Blowing Agents and Foaming Processes

Organised by

Smithers

Cologne, Germany
19-20 May 2010
Contents

Session 1: Blowing Agents and Blowing Gases

Paper 1  A novel procedure to analyse the foamability of thermoplastic forms using in-situ optical expandometry and X-ray radioscopy
Dr Eusebio Solórzano Quijano, Prof M A Rodriguez-Perez, J Pinto & J A de Saja, University of Valladolid, Spain and F Garcia-Moreno, Institute of Applied Materials, Germany

Paper 2  HFO-1234ze(E) and HBA-2: Advancements in low GWP blowing agents
J M Bowman, PE, Honeywell International, USA & Mary Bogan, Honeywell International, UK

Paper 3  Foaming selected thermoplastics under microwave irradiation
Dr Aleksander Prociak, T Sterzyński, D Bogdai, S Michaowski & D Safian, University of Cracow, Poland

Paper 4  The supercritical state paradigm in thermoplastic foaming
Richard Gendron, Michel F Champagne, Jacques Tatibouët & Hongbo Li, Industrial Materials Institute, National Research Council of Canada, Canada

Paper 5  Further development of GWP foam expansion agent with improved insulating performance vs commercially available options today
Gary Loh, Joseph A Creazzo & Mark L Robin, DuPont Company, USA

Paper 6  Investigation of new low GWP blowing agents for rigid polyurethane foams
Laurent Abbas, Arkema, France & Ben Chen, Joseph Costa & Philippe Bonnet, Arkema, USA

Session 2: Injection Moulding Efforts

Paper 7  Case Study: solution with structural foam
Brian Read, Horizon Plastics International Inc, Canada +++ paper unavailable +++

Paper 8  Structural foam compared to other injection moulding processes
Helmut Eckardt, Wittmann Battenfeld GmbH & Co KG, Germany

Paper 9  Using in mold pressure and temperature sensors to monitor the microcellular foaming process
Levi Kishbaugh, Trexel GmbH, Germany & Mark Barry, PPD Tech LLC, USA

Paper 10  Possibilities of microcellular injection moulding with polycarbonate
Dipl-Ing Martin Rohleder, Prof A K Bledzki & Dr H Kirschling, Universität Kassel, Germany

Session 3: Extrusion New Aspects and Results

Paper 11  Physical foaming line for standard and high performance plastics
Joachim Meyke & Matthias Reimker, KraussMaffei Berstorff GmbH, Germany

Paper 12  Investigation of the corrugation in foam sheet extrusion
Dipl Ing Tilo Hildebrand & Prof Dr Ing E h Walter Michaeli, IKV Institute for Plastics Processing at RWTH Aachen University, Germany
Paper 13  The innovation potential of polymer foams
Holger Ruckdäschel, Eric Wassner, Jan Sandler & Klaus Hahn, BASF, Germany

Paper 14  Blowing agent emission from styrofoam extruded polystyrene foams –
A simplified model to estimate the residual blowing agent
Dr Chau V Vo & Friedhelm Bunge, DOW Europe GmbH, Germany & Simon P Lee, Dow Chemical, USA

Paper 15  Retrofitting conventional extrusion lines for physical foaming
Christian Schlummer & Frank Neubauer, Sulzer Chemtech Ltd, Switzerland

Paper 16  Improving the foaming behaviour of linear polypropylene-based TPO by introducing nanoclay
Prof Chul Park & Dr Wentao Zhai, University of Toronto, Canada

Session 4: Special Processes and Techniques

Paper 17  Polyethylene foams produced under a temperature gradient with Expancel® Microspheres and blends thereof
Prof Denis Rodrigue, Jiaolian Yao & Mohamad Reza Barzegari, Université Laval, Canada

Paper 18  Foaming of polypropylene by using both chemical and physical blowing agents – A comparative study of the structure and physical properties
Cristina Saiz Arroyo, Prof MA Rodriguez-Perez & J A de Saja, University of Valladolid & M Antunes & J I Velasco, Universitat Politècnica de Catalunya, Spain

Paper 19  Flexible elastomeric foam insulations – a permanent challenge for the foam manufacturer
Dr Jürgen Weidinger, Armacell International Holding GmbH, Germany

Session 5: Particle Foams

Paper 20  Expanded Polypropylene, a low density manufacturing and applications
Bert Suffis, JSP, France

Paper 21  Correlations between density and bead size on the dynamic mechanical behaviour of polystyrene bead foams
Dipl-Chem Marieluise Stumpf, Frank Fischer & Volker Altstädt, Universität Bayreuth, Germany

Session 6: Detailed Efforts on Nano Techniques and Ageing

Paper 22  Poly(styrene-co-acrylonitrile) foaming with supercritical CO2 : Influence of nanoclay on the foam morphology and flammability
Laetitia Urbanczyk, Serge Bourbigot, Christophe Detrembleur, Christine Jérôme, Phong Minh Tran & Michael Alexandre, University of Liège, Belgium

Paper 23  Myths and facts surrounding long term aging of foam insulation
John Murphy, Foam Supplies, Inc, USA
