**PREFACE** xxi

**LIST OF SYMBOLS** xxiii

**Introduction to Polymer Materials** 1

I.1. Chronological Landmarks for Polymers, 1
I.2. The Polymer Chain, 2
I.3. The Key Points of Polymer Synthesis, 2
   I.3.1. Step Polymerization, 3
   I.3.2. Chain Polymerization, 3
   I.3.3. Controlled Polymerizations, 4
   I.3.4. Ziegler-Natta and Metallocene Polymerizations, 5
   I.3.5. Synthesis of Copolymers, 5
   I.3.6. Polymer Cross-Linking, 7
   I.3.7. The Molecular Weight Distribution, 8
   I.3.8. Conclusion, 8
I.4. Major Polymers, 8
I.5. The Lightness of Polymer Materials, 8
I.6. Main Mechanical Aspects of Polymer Materials, 11
I.7. Comprehensive Survey of the Polymer Mechanical Behaviors, 11
   Further Reading, 12

**PART I** 13

1 The Four Classes of Polymer Materials 15

1.1. The Young Modulus, 15
1.2. Un-Cross-Linked Amorphous Polymers, 15
1.3. Semicrystalline Thermoplastics, 17
1.4. Thermosetting Polymers, 17
1.5. Cross-Linked Elastomers, 18
1.6. Conclusions, 19
2 The Macromolecular Chain in the Amorphous Bulk Polymer: Static and Dynamic Properties

2.1. Conformational Statistics of Isolated Polymer Chains, 21
   2.1.1. Freely Jointed Chain, 21
   2.1.2. Freely Rotating Chain, 22
   2.1.3. Chain with Symmetrically Restricted Internal Rotation, 22
   2.1.4. Equivalent Kuhn Chain, 23

2.2. Conformational Energy Calculations, 24
   2.2.1. Conformational Energy of Model Molecules, 24
   2.2.2. Conformational Energy Maps, 25
   2.2.3. NMR Investigation of Polymer Conformations, 27

2.3. Global Properties of an Isolated Chain, 27
   2.3.1. Rotational Isomers, Statistical Weights, and Calculation of \( \langle R^2 \rangle \), 28
   2.3.2. Construction of an Isolated Chain According to the Monte-Carlo Method, 28

2.4. Chain Conformations in Bulk Amorphous Polymers, 28
   2.4.1. Experimental Investigation by Neutron Scattering, 28
   2.4.2. Computer Modeling of an Amorphous Cell, 28

2.5. Local Dynamics of Isolated Chains, 30
   2.5.1. Conformational Jumps in Linear Alkanes and Aliphatic Chains, 30
   2.5.2. Molecular Dynamics of Isolated Chains, 32
   2.5.3. Cooperative Kinematics Technique, 33

2.6. Local Dynamics of a Polymer Chain in Solution, 34
   2.6.1. Experimental Investigation by \(^{13}\)C NMR, 35
   2.6.2. Molecular Modeling of Local Chain Dynamics in Solution, 35

2.7. Local Dynamics in Bulk Polymers, 37
   2.7.1. Investigation by \(^{13}\)C NMR, 37
   2.7.2. Molecular Modeling of Local Chain Dynamics in Polymer Melts, 37

2.8. Conclusions, 39

References, 39
Further Reading, 40

3 The Glass Transition

3.1. Experimental Studies, 41
   3.1.1. Temperature Dependence of the Specific Volume, 41
   3.1.2. Differential Scanning Calorimetry Investigation, 41
   3.1.3. Mechanical Observation of the Glass Transition, 42
      3.1.3.1. The Young Modulus, 42
      3.1.3.2. Dynamic Mechanical Analysis, 42

3.2. Molecular Origin of the Glass Transition Temperature, 43
   3.2.1. Cooperative Motions of the Main-Chain Bonds, 44
   3.2.2. Time (or Frequency)–Temperature Equivalence, 44

3.3. Overview of the Glass Transition Temperature Theories, 45
   3.3.1. The Gibbs–Di Marzio Thermodynamic Theory, 46
   3.3.2. Dynamic Free Volume, 47
   3.3.3. Computer Simulations, 50
   3.3.4. Physical Aging, 51

3.4. Effect of the Polymer Architecture on the Glass Transition Temperature, 52
4 Secondary Relaxations in Amorphous Polymers

4.1 Experimental Evidences of a Secondary Relaxation, 59
   4.1.1. Dynamic Mechanical Analysis, 59
      4.1.1.1. A Simple Example: The $\gamma$ Relaxation of Poly(cyclohexyl methacrylate), 59
      4.1.1.2. A More Complex Example: The $\beta$ Relaxation of Poly(ethylene terephthalate), 61
   4.1.2. Dielectric Analysis, 61
   4.1.3. Relaxation Map, 61

4.2. Identification of the Motions that Are Responsible for the Secondary Relaxations, 61
   4.2.1. High-Resolution Solid-State $^{13}$C NMR, 62
      4.2.1.1. Some General Principles, 62
      4.2.1.2. Example of the $\gamma$ Relaxation of Poly(cyclohexyl methacrylate), 63
      4.2.1.3. Example of the $\beta$ Relaxation of Poly(ethylene terephthalate), 64
   4.2.2. $^2$H NMR of Selectively Deuterated Compounds, 66
   4.2.3. Comparison of Results Obtained from the Different Techniques, 66
   4.2.4. Use of Antiplasticizers, 67

4.3. Motional Cooperativity Associated with Secondary Relaxations, 67
   4.3.1. Starkweather Approach, 68
   4.3.2. Nature of the Motional Cooperativity, 69
      4.3.2.1. Intermolecular Cooperativity, 69
      4.3.2.2. Intramolecular Cooperativity, 69

4.4. Secondary Relaxations of Poly(methyl methacrylate) and Some of Its Random Copolymers, 69
   4.4.1. PMMA, 69
      4.4.1.1. Low-Temperature Secondary Relaxations of PMMA, 69
      4.4.1.2. DMA and Dielectric Relaxation Evidences of the $\beta$ Relaxation of PMMA, 69
      4.4.1.3. Identification of Local Motions Responsible for the $\beta$ Relaxation of PMMA, 70
      4.4.1.4. Information Derived from Molecular Modeling, 71
   4.4.2. Methyl Methacrylate-co-N-cyclohexylmaleimide Random Copolymers, 72
   4.4.3. Methyl Methacrylate-co-N-methylglutarimide Random Copolymers, 73
4.5. Secondary Relaxation of Neat and Antiplasticized Bisphenol-A Polycarbonate, 75
4.5.1. Characterization by Dynamic Mechanical Analysis and Dielectric Relaxation, 75
4.5.2. Identification of Motions, 75
4.5.3. Nature of the Motional Cooperativity, 76
4.5.3.1. Influence of Hydrostatic Pressure, 76
4.5.3.2. Effect of Small-Molecule Antiplasticizers, 76
4.5.3.3. Molecular Modeling, 77
4.6. Secondary Relaxations in Neat and Antiplasticized Aryl-Aliphatic Epoxy Resins, 78
4.6.1. Characterization of the $\beta$ Relaxation and Motional Cooperativity, 80
4.6.2. Identification of Local Motions Involved in the $\beta$ Relaxation, 81
4.6.3. Characterization of the $\beta$ Secondary Relaxation of Antiplasticized Epoxy Networks, 82
4.6.4. Local Motions in Antiplasticized Epoxy Networks, 82
4.6.5. Intermolecular Cooperativity of the $\beta$ Relaxation Motions in Neat and Antiplasticized Epoxy Networks, 83
4.7. Conclusions, 83
References, 84
Further Reading, 84

5 Entanglements in Bulk Un-Cross-Linked Polymers
5.1. Concept of Entanglement, 85
5.2. Experimental Determinations of $M_c$, 87
5.2.1. From the Rubbery Plateau, 87
5.2.1.1. Young Modulus, 87
5.2.1.2. Dynamic Shear Modulus, 87
5.2.2. From the Viscosity in the Flow Region, 88
5.2.2.1. Characterization of the Newtonian Viscosity, 88
5.2.2.2. Physical Meaning of Viscosity, 89
5.2.2.3. Molecular Weight Dependence of the Newtonian Viscosity, 89
5.3. Theoretical Overview of Chain Dynamics, 90
5.3.1. The Rouse Model, 90
5.3.2. de Gennes Reptation Model, 92
5.3.3. The Doi-Edwards Model, 94
5.4. Relationships Between Entanglements and Polymer Chemical Structure, 95
5.4.1. Values of the Molecular Weight Between Entanglements, 95
5.4.2. Entanglement Density, 95
5.4.3. Number of Bonds Between Entanglements, 96
5.4.4. Number of Equivalent Bonds Between Entanglements, 96
5.4.5. The Example of Random Copolymers, 96
5.5. Conclusions, 98
References, 99
Further Reading, 99

6 Semicrystalline Polymers
6.1. Experimental Evidence of Semicrystalline State, 101
6.1.1. Wide-Angle X-Ray Scattering (WAXS), 101
6.1.1.1. Principle of the Technique, 101
6.1.1.2. Experimental Observations, 101
6.1.2. Differential Scanning Calorimetry (DSC), 103
   6.1.2.1. Observations and Preliminary Interpretations, 103
   6.1.2.2. Crystalline Fraction, 104
6.2. Crystalline Structure of Polymers, 104
   6.2.1. Chain Conformation within the Crystalline Cell, 104
      6.2.1.1. Planar Zigzag, 105
      6.2.1.2. Helical Conformation, 106
   6.2.2. Computer Modeling of a Crystalline Cell, 107
   6.2.3. Crystalline Polymorphism, 108
6.3. Morphology of Semicrystalline Polymers, 108
   6.3.1. Isolated Lamellae, 109
   6.3.2. Organization of the Lamellae Formed by Crystallization
      from Polymer Solutions, 110
   6.3.3. Crystallization from Bulk Polymers, 110
      6.3.3.1. Fringed Micelles, 110
      6.3.3.2. Spherulites, 111
   6.3.4. Morphologies Resulting from Specific Processing
      Conditions, 112
      6.3.4.1. Trans-Crystallization, 112
      6.3.4.2. Strain-Induced Crystallization of
      Un-Cross-Linked Polymers, 112
      6.3.4.3. Strain-Induced Crystallization of Elastomer
              Networks, 113
6.4. Crystallization Kinetics, 113
   6.4.1. Primary Crystallization, 113
   6.4.2. General Avrami Equation, 115
   6.4.3. Growth Theories, 115
   6.4.4. Secondary Crystallization, 115
6.5. Melting Temperature of Crystalline Domains, 116
   6.5.1. Melting of a Crystal of Infinite Size, 116
   6.5.2. Melting of a Crystalline Lamella of Finite Size, 116
   6.5.3. Multiple Melting, 116
   6.5.4. Effect of Chain Ends, 118
6.6. Influence of the Polymer Chemical Structure, 118
   6.6.1. Chemical Structure Conditions for Crystallization, 118
   6.6.2. Effect of the Chemical Structure on the Melting
      Temperature, 120
6.7. Glass Transition of Semicrystalline Polymers, 120
   6.7.1. Macroscopic Approach, 120
   6.7.2. Molecular Investigation, 121
6.8. Conclusions, 121
    References, 122
    Further Reading, 122

PART II

7 Elastic and Hyperelastic Behaviors

7.1. Definition and Physical Origin of an Elastic Behavior, 125
    7.1.1. Definition, 125
    7.1.2. Physical Origin, 125
7.2. Enthalpic Elasticity (True Elasticity), 128
  7.2.1. Stress–Strain Curve, 128
  7.2.2. States of Stress and Strain, 128
  7.2.3. Expression of Hooke’s Law in Terms of Elastic Constants, 129
  7.2.4. Expression of Hooke’s Law in Terms of Compliances, 130
  7.2.5. Expression of Hooke’s Law in the Case of Simple
        Loadings, 130
7.3. Entropic Elasticity (Hyperelasticity or Rubber Elasticity), 132
  7.3.1. Force–Extension Curve, 132
  7.3.2. Entropic Deformation of a Polymer Coil, 133
  7.3.3. Conditions for Entropic Elasticity, 134
  7.3.4. Molecular Theories of Network Entropic Elasticity, 134
    7.3.4.1. The Affine Model, 134
    7.3.4.2. The Phantom Network Model, 136
    7.3.4.3. Comparison of Affine and Phantom Models with
             Experimental Results, 137
    7.3.4.4. The Constrained Junction Fluctuation Model, 138
    7.3.4.5. Chain Confinement in a Tube and Sliding
             Entanglements, 139
  7.3.5. The Mooney–Rivlin Equation, 141
  7.3.6. Micromechanical Model of a Tri-dimensional Network, 142
  7.3.7. Elastic Behavior at Large Strain, 143
  7.3.8. Non-elastic Behavior at Large Strain, 143
7.4. Conclusions, 144
References, 144
Further Reading, 145

8 Linear Viscoelastic Behavior

8.1. Introduction and Definitions, 147
8.2. Transient Mechanical Measurements, 148
  8.2.1. Creep Tests, 148
  8.2.2. Stress Relaxation Test, 149
8.3. Dynamic Mechanical Tests, 149
  8.3.1. Definition of Dynamic Descriptors, 149
  8.3.2. Typical Viscoelastic Behavior, 151
8.4. Analogical Mechanical Models, 151
  8.4.1. Kelvin–Voigt and Maxwell Analogical Models, 151
  8.4.2. Generalized Kelvin–Voigt and Maxwell Models, 152
8.5. Time (or Frequency)–Temperature Equivalence Principle, 154
  8.5.1. Formal Expressions of the Equivalence Principle, 154
  8.5.2. Master Curves, 155
  8.5.3. Relevance of Master Curves, 155
8.6. Examples of Viscoelastic Behavior, 156
  8.6.1. Creep Behavior of PS Near \( T_g \), 156
  8.6.2. Stress Relaxation Behavior of PS Near \( T_g \), 157
  8.6.3. Dynamic Mechanical Behavior of PS Near \( T_g \), 157
  8.6.4. Analysis of the \( \alpha_n \) Shift Factors in the \( T_g \) Region, 158
  8.6.5. Behavior of Entangled Polymers on the Rubbery Plateau, 160
  8.6.6. Behavior of Glassy Polymers in the Secondary
         Relaxation Range, 161
8.7. Conclusions, 163
References, 164
Further Reading, 164
9 Anelastic and Viscoplastic Behaviors  165

9.1. Investigation of Stress–Strain Curves, 165
  9.1.1. Uniaxial Compression Test; Temperature and Strain Rate Effects, 165
  9.1.2. Shear Test and Hydrostatic Pressure Effect, 167
  9.1.3. Uniaxial Tensile Test and Brittle–Ductile Transition, 169

9.2. Yield Criteria, 169
  9.2.1. Tresca and von Mises Yield Criteria for Metallic Materials, 170
   9.2.1.1. Tresca Criterion, 170
   9.2.1.2. von Mises Criterion, 170
  9.2.2. Plasticity Criteria for Polymer Materials, 171

9.3. Molecular Interpretation of Yielding, 173
  9.3.1. Role of α and β Molecular Motions, 174
  9.3.2. The Ree–Eyring Model, 174
  9.3.3. The Robertson Model, 176

9.4. Specific Behavior in the Viscoplastic Range, 178
  9.4.1. Observed Behavior Under Compression, 178
  9.4.2. Plastic Instability in Tension, 179

9.5. Inhomogeneous Plastic Deformation of Semicrystalline Polymers, 181

9.6. Conclusions, 183
  References, 183
  Further Reading, 184

10 Damage and Fracture of Solid Polymers  185

10.1. Micromechanisms of Deformation, 185
  10.1.1. Shear Bands, 185
  10.1.2. Crazes, 186
   10.1.2.1. Craze Morphology, 186
   10.1.2.2. Mechanisms of Craze Initiation, Growth, and Breakdown, 187
   10.1.2.3. Crazes Formed Under a Chemical Environment (Stress-Cracking), 189
   10.1.2.4. Role of Chain Entanglements in the Craze Formation, 190
   10.1.2.5. Correlation Between the Nature of the Stress Field and the Craze Formation, 191
   10.1.2.6. Competition Between Shear Banding and Crazing, 192
  10.1.3. Interaction Between Shear Banding and Crazing, 193
  10.1.4. Specific Damage of Semicrystalline Polymers, 194

10.2. Fracture Mechanics, 196
  10.2.1. The Crack Opening Modes, 196
  10.2.2. Definition of Plane Stress and Plane Strain Conditions, 196
  10.2.3. Revisiting the Brittle–Ductile Transition, 196
  10.2.4. Brittle Fracture Criteria, 197
   10.2.4.1. The Griffith Criterion, 197
   10.2.4.2. The Irwin Criterion, 199
   10.2.4.3. Correlation Between $G_{c}$ and $K_{c}$, 200
  10.2.5. Plastic Zone at the Crack Tip, 200
  10.2.6. The Dugdale Criterion, 201

10.3. $G_{c}$ and $K_{c}$ Determinations and Values, 201
  10.3.1. Principles of Determination of $G_{c}$ and $K_{c}$, 202
  10.3.2. Experimental Tests, 203
10.3.2.1. Compact Tension and Three-Point Bending, 203
10.3.2.2. Other Fracture Tests, 204
10.3.2.3. Conditions for $G_c$ and $K_c$ Determination, 204
10.3.2.4. Crack Tip Blunting, 204
10.3.3. $G_c$ and $K_c$ Values, 205
10.3.3.1. Typical Values at Room Temperature, 205
10.3.3.2. Effect of Test Temperature, 206
10.3.3.3. Dependence of $G_c$ and $K_c$ on Crack Propagation Rate, 206
10.3.3.4. Dependence of $G_c$ and $K_c$ on Polymer Molecular Weight, 206

10.4. Fatigue Fracture, 207
10.4.1. Experimental Tests, 207
10.4.2. The Wholer Curve, 207
10.4.3. The Paris Expression, 208

10.5. Molecular Approach of Fracture Behavior, 208

10.6. Conclusions, 209
References, 210
Further Reading, 210

PART III

11 Mechanical Properties of Poly(Methyl Methacrylate) and Some of Its Random Copolymers

11.1. Poly(Methyl Methacrylate), 213
11.1.1. $\gamma$ Secondary Relaxation, 213
11.1.2. Plastic Deformation, 214
11.1.2.1. Compression Behavior, 214
11.1.2.2. Molecular Interpretation of Plastic Deformation and Relation with $\beta$ Relaxation Processes, 215
11.1.3. Micromechanisms of Deformation and Relations with $\beta$ Relaxation Processes, 216
11.1.4. Micromechanisms of Fracture and Relations with $\beta$ Relaxation Processes, 216

11.2. Methyl Methacrylate-co-maleimide Random Copolymers, 216

11.3. Methyl Methacrylate-co-$N$-cycohexylmaleimide Random Copolymers, 217
11.3.1. Secondary Relaxations, 217
11.3.2. Plastic Deformation, 218
11.3.2.1. Compression Behavior, 218
11.3.2.2. Relations with $\beta$ Relaxation Motions, 218
11.3.3. Micromechanisms of Deformation and Relations with $\beta$ Relaxation Processes, 218
11.3.4. Fracture, 219

11.4. Methyl Methacrylate-co-$N$-methylglutarimide Random Copolymers, 219
11.4.1. $\beta$ Relaxation, 219
11.4.2. Plastic Deformation, 219
11.4.2.1. Compression Behavior, 219
11.4.2.2. Relations with $\beta$ Relaxation Motions, 219
11.4.3. Micromechanisms of Deformation and Relations with $\beta$ Relaxation Motions, 220
11.4.4. Fracture, 220
11.5. Conclusions, 221
References, 221
Further Reading, 221

12 Mechanical Properties of Bisphenol-A Polycarbonate

12.1. Neat BPA-PC, 223
12.1.1. β Secondary Relaxation, 223
12.1.2. Plastic Deformation, 224
  12.1.2.1. Compression Behavior, 224
  12.1.2.2. Relation with β Relaxation Motions, 224
12.1.3. Micromechanisms of Deformation and Relations with the β Relaxation, 225
12.1.4. Micromechanisms of Fracture and Relations with the β Relaxation, 226
12.2. Antiplasticized BPA-PC, 227
  12.2.1. Antiplasticizers, 227
  12.2.2. Yielding and Fracture of Antiplasticized BPA-PC and Relations with the β Relaxation, 227
12.3. Other Tough Polymers, 227
12.4. Conclusions, 227
References, 228
Further Reading, 228

13 Mechanical Properties of Epoxy Resins

13.1. Synthesis of Epoxy Resins, 229
13.2. Molecular Mobility in the Solid State, 230
  13.2.1. Secondary Relaxations, 230
    13.2.1.1. β Relaxation in Neat Epoxy Resins, 230
    13.2.1.2. β Relaxation in Antiplasticized Epoxy Resins, 232
    13.2.1.3. Effect of β Relaxation on Young Modulus at 25°C, 233
  13.2.2. α Relaxation, 233
    13.2.2.1. Effect of Chemical Structure, 233
    13.2.2.2. Effect of Cross-Link Density, 233
13.3. Plastic Behavior, 233
  13.3.1. Yielding Behavior of Neat Epoxy Resins, 233
    13.3.1.1. Comparison with the Ree-Eyring Model, 234
    13.3.1.2. Comparison with the Robertson Model, 234
    13.3.1.3. Effect of Chemical Structure, 234
  13.3.2. Yielding of Antiplasticized Epoxy Resins, 235
13.4. Fracture Behavior, 236
  13.4.1. Deformation Micromechanisms, 236
  13.4.2. Different Fracture Types, 236
    13.4.2.1. Stable Brittle Fracture, 236
    13.4.2.2. Unstable Semi-brittle Fracture, 236
    13.4.2.3. Stable Ductile Fracture, 238
  13.4.3. Effect of Yield Stress, 238
  13.4.4. Effect of Chemical Structure and Cross-Link Density on Toughness, 238
13.5. Conclusions, 239
References, 239
Further Reading, 239
14 Polyethylene and Ethylene-α-olefin Copolymers 241

14.1.1. Radical Polymerization, 241
14.1.2. Ziegler-Natta-Catalyzed Polymerization, 241
14.1.3. Metallocene-Catalyzed Polymerization, 243

14.2. Morphology, 244
14.2.1. HDPE, 244
14.2.2. Ethylene-α-olefin Copolymers Resulting from Metallocene Catalysis, 245
14.2.2.1. Influence of the Degree of Branching, 245
14.2.2.2. Influence of the Branch Length, 245
14.2.3. Ethylene-α-olefin Copolymers Resulting from Ziegler-Natta Catalysis, 246
14.2.4. Free-Radical LDPEs, 247

14.3. Mechanical Properties, 247
14.3.1. Mechanical Relaxations, 247
14.3.2. Stress–Strain Behavior, 248
14.3.3. Plastic Behavior, 248

14.4. Conclusions, 250

References, 250
