Sabine Werkmeister

Permanent Deformation Behaviour of Unbound Granular Materials in Pavement Constructions

Plastisches Verformungsverhalten von Tragschichten ohne Bindeflüssigkeit in Straßenbepflanzungen

Dissertation
LIST OF CONTENTS

ABSTRACT I
KURZFASSUNG III
ACKNOWLEDGEMENTS V
NOTATIONS AND ABBREVIATIONS VI

CONTENTS XI

1 INTRODUCTION 1-1
1.1 Background of the Research 1-1
1.2 Objectives and Scope of the Research 1-2

2 LITERATURE REVIEW 2-1
2.1 Introduction 2-1
2.2 Deformation Behaviour of Unbound Granular Materials 2-1
2.2.1 Stresses in Unbound Granular Layers 2-1
2.2.2 Deformation Characteristics of Unbound Granular Materials 2-3
2.3 Factors affecting Permanent Strain Response 2-7
2.3.1 Introduction 2-7
2.3.2 Number of Load Cycles 2-7
2.3.3 Moisture Content 2-9
2.3.4 Stress History 2-11
2.3.5 Density 2-12
2.3.6 Grading 2-12
2.3.7 Physical Properties of Aggregate Particles 2-14
2.3.8 Stress Level 2-15
2.4 The Shakedown Concept and Pavement Design 2-16
2.4.1 Introduction 2-16
2.4.2 Modelling Permanent Strain with Respect to Number of Load Cycles 2-19
2.4.3 Modelling Permanent Strain using Shakedown Approach 2-20
2.4.4 Conclusions 2-25
3  TRIAXIAL TESTS  
3.1  Introduction  
3.2  Materials used in this Investigation  
3.3  Testing Equipment  
  3.3.1  Sample Preparation  
  3.3.2  Repeated Load Triaxial Apparatus  
  3.3.3  Principle of Measurement  

4  TEST RESULTS  
4.1  Introduction  
4.2  Permanent Deformation Behaviour  
  4.2.1  Range A - Plastic Shakedown Range  
  4.2.2  Range C - Incremental Collapse  
  4.2.3  Range B - Intermediate Response - Plastic Creep  
4.3  Resilient Deformation Behaviour  
4.4  Static Triaxial Tests  
4.5  Deformation Behaviour Model of Unbound Granular Materials  

5  SHAKEDOWN LIMIT CALCULATION  
5.1  Introduction  
5.2  Limit Ranges for the Deformation Behaviour of Unbound Granular Materials  
  5.3  Criteria for Shakedown Ranges  
    5.3.1  Criteria Range A-B  
    5.3.2  Criteria Range B-C  
5.4  Conclusions  

6  MODELING PERMANENT DEFORMATION BEHAVIOUR  
6.1  Introduction  
6.2  Micromechanical Processes  
  6.2.1  Micromechanical Processes in Range A  
  6.2.2  Micromechanical Processes in Range B  
  6.2.3  Micromechanical Processes in Range C  
6.3  Plastic DRESDEN-Model
List of Contents

7  PARAMETERS INFLUENCING DEFORMATION BEHAVIOR 7-1
7.1  Introduction 7-1
7.2  Effect of the Grading on the Permanent Deformation Behaviour 7-1
7.3  Effect of the Physical Properties of Aggregate Particles on Permanent
     Deformation Behaviour 7-5
7.4  Conclusions 7-10

8  PAVEMENT PERFORMANCE 8-1
8.1  Introduction 8-1
8.2  The Resilient Calculation 8-2
     8.2.1 Finite Element Program 8-2
     8.2.2 Constructions selected for Investigation 8-3
     8.2.3 Implementing the Material Behaviour 8-4
     8.2.4 Results of the Resilient Calculation 8-25
8.3  Calculation of the Permanent Strains 8-30
8.4  Design Chart 8-36

9  CONCLUSIONS 9-1
9.1  Introduction 9-1
9.2  Literature Review 9-2
9.3  Laboratory Experiments 9-3
9.4  Design Chart and Pavement Performance 9-5

10  RECOMMENDATIONS FOR FURTHER RESEARCH 10-1
