .... 277
Bertrand Aupoix, Stavros C. Kassinos, and Carlos A. Langer

Introduction of Wall Effects into Explicit Algebraic Stress Models
Through Elliptic Blending.................................................. 287
Abdou G. Oceni, Rémi Manceau, and Thomas B. Gatski

Session 8: Dynamical Systems

POD Based Reduced-Order Model for Prescribing Turbulent Near Wall
Unsteady Boundary Condition.............................................. 301
Guillaume Lehnasch, Julien Jouanguy, Jean-Philippe Laval, and
Joel Delville

A POD-Based Model for the Turbulent Wall Layer.......................... 309
Bérangère Podvin

HR SPlV for Dynamical System Construction.................................. 317
Jean-Marc Foucaut, Sébastien Coudert, and Michel Stanislas

The Stagnation Point Structure of Wall-Turbulence and the Law
of the Wall in Turbulent Channel Flow.................................... 327
Vassilios Dallas and J. Christos Vassilicos

Session 9: Large Eddy Simulation

Wall Modelling for Implicit Large Eddy Simulation of Favourable
and Adverse Pressure Gradient Flows..................................... 337
Zhen Li Chen, Antoine Devesa, Michael Meyer, Eric Lauer,
Stefan Hickel, Christian Stemmer, and Nikolaus A. Adams

LES of Turbulent Channel Flow with Pressure Gradient Corresponding
to Turbomachinery Conditions............................................. 347
Witold Elsner, Lukasz Kuban, and Artur Tyliszczak

LES Modeling of Converging Diverging Turbulent Channel Flow......... 355
Jean-Philippe Laval, Witold Elsner, Lukasz Kuban, and
Matthieu Marquillie

Large-Scale Organized Motion in Turbulent Pipe Flow..................... 365
Sebastian Große, Dirk Jan Kuik, and Jerry Westerweel
Session 10: Skin Friction

Near-Wall Measurements and Wall Shear Stress .......................... 377
T. Gunnar Johansson

Measurements of Near Wall Velocity and Wall Stress in a Wall-Bounded
Turbulent Flow Using Digital Holographic Microscopic PIV
and Shear Stress Sensitive Film ............................................. 385
Omid Amili and Julio Soria

Friction Measurement in Zero and Adverse Pressure Gradient
Boundary Layer Using Oil Droplet Interferometric Method ............. 393
Philippe Barricau, Guy Pailhas, Yann Touvet, and Laurent Perret

Session 11: Modified Wall Flow

Scaling of Turbulence Structures in Very-Rough-Wall Channel Flow ... 405
David M. Birch and Jonathan F. Morrison

Characterizing a Boundary Layer Flow for Bubble Drag Reduction ... 413
Marc Harleman, René Delfos, Jerry Westerweel, and
Thomas J.C. van Terwisga

Direct and Large Eddy Numerical Simulations of Turbulent Viscoelastic
Drag Reduction ................................................................. 421
Laurent Thais, Andres E. Tejada-Martínez, Thomas B. Gatski,
Gilmar Mompean, and Hassan Naji

DNS of Supercritical Carbon Dioxide Turbulent Channel Flow ......... 429
Mamoru Tanahashi, Yasuhiro Tominaga, Masayasu Shimura,
Katsumi Hashimoto, and Toshio Miyauchi

Session 12: Industrial Modeling

Evaluation of $v^2-f$ and ASBM Turbulence Models for Transonic
Aerofoil RAE2822 .......................................................... 439
Jeremy J. Benton

Turbulence Modelling Applied to Aerodynamic Design ................. 451
Vincent Levasseur, Sylvain Joly, and Jean-Claude Courty
