### What, Exactly, Will We Accomplish? xix

The One Reason Every CIO or IT Manager Should Read This xix
At Risk of Ruining the Ending . . . xix
Business Data xx

### Part I Building Blocks, Power, and Consolidation 1

#### Chapter 1 The Disk Drive: The Fundamental Building Block of Enterprise Storage 3

1.1 Using a Metrics-Based Approach to Get Past the Complexity 4
1.2 Metrics for the Basic Building Block: Hard Disk Drives and Solid State Devices 5
1.3 About HDD Capacity and Service Levels 12
1.4 Financial Responsibility and the Tradeoffs between Capacity, Form Factor, and Spin Speed 15
1.5 Demystifying Hard Disk Drive Performance 15
1.6 Hard Disk Drive Quick Guided Tour 17
  1.6.1 Hard Drive Spin Speeds and Latency 20
  1.6.2 Interface Speeds: SATA Speeds, SAS Speeds, FC Speeds 21
  1.6.3 HDD Caching 23
  1.6.4 HDD Queuing 24
  1.6.5 Drive Performance Summary 25
Chapter 2  Power and AC  
2.1 Powering Down Inactive Drives, or MAID  
2.2 Facilities and Power  
   2.2.1 Facilities: Air Conditioning  
2.3 Establishing a Baseline for Performance, Capacity, and Power  
2.4 Facilities Cooling Improvements Within Reach

Chapter 3  Storage Consolidation  
3.1 Cost of DAS versus SAN: Overprovisioning  
3.2 Cost of DAS versus SAN: Backup Efficiency  
3.3 Hot Data, Cool Data, and Consolidation, a Single-Tiered Systems Approach  
3.4 Consolidation for Noncritical (Tier 2) Applications  
3.5 More Silo System Avoidance  
   3.5.1 Corrective Action for Situations Where Silos Are Not Yet Deployed  
   3.5.2 Corrective Action for Situations Where the Silos are Already in Place  
3.6 Consolidation Conclusion

Chapter 4  Service Level Overview  
4.1 Service Level Agreements (SLAs)  
4.2 Reviewing SLAs with Business Unit Customers  
4.3 Delivering on SLA Commitments

Chapter 5  Uptime, Reliability, and SLAs  
5.1 SLA Uptime: RAID Levels  
5.2 SLA and Point in Time Copy: Avoiding the Backup Window Problem  
5.3 SLA Uptime: Failover  
5.4 SLA Cost and Billing  
5.5 Performance and SLAs

Chapter 6  Storage Tiering and SLAs  
6.1 Comparing Scenarios  
   6.1.1 Scenario 1: Single-Tier Baseline  
   6.1.2 Scenario 2: Two Tiers
6.1.3 Scenario 3: Two Tiers, Better Service Levels 82
6.1.4 Scenario 4: Two Tiers, Significantly Better Service 84
6.1.5 From Scenario to Reality 86

Chapter 7 Service Level Agreements and IT Bill-Back 89
  7.1 IT Bill-Back Example of SLA 90

Chapter 8 Demonstrating Delivery on SLA Service Levels 93
  8.1 Customer Feedback and Service Levels 93
  8.2 SLA Conclusion 95

Chapter 9 Planning for Growth and Storage Tiering 97
  9.1 Storage Growth, and SLA for Provisioning 98

Chapter 10 Wrap-Up: Projects Within Reach 101
  10.1 Improvement 1. Improve Efficiencies with Static Tiering 101
  10.2 Improvement 2. Improve Power and Air Conditioning 103
  10.3 Improvement 3. Consolidate and Reduce Server-Attached Storage 103
  10.4 Improvement 4. Better Backup—Replace Tape 104
  10.5 Improvement 5. Establish Tiered Storage and Service Level Agreements 104
  10.6 Improvement 6. Migrate Cool data onto to Tier 2, Release Tier 1 Resources for Critical Applications 105
  10.7 Improvement 7. IT Bill-Back 106
  10.8 Improvement 8. Track and Improve 106
  10.8 Conclusion 106

Part II Managing Aging Data and E-Mail Expenses 109

Chapter 11 Migration and Retiring Aging Systems 111
  11.1 File Migration Project Planning 113
    11.1.1 File Migration Plan, Discover, Test, QA, Provision, and Cut-Over 114
11.1.2 Aging Data and the Role of Near-Line Archive and Search 116
11.1.3 Block (Database, Email etc.) Application Data Migration 116
11.2 Migration Overview (Virtualized Storage) 118

Chapter 12  Shared Folders and Content Management 119
12.1 Content Management System Cost Analysis, Before and After 121

Chapter 13  Storage Strategies for E-Mail 123
13.1 E-Mail Quotas, PC Folders and PC Backup 123
13.2 E-Mail Hosting Providers 125
13.3 Checklist for E-Mail Project 125

Chapter 14  Spending Wisely on Performance 127
14.1 Establish Clear Performance Criteria (in SLA Terms) 127
14.2 The Yardsticks of Storage Performance 128
14.3 Resolving Performance Issues in Production Systems 129
14.3.1 Paging 129
14.3.2 I/O Size 130
14.3.3 Fragmentation 130
14.3.4 Individual Account Problems 131
14.3.5 Resource Contention 131
14.3.6 Time of Day 131
14.3.7 Storage Array Misbehavior 132
14.3.8 Storage Caching 132
14.3.9 Storage Rearrangement 134
14.3.10 Fibre Channel Zoning 134
14.3.11 Latency 135
14.4 Solid State Drives (SSDs) and Solid State Storage (SSS) 136
14.4.1 Where and How to Use SSDs 136
14.4.2 SSD Endurance, Life Cycle, and Warranty 142
14.4.3 Flash and RAM 143
Chapter 15 Performance and Backup 145

Chapter 16 The Right Tools for Reliability, Uptime, Disaster Recovery, and Archiving 151
  16.1 Server Problem (Direct Attached Storage) 151
  16.2 Server Problem (External SAN Storage) 152
  16.3 Drive Failure 152
  16.4 Accidental Data Deletion or Modification, or Virus 153
  16.5 Storage Array Controller Failure 153
  16.6 Cable Failure 154
  16.7 SAN Switch Problem 154
  16.8 Data Center Power Problem 155
  16.9 Data Center Air Conditioning Problem 156
  16.10 Data Center Interior Problem (Sprinklers) 157
  16.11 Data Center Act of Nature 157
  16.12 Spending Wisely on Reliability 158

Chapter 17 Reliability and Server Failover 161
  17.1 How Server Failover Works 161
  17.2 Load Balancing 169

Chapter 18 Reliability and Continuous Data Protection, Synchronous Replication 173

Chapter 19 Reliability and Near-Continuous Data Protection, Asynchronous Replication 175

Chapter 20 Reliability and Data Integrity (T10-DIF or T10-PI) 177

Chapter 21 Virtualization Overview: Focus on the Business Benefits 179
  21.1 Virtual Machine Sprawl 181
  21.2 Aligned Server Virtualization and Storage 181

Chapter 22 Storage Virtualization 183
  22.1 Virtualized Storage and Shared Storage for Virtualized Servers 183
  22.2 Thin Provisioning 185
  22.3 Storage Provisioning Before and After 186
27.7 Improvement 6. Use Server Failover and Spend Wisely on Storage Reliability. 214
27.8 Improvement 7. Create E-Mail Quotas, PC Mail Folders, and PC Network Backup. 214
27.9 Improvement 8. Replace Shared Folders with a Content Management System. 214
27.10 Improvement 9. Using Manual Storage Tiers, Move Aging Data from Tier 1 to Tier 2. 215
27.11 Improvement 10. Pilot Automated Storage Tiers. 215
27.12 Improvement 11. Use a Virtual Desktop Infrastructure. 216
27.13 Improvement 12. Establish IT Infrastructure Standardization. 216

Part II Conclusions 217

Part III Managed Hosting and Cloud 219

Chapter 28 Managed Hosting and Cloud Computing 221

Chapter 29 The Business Driving Managed Hosting: What It Means to You 227
29.1 Why Managed Hosting? 230
29.2 Data Center Definition(s) According to TIA-942 231
29.3 Working Around the Overfull Data Center 233
29.4 The Dynamic Data Center and Cash Flow 234
29.5 Is Managed Hosting Proven and Viable? 235

Chapter 30 Managed Hosting Vetting Process 237
30.1 Hosting Provider Categories 237
  30.1.1 Services-Centric Hosting 237
  30.1.2 Dedicated or Shared Hosting 238
  30.1.3 Facility-Centric Hosting (Includes Interconnection and Co-Location) 238
  30.1.4 RFQ, Selection, SLA and Risk Management 238
30.2 Implementing SLAs 242
30.3 Managing the Risk 243
30.4 Hosted Management Migration Project Planning and Execution 245
30.5 Managed Hosting Simple Cost Analysis: Before and After 246

Chapter 31 Why Cloud is Relevant 249
   31.1 Origins and Blueprint of Cloud Computing 250
   31.2 Cloud and the CIO 250
      31.2.1 Security 251
      31.2.2 Availability 252
      31.2.3 Performance 252
      31.2.4 Cost 253
      31.2.5 Standards 253
      31.2.6 Refining the Answers 254
   31.3 Traditional IT versus Cloud Approaches 254

Chapter 32 Implementing Cloud Storage in Your Operation 257
   32.1 Cloud-Based E-Mail 258
   32.2 Cloud-Based Content Management and Collaboration 259

Chapter 33 Hybrid Cloud 263
   33.1 Steps to Prepare for Cloud Technologies 263
      33.1.1 Be Selective on Cloud Migration 264
      33.1.2 Have Data Management Retention Policies 264
      33.1.3 Have a Migration Process 264
   33.2 Examining Key Norms of Traditional IT versus Cloud Approaches 265
   33.3 Cloud Performance 267

Chapter 34 Cloud Spectrum of Options 269
   34.1 Handling Objections and Resistance to Change 270
   34.2 Trends in Public Cloud that Will Materialize in IT and Private Cloud 270
Chapter 35  End Game and Hardware Roadmap to Leverage the Cloud  273

Chapter 36  Strategy and Execution  277

Chapter 37  Constructing a Roadmap  283
   37.1 Managing a Roadmap  288
   37.2 Roadmap Execution, Package Phase Definition and Approvals  289

Chapter 38  Risk Management  295

Chapter 39  Part III Wrap-Up: Projects Within Reach  297
   39.1 Improvement 1. Find the Right Managed Hosting Provider for Your Business  297
   39.2 Improvement 2. Compare Managed Hosting Service Level Agreements and Managed Hosting Risk Management  297
   39.3 Improvement 3. Find the Right Cloud Storage Provider  298
   39.4 Improvement 4. Implement Cloud-Based E-mail  298
   39.5 Improvement 5. Implement Cloud-Based Content Management and Collaboration  298
   39.6 Improvement 6. Implement a Hybrid Cloud Project  298
   39.7 Improvement 7. Create a Storage Strategy and Execution Plan that Includes a ZBB, Roadmap(s), and Supporting Phase Gate Project Management/Approval Process  299

Part III Conclusion  300

Appendix A  Storage Protocol Basics  301

Appendix B  Project Management  305

Appendix C  People, Process, Technology  309
   C.1 Push Decisions into the Hands of Those Most Capable  309
