NEW DEVELOPMENTS IN SIMULATION METHODS AND SOFTWARE FOR ENGINEERING APPLICATIONS

SAFETY ENGINEERING, RISK ANALYSIS AND RELIABILITY METHODS

TRANSPORTATION SYSTEMS

presented at
ASME 2009 INTERNATIONAL MECHANICAL ENGINEERING CONGRESS AND EXPOSITION
NOVEMBER 13-19, 2009
LAKE BUENA VISTA, FLORIDA USA
CONTENTS

NEW DEVELOPMENTS IN SIMULATION METHODS AND SOFTWARE FOR ENGINEERING APPLICATIONS

GENERAL
IMECE2009-10108 ................................................................. 1
Kriging Modeling for Engine Mount Optimization in Motorcycles
Sudhir Kaul and Anoop K. Dhingra

IMECE2009-10161 ................................................................. 13
ANN for Tribological Applications
Tanzim Nasir, Nbhay Salih, Tze Hui Liew, Chin Chee Wen, and B. F. Yousif

IMECE2009-10277 ................................................................. 17
On the Construction and Use of Surrogate Models for the Dynamic Analysis of Multibody Systems
H. Ansari Ardeh, M. Tupy, and D. Negrut

IMECE2009-10391 ................................................................. 27
An Algorithm for Reducing the Size of Finite Element Closed-Form Source Code Files
Sara McCaslin and Kent Lawrence

IMECE2009-10503 ................................................................. 35
Mathematical Models for Human Pilot Maneuvers in Aircraft Flight Simulation
Yan Zhang and Seamus McGovern

IMECE2009-10806 ................................................................. 41
Exploration of a Potential-Flow-Based Compact Model of Air-Flow Transport in Data Centers
Michael M. Toulouse, Guislain Doljac, Van P. Carey, and Cullen Bash

IMECE2009-10961 ................................................................. 51
A New Lattice Boltzmann Model for Phase Transition Process
Longjian Li, Jianbang Zeng, Quan Liao, and Wenzhi Cui

IMECE2009-11926 ................................................................. 59
Modeling the Effect of Fluid-Structure Interaction on the Impact Dynamics of Pressurized Tank Cars
Hailing Yu, Yim H. Tang, Jeffrey E. Gordon, and David Y. Jeong

IMECE2009-12205 ................................................................. 71
Fatigue Analysis of Antiroll Bar for Periodic and Random Inputs Using Various Theories and Introducing a New Method
Mohammad Azadi and Farshad Zahedi

IMECE2009-12881 ................................................................. 77
Hybrid Method of Engineering Analysis: Combining Meshfree Method With Distance Fields and Collocation Technique
Igor Tsukanov and Sudhir R. Posireddy
An Unstructured Finite Volume Method for Incompressible Flows With Complex Immersed Boundaries
Lin Sun, Sanjay R. Mathur, and Jayathi Y. Murthy

A Combined Approximation Based MATLAB Code for Dynamic Re-Analysis of Aerospace Structures
Hesham A. Afifi, Efstratios Nikolaidis, Emily K. Afifi, and Sathya N. Gangadharan

Research and Application of Virtual Reality and Simulation Techniques Corporately to Tower Crane
Xian-yi Meng

Integrated Approach for Life Prediction of Complex Thermal Systems
O. M. Al-Habahbeh, D. K. Aidun, P. Marzocca, and H. Lee

Masaaki Tamagawa

Implementation of a Semi-Implicit Pressure-Based Multigrid Fluid Flow Algorithm on a Graphics Processing Unit
Aaron F. Shinn and S. P. Vanka

Revisiting Boundary Scattering in Thermal Transport at the Nanometer Scale
Sanjiv Sinha

Nanoscale Heat Transfer and Phase Transformation Surrounding Intensely Heated Nanoparticles
Pawel Kebinski, Samy Merabia, Jean-Louis Barrat, Sergei Shenogin, and David G. Cahil

A Numerical Method for Coupling Nano-Scale Molecular Binding With Mesoscale Cellular Deformation
Vijay K. Gupta and Charles D. Eggleton
SYMPOSIUM ON NUMERICAL METHODS IN VIBRATION AND ACOUSTICS
IMECE2009-10165 .................................................................................................................. 157
Fast Multipole Boundary Element Method for 3-D Full- and Half-Space Acoustic Wave Problems
Yijun Liu and Milind Bapat

IMECE2009-10289 .................................................................................................................. 163
Periodic Solutions for Multi-Degree-of-Freedom Nonlinear Dynamical System Solved by the Extended Homotopy Analysis Method
Youhua Qian, Wei Zhang, and Shuping Chen

IMECE2009-10698 .................................................................................................................. 169
Application of the Fast Multipole Boundary Element Method to Analysis of Sound Fields in Absorbing Materials
Xiaobing Cui and Zhenlin Ji

IMECE2009-11051 .................................................................................................................. 177
Numerical Calculation on Vortex-Induced Vibration of the Circular Cylinder Using Low Reynolds Model in Hybrid Method
Xingwei Zhang and Chaoying Zhou

IMECE2009-11351 .................................................................................................................. 185
On the Use of Meshless Methods in Acoustic Simulations
Philipp Hahn and Dan Negrut

SAFETY ENGINEERING, RISK ANALYSIS AND RELIABILITY METHODS

PRODUCT AND PROCESS SAFETY
IMECE2009-10071 .................................................................................................................. 201
Analysis and Testing of Freezing Phenomena in Plastic Piping Systems
Dale B. Edwards, Kenneth M. Smith, Jr., Donald E. Duvall, and Joseph F. Grzetic

IMECE2009-10427 .................................................................................................................. 207
Seven Modules Risk Assessment System of Urban Gas Pipeline Network
Qiuju You, Wei Zhu, and Yongsheng Men

IMECE2009-12148 .................................................................................................................. 213
Prevention Through Design: An Idea Whose Time Has Come
John S. Morse and Stephen A. Batzer

IMECE2009-12668 .................................................................................................................. 223
Comparing the Predictive Ability of T-Method and Cobb-Douglas Production Function for Warranty Data
Protyusha DasNeogi, Elizabeth Cudney, Akim Adekpedjou, and Rodney Kestle

IMECE2009-12799 .................................................................................................................. 229
Application of Business Rules in Design Processes to Tackle Uncertainty in Product Development
Daniel Spieß and Reiner Anderl
RELIABILITY METHODS AND APPLICATIONS

IMECE2009-10584 ................................................................. 239
Optimization of Jacket Type Offshore-Tower Under Uncertainties
  V. Togan, H. Karadeniz, and A. T. Daloglu

IMECE2009-10592 ................................................................. 247
Research on Reliability Design Theory and Methods of CNC System
  Taiyong Wang, Qingjian Liu, Yunfeng Wang, Jianhai Yue, and Dafeng Jin

IMECE2009-10686 ................................................................. 255
Seismic Reliability Analysis of Structural Systems
  Paata Rekvava

IMECE2009-11095 ................................................................. 263
Stochastic Response Surface Method Based on Weighted Regression and Its Application to
Fatigue Reliability Analysis of Crankshaft
  Yi Fei Sun, Hao Bo Qiu, Liang Gao, Ke Lin, and Xue Zheng Chu

IMECE2009-12826 ................................................................. 269
Optimization of Component Reliability Allocation in a Complex Repairable System Using a
System Total Reliability Risk Metric
  Ward O. Baun, III

IMECE2009-13191 ................................................................. 277
Experimental Assessment of Fatigue Reliability for High-Pressure Plunger Pumps
  Francesco W. Panella and Giulio Reina

IMECE2009-13342 ................................................................. 283
Integrated Physics-Based Approach for the Reliability Prediction of Thermal Systems
  O. M. Al-Habahbeh, D. K. Aidun, P. Marzocca, and H. Lee

RISK ANALYSIS

IMECE2009-10390 ................................................................. 297
Rear Seated Child Injury Risk Experimental Measures Related to Vehicle Front Seat
Performance in Rear Impacts
  Kenneth J. Saczalski, Mark C. Pozzi, and Joseph Lawson Burton

IMECE2009-10872 ................................................................. 313
Railroad Tank Cars During Accidents
  D. Y. Jeong

IMECE2009-11831 ................................................................. 323
A Modern Approach to Bayesian Inference for Risk and Reliability Analysis
  Curtis L. Smith, Dana L. Kelly, and Kurt G. Vedros

IMECE2009-12804 ................................................................. 331
Cost and Schedule Estimate: Risk Analysis for Transportation Infrastructures
  Ovidiu S. Cretu
The Application of the Bayesian Networks in the Human Reliability Analysis
Marcelo R. Martins and Marcos C. Maturana

SAFETY ENGINEERING
Water Sport Tow Ropes
Ralph L. Barnett and Adam A. E. Ziemba

Slipping on Concrete: A Case Study
Ralph L. Barnett, Adam A. E. Ziemba, and Theodore Liber

Automotive Lifts: Unrestrained v. Restrained Swing Arms
Ralph L. Barnett and John B. Glauber

Safety Analysis and Child Testing of Residential Windows
Dennis B. Brickman and Joseph F. Grzetic

Riding Mower Injury Prevention (An Alternative Design for No-Mow-In-Reverse)
Christopher W. Ferrone, Julie A. Przybyla, and Matthew T. Orseske

Fire, Cause and Origin of Heavy Vehicles (Mechanical and Forensic Methods)
Christopher W. Ferrone

Stepladder Spreader Bar Structural Integrity and the Impact on Accidents
Michael P. Van Bree, Erick H. Knox, Kenneth M. Smith, Jr., and Joseph T. Eganhouse

Structural Stepladder Failure: Analysis of Root Cause
Erick H. Knox, Michael P. Van Bree, Matthew T. Kenner, and John A. Wilkinson

Pendulum Animal Impact Testing
Stephen Forrest, John Paul Sodusta, Brian Herbst, and Steven E. Meyer

TRANSPORTATION SYSTEMS
CRASHWORTHINESS IN TRANSPORTATION SYSTEMS
Modeling the Impact Response of HDPE Fuel Tank Material
Xinran Xiao and Vinayshankar Virupaksha
A Study of Mesh-Independent Spot Weld Modeling for Impact Simulation of Automotive Components

Srinivasan Vimalanathan and Lonny Thompson

Chest Deflection vs. Chest Acceleration as Injury Indicator in Front Impact Simulations Using Full Human Body Finite Element Model

Raed E. El-Jawahri, Jesse S. Ruan, Stephen W. Rouhana, and Saeed D. Barbat

Brain Deformation in Linear Head Impact

Kaveh Laksari and Kurosh Darvish

New Shallow Foundation Security Barriers for Urban Applications: FEA and Certified Actual Crash Test

Tarek A. Omar and Nabih E. Bedewi

Investigating Mass Scaling in Vehicle Crashworthiness

John D. Reid

Heavy Truck Roll Cage Effectiveness

Stephen A. Batzer, Bruce E. Enz, G. Grant Herndon, Chandrashekar K. Thorbole, Robert Hooker, T. Kim Parnell, and Mariusz Ziejewski

Motor Coach/Bus Crashworthiness Systems: Occupant Retention

Stephen A. Batzer, David Beltran, G. Grant Herndon, Chandrashekar K. Thorbole, and Mariusz Zniejewski

Shock Optimization in a Military Vehicle With Internal Space Frame

Jagadeep Thota, Mohamed B. Trabia, and Brendan J. O'Toole

A Theoretical Study of Submarining Tendency of a Hybrid III 5th Percenttile Female Dummy

Liang Tang and Qing Zhou

A Finite Element Parametric Study of Femur Fracture Force in Out-of-Position Seating Positions Fracture Femoral Forces to Abbreviated Injury Scale Level 2+ and 3+

Chiara Silvestri and Malcolm H. Ray

Deformation and Energy Absorption Characteristics of Thin-Walled Structures

Ahmed Elmarakbi and Niki Fielding

Application of Optimization Methodology on Vehicular Crash Reconstruction

Fengjiao Guan, Aditya Belwadi, Xu Han, and King H. Yang
Performance Evaluation of a Portable Restraint for a Motor Coach Occupant in a Rollover Accident

Chandrashekhar K. Thorbole, Stephen A. Batzer, and David A. Renfroe

Vehicle Rollover Detection Index

Nikolai Moshchuk and Shih-Ken Chen

CFD Analysis of Drag Reduction for a Generic SUV

Pramod Nari Krishnani and Dongmei Zhou

Inflatable Truck Roof Deicing System

Tyler Ustrzycki, Christy Fernando, Michael Ligori, and Nisha Papneja

A Methodology of an Automotive Engine Cooling Using a Phase Change Material

Kibum Kim, Kyung-wook Choi, Ki-hyung Lee, and Kwan-soo Lee

Hybrid Power Systems for Construction Machinery: Aspects of System Design and Operability of Wheel Loaders

Reno Filla

A Cam-Based Electro-Hydraulic Variable Valve Timing System for Pneumatic Hybrid Engines

Mohammad Pournazeri, Amir Fazeli, and Amir Khajepour

Nomographs for Kinematics, Statics and Power Flow Analysis of Epicyclic Gear Trains

Essam L. Esmail and Hamed A. Hussen

Topology and Free Size Optimization With Manufacturing Constraints for Light Weight Die Cast Automotive Backrest Frame

Sreeram Polavarapu, Lonny L. Thompson, and Mica Grujicic

Intelligent Judgment System for Vehicle-Overtaking by Motion Detection in Subsequent Images

Yu-Wen Shou

The Influence of a Two-Stage Valve Stem on an SFEMV System

H. C. Ho, W. S. Chiang, H. P. Chen, and D. M. Tsay
