# Table of Contents

HSCC 2010 Organization ........................................................................................................ viii

Session 1: Compositionality and Abstraction

- **Succinct Discrete Time Approximations of Distributed Hybrid Automata** .................................................. 1  
  P. S. Thiagarajan (National University of Singapore), Shaofa Yang (UNU-IIST)

- **Accurate Hybridization of Nonlinear Systems** ......................................................................................... 11  
  Thao Dang, Oded Maler (CNRS/VERIMAG), Romain Testylier (VERIMAG)

- **Compositional Analysis for Linear Control Systems** ............................................................................... 21  
  Florian Kerber (University of Groningen), Arjan van der Schaft (University of Groningen)

Session 2: Hybrid Control Systems

- **On Integration of Event-based Estimation and Robust MPC in a Feedback Loop** .......................... 31  
  Joris Sijs (TNO, Science & Industry), Mircea Lazar, W. P.M.H. Heemels (Eindhoven University of Technology)

- **From Synchronous Programs to Symbolic Representations of Hybrid Systems** ......................... 41  
  Kerstin Bauer, Klaus Schneider (University of Kaiserslautern)

- **A Descent Algorithm for the Optimal Control of Constrained Nonlinear Switched Dynamical Systems** 51  
  Humberto Gonzalez, Ram Vasudevan, Maryam Kamgarpour, S. Sivanantham, Ruzena Bajcsy, Claire J. Tomlin (University of California, Berkeley)

Session 3: Resource and Scheduling

- **Timed Automata with Observers under Energy Constraints** .............................................................. 61  
  Patricia Bouyer (CNRS & ENS Cachan), Uli Fahrenberg, Kim G. Larsen (Aalborg University), Nicolas Markey (CNRS & ENS Cachan)

- **Real-Time Scheduling of Mixture-of-Experts Systems with Limited Resources** ....................... 71  
  Prapaporn Rattanatamrong, Jose A. B. Fortes (University of Florida)

- **On a Control Algorithm for Time-varying Processor Availability** ............................................... 81  
  Vijay Gupta (University of Notre Dame)

Session 4: Specification and Control

- **Timed I/O Automata: A Complete Specification Theory for Real-time Systems** ............................ 91  
  Alexandre David, Kim G. Larsen (Aalborg University), Axel Legay (INRIA/IRISA), Ulrik Nyman (Aalborg University), Andrzej Wasowski (IT University)

- **Receding Horizon Control for Temporal Logic Specifications** ......................................................... 101  
  Tichakorn Wongpiromsarn, Ufuk Topcu, Richard M. Murray (California Institute of Technology)

- **Synthesis Using Approximately Bisimilar Abstractions: State-Feedback Controllers for Safety Specifications** 111  
  Antoine Girard (Université de Grenoble)

Session 5: Identification and Control

- **Oscillation Analysis of Linearly Coupled Piecewise Affine Systems** .............................................. 121  
  Kenji Kashima, Yasuyuki Kawamura, Jun-ichi Imura (Tokyo Institute of Technology)
- On Infinity Norms as Lyapunov Functions for Piecewise Affine Systems ........................................... 131
  Mircea Lazar, Andrej Jokic (Eindhoven University of Technology)

- Identifiability of Discrete-Time Linear Switched Systems ............................................................. 141
  Mihaly Petreczky (Maastricht University),
  Laurent Bako (Université Lille Nord de France, EM Douai),
  Jan H. van Schuppen (Centrum Wiskunde & Informatica)

Session 6: Applications

- Rank Properties of Poincaré Maps for Hybrid Systems
  with Applications to Bipedal Walking .................................................................................................. 151
  Eric D. B. Wendel, Aaron D. Ames (Texas A&M University)

- Stealthy Deception Attacks on Water SCADA Systems ........................................................................ 161
  Saurabh Amin (University of California, Berkeley), Xavier Litrico (Cemagref, UMR G-EAU),
  S. Shankar Sastry, Alexandre M. Bayen (University of California, Berkeley)

- A Hybrid System Model of Seasonal Snowpack Water Balance ......................................................... 171
  Branko Kerkez, Steven D. Glaser, John A. Dracup (University of California, Berkeley),
  Roger C. Bales (University of California, Merced)

Session 7: Network and Control

- Comparison of Overapproximation Methods for Stability Analysis
  of Networked Control Systems ............................................................................................................ 181
  W. P. M. H. Heemels, Nathan van de Wouw, Rob H. Gielen, M. C. F. Donkers
  (Eindhoven University of Technology),
  Laurentiu Hezel (Univ. Lille Nord de France), Sorin Olaru (SUPELEC),
  Mircea Lazar (Eindhoven University of Technology), Janai Daafouz (Nancy University),
  Silviu Niculescu (SUPELEC-CRNS)

- Distributed Kalman Filter Algorithms for Self-localization of Mobile Devices .................................. 191
  Anne-Kathrin Hess (Technische Universität Berlin), Anders Rantzer (Lund University)

- Convergence Results for Ant Routing Algorithms via Stochastic Approximation ............................. 201
  Puryashlok Purkayastha, John S. Baras (University of Maryland)

Session 8: Modelling and Analysis

- Monte-Carlo Techniques for Falsification of Temporal
  Properties of Non-Linear Hybrid Systems ......................................................................................... 211
  Truong Nghiem (University of Pennsylvania), Sriram Sankaranarayanan (University of Colorado),
  Georgios Fainekos (Arizona State University), Franjo Ivančić, Aarti Gupta (NEC Laboratories America),
  George J. Pappas (University of Pennsylvania)

- Automatic Invariant Generation for Hybrid Systems Using Ideal Fixed Points ............................... 221
  Sriram Sankaranarayanan (University of Colorado)

- Safe Compositional Network Sketches: Formal Framework ............................................................... 231
  Azer Bestavros, Assaf Kfoury, Andrei Lapets (Boston University), Michael J. Ocean (Endicott College)

Session 9: Verification of Stochastic Systems

- Bayesian Statistical Model Checking with Application to Stateflow/Simulink Verification ............... 243
  Paolo Zuliani, Andre Platzer, Edmund M. Clarke (Carnegie Mellon University)

- On the Connections Between PCTL and Dynamic Programming ............................................... 253
  Federico Ramponi, Debasis Chatterjee, Sean Summer, John Lygeros (ETH Zürich)

- Modeling and Verification of Stochastic Hybrid Systems Using HLOA:
  A Case Study on DNA Replication ..................................................................................................... 263
  Konstantinos Koutroumpas, John Lygeros (ETH Zürich)
Session 10: Switched Linear Systems

- A Generating Function Approach to the Stability of Discrete-Time Switched Linear Systems .................................................. 273
  Jianghai Hu (Purdue University), Jinglai Shen (University of Maryland at Baltimore County), Wei Zhang (University of California, Berkeley)

- Stabilization of Planar Switched Linear Systems Using Polar Coordinates .................................................. 283
  Andrew B. Godbole, S. Shankar Sastry (University of California, Berkeley)

Invited Talk

- Amir Pnueli and the Dawn of Hybrid Systems .................................................. 293
  Oded Maler (Verimag, Grenoble)

Author Index .................................................. 296
