CONTENTS

Preface ........................................................................................................................................... xi

Materials Research Society Symposium Proceedings ............................................................... xii

MATERIALS FOR SENSORS AND ACTUATORS

* Piezoresistive Cantilever Optimization and Applications ......................................................... 3
  Joseph C. Doll, Sung-Jin Park, Nahid Harjee,
  Ali J. Rastegar, Joseph R. Mallon, Bryan C. Petzold,
  Ginel C. Hill, A.A. Barlian, and Beth Pruitt

* ZnO Thin Film Surface Acoustic Wave based Lab-on-a-Chip ..................................................... 15
  Jack Luo, Yongqing R. Fu, Xiaoye Du, Daesik Lee,
  Sung Maeng, Andrew Flewitt, and Bill Milne

MEMS Microresonators for High Temperature Sensor Applications ........................................... 27
  Dharanipal Doppalapudi, Richard Mlcak,
  Jeremie LeClair, Patrick Gwynne, Jeffrey Bridgham,
  Scott Purchase, Martin Skelton, Gerald Schultz, and
  Harry Tuller

Towards NEMS Fluid Sensors Based on Suspended Nanomaterials ........................................... 33
  Luis A. Jauregui, Hao Lu, Jun Lou, and
  Yong Chen

Effect of Humidity on Dielectric Charging Process in Electrostatic Capacitive RF MEMS Switches Based on Kelvin Probe Force Microscopy Surface Potential Measurements ......................................................... 39
  Usama Zaghloul, George Papaioannou,
  Fabio Coccetti, Patrick Pons, and Robert Plana

In-Situ Measurement of Actuation in Thin Films of Conducting Polymers ............................... 45
  Lauren Montemayor, Priam V. Pillai, and
  Ian W. Hunter

*Invited Paper
A Low-Range Drift-Free Bio-Compatible Pressure Sensor
Based on P(VDF-TrFE) Piezoelectric Thin Film ..............................51
Xiaoyang Li, Timothy Reissman, Fan Yu, and
Edwin C. Kan

Fabrication of Microfluidic Devices in Thermoplastic
Elastomeric Materials for DNA Detection on Thermal
Plastic Substrate ...........................................................................57
Kebin Li, Daniel Brassard, Francois Normandin,
Caroline Miville-Godin, Matthias Geissler,
Emmanuel Roy, and Teodor Veres

Thin Film Bulk Acoustic Wave Resonators for Continuous
Monitoring in the Physical, Chemical and Biological
Realms ..........................................................................................63
Greg Ashley, Jack Luo, Paul Kirby, Timothy Butler,
and David Cullen

Densely-Packed Microbowl Array With Balanced
Dielectrophoretic Forces for Single-Cell Microarray .....................69
Maesoon Im, Dong-Haen Kim, Joo-Hyung Lee,
Jun-Bo Yoon, and Yang-Kyu Choi

Control and Operation Schemes for Micro-Thermal
Conductivity Detectors in Gas Chromatography .........................75
Bradley C. Kaanta, Hua Chen, and Xin Zhang

MICROSCALE MECHANICAL BEHAVIOR

Effect of Thin Aluminum Coatings on Structural Damping
of Silicon Microresonators ..............................................................83
Guruprasad Sosale, Sairam Prabhakar, Luc Frechette,
and Srikar Vengallatore

Size-Dependent Mechanical Properties of Polymer-
Nanowires Fabricated by Two-Photon Lithography .......................89
Satoru Shoji, Sana Nakanishi, Tomoki Hamano,
and Satoshi Kawata

Synthesis and Characterization of Nanocomposite
Thin Films for MEMS Applications .............................................99
Kaushik Das, Cheol Park, Rosemary Le Faive,
Pascal Hubert, and Srikar Vengallatore
Measuring the Young's Relaxation Modulus of PDMS Using Stress Relaxation Nanoindentation ......................................................... 105
Ping Du, Hongbing Lu, and Xin Zhang

Mechanical Characterization of Atomic Layer Deposited (ALD) Alumina for Applications in Corrosive Environments ........................................................................................................... 111
Kuang-Shun Ou, I-Kuan Lin, Ping-Hsin Wu, Zhi-Kai Huang, Kuo-Shen Chen, and Xin Zhang

Suppression of Inelastic Deformation in Multilayer Microcantilevers With Nanoscale Coating ................................................................. 117
I-Kuan Lin, Xin Zhang, and Yanhang Zhang

The Tunability in Mechanical Properties and Fracture Toughness of Sputtered Silicon Oxynitride Thin Films for MEMS-Based Infrared Detectors ......................................................................................................... 123
I-Kuan Lin, Ping-Hsin Wu, Kuang-Shun Ou, Kuo-Shen Chen, and Xin Zhang

ADVANCED MATERIALS AND PROCESSES

Micromachined Active Piezoelectric Structures for Applications Above 600°C .......................................................................................... 131
Jan Sauerwald, Denny Richter, Holger Fritze, Erik Ansorge, and Bertram Schmidt

Polycrystalline Silicon-Germanium Electrode Contact Technology Improvement for MEMS Applications ........................................................................... 137
Gert Claes, Simone Severi, Stefaan Decoutere, Jean-Pierre Celis, and Ann Witvrouw

Thickness-Dependant Electrical Characteristics of Nitrogen-Doped Polycrystalline 3C-SiC Thin Films Deposited by LPCVD ........................................................................................................... 143
Man I. Lei, Te-Hao Lee, and Mehran Mehregany

The Effect of Ion Delivery on Polypyrrole Strain and Strain Rate Under Elevated Temperature ............................................................... 149
Yenmei Keng, Priam V. Pillai, and Ian W. Hunter
Fabrication, Transport and Raman Studies of Pulsed Laser Deposited Al/Ga Doped PBCO Thin Films ......................................................... 155
Horn R. Kandel, Tar-Pin Chen, Hye-Won Seo, Milko Iliev, Paritosh Wadekar, Jing-Biao Cui, Quark Chen, Fumiya Watanabe, Zhongrui Li, Lixi Yuan, Dever Norman, and Shouzheng Wang

Fourier Transform Infrared Spectroscopy Characterization of AlN Thin Films Grown on Sacrificial Silicon Oxide Layers via Metal Organic Vapor Phase Epitaxy ............................................. 161
Sridhar Kuchibhatla, L.E. Rodak, and D. Korakakis

Aluminum Thermo Compression Bonding Characterization ........................................ 167
Erkan Cakmak, Viorel Dragoi, Eric Pabo, Thorsten Matthias, and T.L. Alford

Advanced Wet Etch Bulk Micromachining in {100} Silicon Wafers ................................................ 173
Prem Pal and Kazuo Sato

Microscale Patterning of Single Crystal Diamond Using Sidero-Metal/Diamond Thermochemical Reaction ...................................................................................... 179
Yuko Morofushi, Hajime Matsushita, and Norihisa Miki

A Simple Technique for Sub-10 nm Planar Nanofluidic Channel Fabrication ...................... 185
Chunrong Song and Pingshan Wang

Microwave Absorbing Ferrite Thin Films for Microwave Heating of Microstructured Reactors ..................................................................................... 191
Gregory Kozlowski, Pengzhao Gao, Evgeny V. Rebrov, Jaap C. Schouten, Richard Kleismit, John Cetnar, and Guru Subramanyam

Liquid Encapsulation by Bonding-in-Liquid Technique ......................................................... 197
Yoshiyuki Okayama, Keijiro Nakahara, Takeshi Ninomiya, Yasuaki Matsumoto, and Norihisa Miki
