Computational Aspects of Algebraic Curves

University of Idaho, USA 26 – 28 May 2005

Editor

Tanush Shaska
Oakland University, USA

World Scientific
## CONTENTS

1. Preface vii
2. Foreword by the Editor ix
3. A new proof for the non-degeneracy of the Frey-Rück pairing and a connection to isogenies over the base field
   E. F. Schaefer 1
4. Elliptic curve torsion points and division polynomials
   I. A. Burhanuddin and M. A. Huang 13
5. Detecting complex multiplication
   J. D. Achter 38
6. Simple numerical uniformatization of elliptic curves
   M. Seppälä 51
7. On the moduli space of Klein four covers of the projective line
   D. Glass and R. Pries 58
8. Field of moduli and field of definition for curves of genus 2
   G. Cardona and J. Quer 71
9. Explicit computation of Hurwitz spectra
   R. Vogeler 84
10. Non-normal Belyi p-gonal surfaces
    A. Wootton 95
11. Hyperelliptic curves of genus 3 with prescribed automorphism group
    J. Gutierrez, D. Sevilla, and T. Shaska 109
12. Curves over finite fields with many points: an introduction
    J. Voight 124
13. Hyperelliptic curves of genus 3 and 4 in characteristic 2
   Y. Demirbas
14. Modular representations on some Riemann-Roch spaces
   of modular curves $X(N)$
   D. Joyner and A. Ksir
15. Genus two curves covering elliptic curves: a computational approach
   T. Shaska
16. A Question about Pic($X$) as a $G$-module
   D. Goldstein, R. Guralnick, and D. Joyner
17. Galois groups of prime degree polynomials with nonreal roots
   A. Bialostocki and T. Shaska
18. Counting generating systems of a finite group from given
   conjugacy classes
   R. Staszewski, H. Völklein, and G. Wiesend
19. Group action on genus 3 curves and their Weierstrass points
   H. Babu and P. Venkataraman
