Preface xxxi

CHAPTER 1 Molecular Photochemistry of Organic Compounds: An Overview

1.1 What Is Molecular Organic Photochemistry? 1
1.2 Learning Molecular Organic Photochemistry through the Visualization of Molecular Structures and the Dynamics of Their Transformations 3
1.3 Why Study Molecular Organic Photochemistry? 3
1.4 The Value of Pictorial Representations and Visualization of Scientific Concepts 5
1.5 Scientific Paradigms of Molecular Organic Photochemistry 6
1.6 Exemplars as Guides to the Experimental Study and Understanding of Molecular Organic Photochemistry 7
1.7 The Paradigms of Molecular Organic Photochemistry 8
1.8 Paradigms as Guides for Proceeding from the Possible to the Plausible to the Probable Photochemical Processes 8
1.9 Some Important Questions that Will Be Answered by the Paradigms of Molecular Organic Photochemistry 10
1.10 From a Global Paradigm to the Everyday Working Paradigm 11
1.11 Singlet States, Triplet States, Diradicals, and Zwitterions: Key Structures Along a Photochemical Pathway from \( \ast R \) to \( P \) 14
1.12 State Energy Diagrams: Electronic and Spin Isomers 16
1.13 An Energy Surface Description of Molecular Photochemistry 20
CHAPTER 2 Electronic, Vibrational, and Spin Configurations of Electronically Excited States

2.1 Visualization of the Electronically Excited Structures through the Paradigms of Molecular Organic Photochemistry 39
2.2 Molecular Wave Functions and Molecular Structure 42
2.3 The Born–Oppenheimer Approximation: A Starting Point for Approximate Molecular Wave Functions and Energies 45
2.4 Important Qualitative Characteristics of Approximate Wave Functions 47
2.5 From Postulates of Quantum Mechanics to Observations of Molecular Structure: Expectation Values and Matrix Elements 49
2.6 The Spirit of the Use of Quantum Mechanical Wave Functions, Operators, and Matrix Elements 50
2.7 From Atomic Orbitals, to Molecular Orbitals, to Electronic Configurations, to Electronic States 51
2.8 Ground and Excited Electronic Configurations 52
2.9 The Construction of Electronic States from Electronic Configurations 56
2.10 Construction of Excited Singlet and Triplet States from Electronically Excited Configurations and the Pauli Principle 56
2.11 Characteristic Configurations of Singlet and Triplet States: A Shorthand Notation 57
2.12 Electronic Energy Difference between Molecular Singlet and Triplet States of *R: Electron Correlation and the Electron Exchange Energy 58
2.13 Evaluation of the Relative Singlet and Triplet Energies and Singlet–Triplet Energy Gaps for Electronically Excited States (*R) of the Same Electronic Configuration 60
2.14 Exemplars for the Singlet–Triplet Splittings in Molecular Systems 63
2.15 Electronic Energy Difference between Singlet and Triplet States of Diradical Reactive Intermediates: Radical Pairs, I(RP), and Biradicals, I(BR)  66

2.16 A Model for Vibrational Wave Functions: The Classical Harmonic Oscillator  69

2.17 The Quantum Mechanical Version of the Classical Harmonic Oscillator  75

2.18 The Vibrational Levels of a Quantum Mechanical Harmonic Oscillator  77

2.19 The Vibrational Wave Functions for a Quantum Mechanical Harmonic Oscillator: Visualization of the Wave Functions for Diatomic Molecules  78

2.20 A First-Order Approximation of the Harmonic-Oscillator Model: The Anharmonic Oscillator  80

2.21 Building Quantum Intuition for Using Wave Functions  82

2.22 Electron Spin: A Model for Visualizing Spin Wave Functions  82

2.23 A Vector Model of Electron Spin  85

2.24 Important Properties of Vectors  85

2.25 Vector Representation of Electron Spin  86

2.26 Spin Multiplicities: Allowed Orientations of Electron Spins  87

2.27 Vector Model of Two Coupled Electron Spins: Singlet and Triplet States  89

2.28 The Uncertainty Principle and Cones of Possible Orientations for Electron Spin  92

2.29 Cones of Possible Orientations for Two Coupled 1/2 Spins: Singlet and Triplet Cones of Orientation as a Basis for Visualizing the Interconversion of Spin States  93

2.30 Making a Connection between Spin Angular Momentum and Magnetic Moments Due to Spin Angular Momentum  94

2.31 The Connection between Angular Momentum and Magnetic Moments: A Physical Model for an Electron with Angular Momentum  94

2.32 The Magnetic Moment of an Electron in a Bohr Orbit  95

2.33 The Connection between Magnetic Moment and Electron Spin  97

2.34 Magnetic Energy Levels in an Applied Magnetic Field for a Classical Magnet  99

2.35 Quantum Magnets in the Absence of Coupling Magnetic Fields  101

2.36 Quantum Mechanical Magnets in a Magnetic Field: Constructing a Magnetic State Energy Diagram for Spins in an Applied Magnetic Field  102

2.37 Magnetic Energy Diagram for a Single Electron Spin and for Two Coupled Electron Spins  103
2.38 Magnetic Energy Diagrams Including the Electron Exchange Interaction, J 104
2.39 Interactions between Two Magnetic Dipoles: Orientation and Distance Dependence of the Energy of Magnetic Interactions 106
2.40 Summary: Structure and Energetics of Electrons, Vibrations, and Spins 108
References 108

CHAPTER 3 Transitions between States: Photophysical Processes 109

3.1 Transitions between States 109
3.2 A Starting Point for Modeling Transitions between States 111
3.3 Classical Chemical Dynamics: Some Preliminary Comments 112
3.4 Quantum Dynamics: Transitions between States 113
3.5 Perturbation Theory 113
3.6 The Spirit of Selection Rules for Transition Probabilities 118
3.7 Nuclear Vibrational Motion As a Trigger for Electronic Transitions. Vibronic Coupling and Vibronic States: The Effect of Nuclear Motion on Electronic Energy and Electronic Structure 119
3.8 The Effect of Vibrations on Transitions between Electronic States: The Franck-Condon Principle 122
3.9 A Classical and Semiclassical Harmonic Oscillator Model of the Franck-Condon Principle for Radiative Transitions (R + hν → *R and *R → R + hν) 124
3.10 A Quantum Mechanical Interpretation of the Franck-Condon Principle and Radiative Transitions 128
3.11 The Franck-Condon Principle and Radiationless Transitions (*R → R + heat) 130
3.12 Radiationless and Radiative Transitions between Spin States of Different Multiplicity 134
3.13 Spin Dynamics: Classical Precession of the Angular Momentum Vector 135
3.14 Precession of a Quantum Mechanical Magnet in the Cones of Possible Orientations 139
3.15 Important Characteristics of Spin Precession 141
3.16 Some Quantitative Benchmark Relationships between the Strength of a Coupled Magnetic Field and Precessional Rates 142
3.17 Transitions between Spin States: Magnetic Energies and Interactions 144
3.18 The Role of Electron Exchange (J) in Coupling Electron Spins 144
3.19 Couplings of a Spin with a Magnetic Field: Visualization of Spin Transitions and Intersystem Crossing 146
3.20 Vector Model for Transitions between Magnetic States 148
3.21 Spin–Orbit Coupling: A Dominant Mechanism for Inducing Spin Changes in Organic Molecules 149
3.22 Coupling of Two Spins with a Third Spin: $T_+ \rightarrow S$ and $T_- \rightarrow S$ Transitions 157
3.23 Coupling Involving Two Correlated Spins: $T_0 \rightarrow S$ Transitions 158
3.24 Intersystem Crossing in Diradicals, I(D): Radical Pairs, I(RP), and Biradicals, I(BR) 159
3.25 Spin–Orbit Coupling in I(D): The Role of Relative Orbital Orientation 160
3.26 Intersystem Crossing in Flexible Biradicals 164
3.27 What All Transitions between States Have in Common 166

References 167

CHAPTER 4 Radiative Transitions between Electronic States 169

4.1 The Absorption and Emission of Light by Organic Molecules 169
4.2 The Nature of Light: A Series of Paradigm Shifts 169
4.3 Black-Body Radiation and the “Ultraviolet Catastrophe” and Planck’s Quantization of Light Energy: The Energy Quantum Is Postulated 172
4.4 The “Photoelectric Effect” and Einstein’s Quantization of Light—The Quantum of Light: Photons 173
4.5 If Light Waves Have the Properties of Particles, Do Particles Have the Properties of Waves? —de Broglie Integrates Matter and Light 176
4.6 Absorption and Emission Spectra of Organic Molecules: The State Energy Diagram as a Paradigm for Molecular Photophysics 178
4.7 Some Examples of Experimental Absorption and Emission Spectra of Organic Molecules: Benchmarks 178
4.8 The Nature of Light: From Particles to Waves to Wave Particles 181
4.9 A Pictorial Representation of the Absorption of Light 181
4.10 The Interaction of Electrons with the Electric and Magnetic Forces of Light 182
4.11 A Mechanistic View of the Interaction of Light with Molecules: Light as a Wave 184
4.12 An Exemplar of the Interaction of Light with Matter: The Hydrogen Atom 185
4.13 From the Classical Representation to a Quantum Mechanical Representation of Light Absorption by a Hydrogen Atom and a Hydrogen Molecule 188
4.14 Photons as Massless Reagents 191
4.15 Relationship of Experimental Spectroscopic Quantities to Theoretical Quantities 194
4.16 The Oscillator Strength Concept 195

CHAPTER 5 Photophysical Radiationless Transitions

5.1 Photophysical Radiationless Transitions As a Form of Electronic Relaxation 265
5.2 Radiationless Electronic Transitions as the Motion of a Representative Point on Electronic Energy Surfaces 266
5.3 Wave Mechanical Interpretation of Radiationless Transitions between States 270
5.4 Radiationless Transitions and the Breakdown of the Born–Oppenheimer Approximation 275
5.5 An Essential Difference between Strongly Avoiding and Matching Surfaces 275
5.6 Conical Intersections Near Zero-Order Surface Crossings 275
5.7 Formulation of a Parameterized Model of Radiationless Transitions 276
5.8 Visualization of Radiationless Transitions Promoted by Vibrational Motion; Vibronic Mixing 277
5.9 Intersystem Crossing: Visualization of Radiationless Transitions Promoted by Spin–Orbit Coupling 281
5.10 Selection Rules for Intersystem Crossing in Molecules 282
5.11 The Relationship of Rates and Efficiencies of Radiationless Transitions to Molecular Structure: Stretching and Twisting as Mechanisms for Inducing Electronic Radiationless Transitions 287
5.12 The “Loose Bolt” and “Free-Rotor” Effects: Promoter and Acceptor Vibrations 288
5.13 Radiationless Transitions between “Matching” Surfaces Separated by Large Energies 291
5.14 Factors That Influence the Rate of Vibrational Relaxation 293
5.15 The Evaluation of Rate Constants for Radiationless Processes from Quantitative Emission Parameters 296
5.16 Examples of the Estimation of Rates of Photophysical Processes from Spectroscopic Emission Data 298
5.17 Internal Conversion ($S_n \rightarrow S_1$, $S_1 \rightarrow S_0$, $T_n \rightarrow T_1$) 300
5.18 The Relationship of Internal Conversion to the Excited-State Structure of $^1R$ 301
5.19 The Energy Gap Law for Internal Conversion ($S_1 \rightarrow S_0$) 303
5.20 The Deuterium Isotope Test for Internal Conversion 304
5.21 Examples of Unusually Slow $S_n \rightarrow S_1$ Internal Conversion 305
5.22 Intersystem Crossing from $S_1 \rightarrow T_1$ 306
5.23 The Relationship Between $S_1 \rightarrow T_1$ Intersystem Crossing to Molecular Structure 307
5.24 Temperature Dependence of $S_1 \rightarrow T_n$ Intersystem Crossing 308
5.25 Intersystem Crossing ($T_1 \rightarrow S_0$) 309

### CHAPTER 7 Energy Transfer and Electron Transfer 383

7.1 Introduction to Energy and Electron Transfer 383
7.2 The Electron Exchange Interaction for Energy and Electron Transfer 387
7.3 “Trivial” Mechanisms for Energy and Electron Transfer 391
7.4 Energy Transfer Mechanisms 396
7.5 Visualization of Energy Transfer by Dipole–Dipole Interactions: A Transmitter–Antenna Receiver–Antenna Mechanism 399
7.6 Quantitative Aspects of the Förster Theory of Dipole–Dipole Energy Transfer 400
7.7 The Relationship of $k_{ET}$ to Energy-Transfer Efficiency and Separation of Donor and Acceptor $R_{DA}$ 404
7.8 Experimental Tests for Dipole–Dipole Energy Transfer 406
7.9 Electron Exchange Processes: Energy Transfer Resulting from Collisions and Overlap of Electron Clouds 411
7.10 Electron Exchange: An Orbital Overlap or Collision Mechanism of Energy Transfer 411
7.11 Electron-Transfer Processes Leading to Excited States 413
7.12 Triplet–Triplet Annihilation (TTA): A Special Case of Energy Transfer via Electron Exchange Interactions 414
7.13 Electron Transfer: Mechanisms and Energetics 416
7.14 Marcus Theory of Electron Transfer 424
7.15 A Closer Look at the Reaction Coordinate for Electron Transfer 436
7.16 Experimental Verification of the Marcus Inverted Region for Photoinduced Electron Transfer 438
7.17 Examples of Photoinduced Electron Transfer That Demonstrate the Marcus Theory 441
7.18 Long-Distance Electron Transfer 441
7.19 Mechanisms of Long-Distance Electron Transfer: Through-Space and Through-Bond Interactions 442
7.20 A Quantitative Comparison of Triplet-Triplet Energy and Electron Transfer 445
7.21 A Connection between Intramolecular Electron, Hole, and Triplet Transfer 446
7.22 Photoinduced Electron Transfer between Donor and Acceptor Moieties Connected by a Flexible Spacer 447
7.23 Experimental Observation of the Marcus Inversion Region for Freely Diffusing Species in Solution 448
7.24 Control of the Rate and Efficiency of Electron-Transfer Separation by Controlling Changes in the Driving Force for Electron Transfer 449
7.25 Application of Marcus Theory to the Control of Product Distributions 451
7.26 The Continuum of Structures from Charge Transfer to Free Ions: Exciplexes, Contact Ion Pairs, Solvent Separated Radical Ion Pairs, and Free Ion Pairs 454
7.27 Comparison between Exciplexes and Contact Radical Ion Pairs 458
7.28 Energy and Electron-Transfer Equilibria 461
7.29 Energy-Transfer Equilibria 461
7.30 Electron-Transfer Equilibria in the Ground State 463
7.31 Excited-State Electron-Transfer Equilibria 463
7.32 Excited-State Formation Resulting from Electron-Transfer Reactions: Chemiluminescent Reactions 464
7.33 Role of Molecular Diffusion in Energy and Electron-Transfer Processes in Solution 466
7.34 An Exemplar Involving Energy Transfer Controlled by Diffusion 467
7.35 Estimation of Rate Constants for Diffusion Controlled Processes 469
7.36 Examples of Near-Diffusion-Controlled Reactions: Reversible Formation of Collision Complexes 472
7.37 The Cage Effect 474
7.38 Distance–Time Relationships for Diffusion 476
7.39 Diffusion Control in Systems Involving Charged Species 478
7.40 Summary 479

CHAPTER 8 Mechanistic Organic Photochemistry 483

8.1 Photochemical Reaction Mechanisms 483
8.2 Some Philosophical Comments Concerning the Fundamental Nature of Reaction Mechanisms 488
8.3 Creation of a Standard Mechanistic Set 489
8.4 Use of Kinetic Plausibility in Quantitative Mechanistic Analyses 493
8.5 Introduction to the Reactions of Free Radicals and Biradicals 501
8.6 The Use of Structural Criteria for Mechanistic Analysis: The Role of Reaction Intermediates (*R, I) in Structure–Reactivity Correlations 513
8.7 The Use of Reaction Types and Structural Relationships in Mechanistic Analyses 514
8.8 An Exemplar of the Use of Structural Relationships in Mechanistic Analysis 516
8.9 Rules for Proceeding from Rate Laws to Photochemical Reaction Mechanisms 518
8.10 Rules for Proceeding from Quantum Yields and Efficiency Laws to Kinetic Information on Photochemical Reaction Mechanisms 524
8.11 Experimental Methods for Determining Rate Constants of Photoreactions 527
8.12 Pulsed Excitation of R to Produce *R 528
8.13 Techniques for Monitoring Upper Electronic States, **R 529
8.14 Low-Temperature Matrix Isolation Techniques 530
8.15 Two-Laser (Two-Color) Flash Photolysis 531
8.16 The Laser Jet Technique 534
8.17 Stern–Volmer Analysis of Photochemical Kinetics: Competition between Unimolecular and Bimolecular Deactivation of *R 535
8.18 Stern–Volmer Quenching: Rate Constants from Efficiency versus Concentration Measurements 537
8.19 Stern–Volmer Analysis Based on Data from Time-Resolved Measurements Using Gated Detection 539
8.20 Experimental Exemplars of the Measurements of Photochemical Rate Constants 540
8.21 Measurement of Absolute Efficiencies in Determining Kinetic Parameters 547
8.22 Kinetics of Reactions Involving More Than One Excited State 549
8.23 The Probe Method for Detecting Spectroscopically “Invisible” Transients 552
8.24 Experimental Measurement of the Efficiency of Radiationless Processes: The Photoacoustic Method 555
8.25 Reactive Intermediates: Experimental Detection and Characterization of *R and I 557
8.26 Applications of Time-Resolved Infrared and Magnetic Resonance Spectroscopic Methods for the Characterization of the Structure and Dynamics of *R and I: The α-Cleavage Reaction of Ketones as an Exemplar 560
8.27 Investigation of the Structure of *R by Time-Resolved Infrared Spectroscopy (TRIR) 562
8.28 Investigation of the α-Cleavage *R → I(RP) Process by TR IR 564
8.29 Time-Resolved Electron Paramagnetic Resonance and CIDEP 564
8.30 Electron Spin Polarization: Deviations from the Boltzmann Distribution of Spins and Its Effect on the Intensities of Magnetic Resonance Signals 565
8.31 Investigation of the Structure of *R(T1) and the Mechanism of the S1 → *R(T1) ISC by TR EPR 567
8.32 Investigation of the Photochemical Primary Process *R → I Process by TR EPR 570
8.33 The Direct Observation of I(RP)gem and I(BR) by TR EPR 572
8.34 Experimental Tests for the Involvement of Electronically Excited States *R: Qualitative Aspects. Deciding between *R(S1) and *R(T1) 572
8.35 Experimental Tests for the Involvement of Electronically Excited States (*R): Quantitative Aspects 575
8.36 The Use of Kinetic Methods to Detect and to Identify Reaction Intermediates, *R and I 579
8.37 Reactions Involving Biradical Intermediates 585
8.38 Spin Chemistry: Spin Selection Rules for Chemical Reactions 593
8.39 Magnetic Effects on Reactions of I(RP) and I(BR) 595
8.40 Kinetic Basis for Magnetic Field Effects (MFE), Magnetic Isotope Effects (MIE) and Chemically Induced Dynamic Nuclear Polarization (CIDNP) 596
8.41 Magnetic Field Effects on the Reactivity and Products of 3I(RP) and 3I(BR) 597
8.42 Magnetic Isotope Effects on the Reactivity and Products of 3I(RP) and 3I(BR) 602
8.43 Chemically Induced Dynamic Nuclear Polarization of Radical Pairs: The Nuclear Spin Orientation Dependence of Chemical Reactivity of 3I(RP)gem 606

CHAPTER 9 Photochemistry of Carbonyl Compounds 629

9.1 Introduction to the Photochemistry of Carbonyl Compounds 629
9.2 Molecular Orbital description of the \( ^*R(n,\pi^*) \): Primary Processes of Carbonyl Compounds 630
9.3 The \( ^*R(n,\pi^*) \) \( \rightarrow \) I Primary Photochemical Processes Based on Frontier Orbital Interactions 632
9.4 The I \( \rightarrow \) P Secondary Thermal Processes Based on Radical Pair, Free Radical, and Biradical Reactions 634
9.5 The Alkoxy Radical: A Close Analogue of the Reactive \( n,\pi^* \) Carbonyl Chromophore 636
9.6 State Energy Diagrams for Ketones 637
9.7 The \( ^*R(n,\pi^*) \) \( \rightarrow \) P Processes of Ketones and Aldehydes 639
9.8 An Exemplar of an n \( \leftarrow \) HO Initiated \( ^*R(n,\pi^*) \) \( \rightarrow \) I Process: The Primary Process of Intermolecular Hydrogen Abstraction 640
9.9 “Invisible Transients” in Radical–Radical Combination Reactions: Transients Formation by Radical–Radical Combination that Revert Back to Starting Materials 641
9.10 The Primary Process of Intermolecular Electron Transfer: Reaction of \( n,\pi^* \) States With Amines 643
9.11 Structure–Reactivity Relationships in Intermolecular Hydrogen Abstraction 646
9.12 The Primary Process of Electron Abstraction: Reactive \( T_1(\pi,\pi^*) \) State 650
9.14 The Primary Photochemical Process of Intramolecular Hydrogen Abstraction: Norrish Type II Reactions 652
9.15 Reactivity and Efficiency Relationships in Type II Reactions 653
9.16 The Product Forming I(BR) \( \rightarrow \) P Step in Type II Reactions: A Paradigm for the Behavior of a 1,4-Biradical 655
9.17 Geometry of \( \gamma \)-Hydrogen Abstraction and Its Consequence on Competing Primary Photochemical Processes 657
9.18 The role of Intersystem Crossing in Determining the Products of Biradicals Produced by \( \gamma \)-Hydrogen Abstraction 661
9.19 Beyond \( \gamma \)-Hydrogen Abstraction: Intramolecular \( 1,n \)-Hydrogen Abstraction 664
9.20 The Primary Process of \( \alpha \)-Cleavage of \( n,\pi^* \) States: Acyclic Ketones 665
9.21 The Primary Process of \( \alpha \)-Cleavage from \( n,\pi^* \) States: Cyclic Ketones 668
9.22 Reactions of Primary Radical Pair Produced from \( \alpha \)-Cleavage 669
9.23 Photochemistry of Cyclobutanones: A Special Case of \( \alpha \)-Cleavage 672
9.24 The Primary Process of \( \alpha \)-Cleavage of \( n,\pi^* \) states. Structure-Reactivity Relationships 673
9.25 An Orbital Model for \( \alpha \)-Cleavage 677
9.26 The Primary Process for Addition of \( n,\pi^* \) States to Electron-Rich \( C=\text{C} \) Bonds 678
9.27 The Primary Process of Addition of \( n,\pi^* \) States to Electron-Rich \( C=\text{C} \): Reaction Intermediates 680
9.28 Evidence for a Biradical Intermediate 682
9.29 Endo–Exo Selectivity During Photoaddition of Excited Carbonyls to Olefins 683
9.30 Examples of [2 + 2] Cycloaddition for \( n,\pi^* \) States to Electron-Poor Ethylenes: An Example of a \( \pi^* \rightarrow \pi^* \) Interaction 684
9.31 Stereoselectivity of the [2 + 2] Cycloaddition of \( n,\pi^* \) States to Ethylenes 688
9.32 Intramolecular [2 + 2] Photocycloaddition 690
9.33 Examples of Photorearrangements Initiated by \( \beta \)-Cleavage Followed by Combination and Disproportionation 691
9.34 Photochemical Fragmentations Initiated by \( \beta \)-Cleavage 694
9.35 Synthetic Applications of the Photoreactions of Carbonyl Compounds 696
9.36 Applications of the Photochemistry of Carbonyl Compounds in Photoimaging 698
9.37 Applications of the Photochemistry of Carbonyl Compounds in Designing “Phototriggers” and “Photoprotecting Groups” 700
9.38 Summary: The Photochemistry of Carbonyl Compounds 701
