Digital Signal Processing (II)

Signal Detection Technology Research of MIMO-OFDM System..................................................3031
Zhang Xiuyan , Su Yajie , and Tao Guobin

Signal Process of Light Emission Patterns in Argon/Air Dielectric Barrier Discharge................................3035
Jia Pengying, Li Xuechen, Tian Xiaodong, Zhao Na, and Liu Zhihui

Simulation of the Light Signal Scattered by Brownian Colloidal Particles......................................3039
Wang Yajing, Shen Jin, Liu Wei, and Dou Zhenhai.

Study on Identification Method of Tool Wear Based on Feature Fusion and Least Squares Support Vector Machine.................................................................3044
Guan Shan and Wang Long-Shan

Study on Prediction of Operational Data of Turbine in TRT System Based on Artificial Neural Network.................................................................3049
Sun Tieqiang, Zhang Lei, and Nie Zhaohui.

Study on the Identification of Bridge Aerodynamic Derivatives with Poly Reference Complex Exponent (PRCE) Method.................................................................3053
Zhuanyun Yang

The Design of Parallelized BCH Codec.................................................................3057
Wang Chenxu, Gao Yuhong, Han Liang, and Wang Jinxiang

The Identification of Internal and External Faults for ±800kV UHVDC Transmission Line based on S-transform of the Polarity Wave.................................................................3060
Shu Hongchun, Tian Xincui, and Dai Yuetao
Signal Representation and Transforms

An Efficient Transient Audio Coding Algorithm based on DCT and Matching Pursuit .......................................................... 3082
Wang Jing, He Hailong, Ning Ning, and Kuang Jingming

Capacity Dependent Estimations by Integral Operator Techniques ................................................................. 3086
Guo Qin, Zhu Yukui, and Sun Hongwei

Direct computation of length-N DHT from three adjacent length-N/3 DHT coefficients .................................................. 3090
Wu Jiasong, Wang Lu, Shu Huazhong, and Senhadji Lotfi

Efficient Lifting Based CDF9/7 Wavelet Transform Using Fixed Point ................................................................. 3094
Zhong Xiangyi, Jiang Hongxu, Cao Haiheng, and Yang Rui

Forced Vibration Method for Identification of Flutter Derivatives of Bridge Section Model ........................................ 3098
Zhuanyun Yang

Improved Hilbert-Huang Transform and its Application in Acoustic Vector Signal Processing ..................................... 3103
Zhu Zheng, Wang Yi-lin, and Cai Ping

Method of Photoelectric Detection and Signal Processing for Measuring the Overprint Deviation of Printing Press ................. 3107
Chen Changying, Fu Qian, Sun Yuanyuan, Luo Hongtu, Hong Yue, Deng Wei, and Liu Xiaochong

Simulation of Nonstationary Processes Based on Orthogonal Hilbert-Huang Transform ................................................. 3111
Hu Canyang

Statistical Signal Processing

A Composite Fitting Algorithm Based on Sine Function and a Polynomial ................................................................. 3116
Wang Dongxing, Zhao ChunFeng, Chen Su, and Sun Xingpeng

A Novel Proposal Distribution for Particle Filter ........................................................................................................ 3120
Ju Bing, Zhang Zenghui, and Zhu Jubo

An Improved Fast Viterbi Algorithm for Track-Before-Detect .................................................................................... 3125
Zhang Ning, Hao Song, and Li Yang
Application of Random Forest to Stellar Spectral Classification .......................................................... 3129
  Yi Zhenping and Pan Jingchang

Clustering Methods based on Rough Estimate of Cluster Core ................................................................ 3133
  Sun Ying, Wang Yan, Du Wei, Cao Zhongbo, Zhou Chunbao, Zeng Yingying, Zhang Hanyuan,
  and Zhou Chunguang

FIGARCH Model on Chinese Securities Market-Based on the Genetic Algorithms ........................................ 3137
  Lin Yong and Wu Lei

Mean, Median and Tri-Mean Based Statistical Detection Methods for Differential Gene Expression in
Microarray Data ......................................................................................................................................... 3142
  Ji Zhaohua, Wang Yao, Wu Chunguo, Wu Xiaozhou, Xing Chong, and Liang Yanchun

Multirange fractal approach to analyze the microstructure of Sn melt ....................................................... 3147
  Zhou Yongzhi, Geng Haoran, Li Mei, Yang Zhongxi, and Wang Zhiming

Noisy Blind Source Separation by Nonlinear Autocorrelation .................................................................... 3152
  Shi Zhenwei, Tan Xueyan, Jiang Zhiguo, Zhang Hongjuan, and Guo Chonghui

On New Effective Integrated PI Algorithm to Automatic Processing of Space-Time Images in Earthquake
Activities ...................................................................................................................................................... 3157
  Anxu Wu

Propagation Features of Wave-packet Signal of Interdecadal Change of the East Asian Summer
Monsoon ...................................................................................................................................................... 3162
  Xiao Tiangui, Sun Zhaobo, Ming Jingzhong, and Chen Weibin

Speaker Verification based on SVDD ........................................................................................................... 3168
  Zhou Yuhuan, Gong Yong, Wang Jinming, Sun Jian, Zhang Xiongwei, and Zhu Tao

Statistical Signal Analysis in Lp Space .......................................................................................................... 3173
  Flalie Dragos and Ichim Mihaela

The Classification Model of the Process Based on Uncertain Distance ....................................................... 3178
  Yu Xuedou

The Solving Strategy for the Real-World Vehicle Routing Problem ............................................................. 3182
  CE Fu and Hui Wang

Filter Design

Application of Comb Filter in Fault Early Diagnosis of Rolling Bearing ..................................................... 3186
  Li Baoliang, Wang Tingyu, and Yuan Yu

Cooperative Navigation for Multi-UUV Using Relative Observations ....................................................... 3191
  Xie Pan, Kang Fengju, and Wang Yankai

Implementation of Harmonic IIR Notch Filter with the TMS320C55x ....................................................... 3195
  Guan Xiaochun, Chen Xiaoqin, and Wu Guichu
xvii
Multi-Rate and Wavelet Signal Processing

Duality Principles in Banach Spaces..........................................................3212
   Xiao Xuemei, Wang Xincun, and Zhu Yucan

Fault Phase Selection and Distance Location Based on ANN and S-transform for Transmission Line in Triangle Network..........................................................3217
   Shu Hongchun, Wu Qianjin, Wang Xu, and Tian Xincui

Lifting Scheme Wavelet Transform Based Damage Detection Of Composite Wingbox Structures........3220
   Jiang Jinshou, Chen Huanguo, Li Jianmin, Chen Wenhua, and Zhang Leitao

Orthogonal Two-direction Compactly Supported Wavelet Packets........................................3224
   Li Lan, Li Na, and Yang Huae

Restoring of Single Ion-channel Current Based on Wavelet Transform........................................3229
   huang zhongchao, tan qiulin, and gu liqun

SAR Interference Signal Feature Vector Extraction And Simulation Based On Wavelet Packet Analysis..........................................................3234
   Qu Wei, JIA Xin, LIU Shuqian, and Wu Yanhong

Signal Denoising Based on Non-local Similarity and Wavelet Transform........................................3239
   Sun Weifeng and Han Min

Study on De-noising of Near Infrared Spectrum for Wood Based on Wavelet Transform Modulus Maximum..........................................................3242
   Yang Ting, Wang Jie, and Xu Bin

The Waveform Similarity Measurement Study of Seeker-eCabin Based on Wavelet Analysis........3247
   Pan Zhuojin, Wu Shijie, and Yang Hua

Signal Coding Techniques

A FAST MODE DECISION ALGORITHM FOR MULTIVIEW VIDEO CODING................3252
   Ai Mingjing and Wang Jingke

A Novel Low Complexity LDPC Encoder Based On RU Algorithm With Dynamic Programming........3258
   Sun Xiangran, Zeng Zhibin, and Yang Zhanxin

Coding via Random Convolution..........................................................3263
   Xiang Yin and Li Fang
Comparative Analysis of CTCSS Decoding Algorithms ......................................................... 3268
   Liu Xiaowei, Zhao Yi, and Song Feihao.

Discussion on Method of Construction of Big Capacity OCDMA Address Code ...................... 3272
   Li Xiaobin, Peng Juan, and Huang Huanbin

On a Family of Permutation Polynomials over Finite Fields ............................................. 3276
   Jiang Jian-jun

Parallel Transposing and Communication Strategies for FFT on Cluster of SMP Architectures With Multicore Processors ............................................................... 3280
   Yuan Jie, Wu Jianping, and Wang Zhenghua

Adaptive Signal Processing

A New Adaptive Filtering Algorithm Based on Discrete Wavelet Transforms ........................ 3284
   Feng Cunqian, Zhang Linrang, and Hui Xiaoping

A Novel Adaptive Harmonic Detecting Algorithm Applied To Active Power Filters ................ 3287
   Yang Jianning, Guan Jiajun, Ning Yanning, and Liu Qianqian

A Novel Variable Step Size LMS Algorithm Based on Decorrelation .................................. 3291
   Li Jianhua and Li Jing

Adaptive Blind Equalization in Impulsive Noise Environments ........................................ 3295
   Li Sen, Lin Bin, and Qiu Tian-shuang

Adaptive-Adaptive Beamforming Algorithm of Planar Array Based On One-dimensional Auxiliary Beam .......................................................... 3300
   Li Rongfeng, Rao Can, Dai Lingyan, and Zhao Shifeng

An Integrated Direct Data Domain Beamforming Algorithm .............................................. 3304
   Xing Gao-xiang and Cai Zhi-ming

Analysis and Modification to the Method of Bistatic Clutter Range Dependence Mitigation ........ 3308
   Li Yingchun and Li Jingwen

Application of Adaptive Structure Element for Generalized Morphological Filtering in Vibration Signal De-noising ................................................................. 3313
   Zhang Wenbin, Wang Hongjun, Teng Ruijing, and Xu Shaokun

Beamforming for Rejection of Co-Channels Interference in an OFDM System ...................... 3318
   Md. Rajibur Rahaman Khan and Tuzukov Vyacheslav

Gear Fault Detection and Diagnosis Based on Hilbert-Huang Transform ................................ 3323
   Han Liru

Research on Tracking Control Method for Chaotic Signal with Random Perturbations ............ 3327
   Li Xiuchun, Gu Jianhua, Wang Yunlan, Zhao Tianhai, Hou Zhengxiong, and Wang Tao
Spectral Analysis

A New Method for Identification of Zymic Pu-er Tea Based on Fourier Transform Infrared Spectroscopy .......................................................... 3332
 Li Xiaowei, Zhang Yanwei, Zhang Rongxiang, Zhao Xiaohui, and Zhang Lianshui

Analysis of Derivative Techniques for Hyperspectral Signal of Photosynthetic Pigments in Tall Fescue ......................................................... 3336
 Yang Feng, Qian Yurong, Wu Xiaoling, and Li Jianlong

Anti-leakage NDFT and Its Application in Data Reconstruction .......................................................... 3340
 Liu Baotong

Clustering Analysis for Parted Band Based on Infrared Spectra of Tea .................................................................................................... 3345
 Zhang Rongxiang, Zhang Yanwei, Zhao Xiaohui, Li Guang, Zhang Jianfei, and Li Xiaowei

Combination of visible and Short-wave Near infrared Spectroscopy and Chemometrics for Determination of Harvest Time of laver ........................................................................................................ 3350
 Chen Xiaojing, Xu Meng, Cai Qibo, and Hu Xuming

Content Measurement of Textile Mixture by Near Infrared Spectroscopy Based on BP Neural Network ........................................................................ 3354
 Liu Li, Yan Li, Xie Yaocheng, and Xia Ge

Exploratory Analysis of UV-Vis Absorption Spectra .......................................................................................... 3359
 Smith W.A. and Lam K.P

Information Extraction from Canopy Spectral Feature of Comnyza Canadensis (L.) Cronq. ................ 3364
 ZHOU Guangzhu, LI Yinming, CHEN Mingquan, and ZHANG Kun

Non-destructive Testing of Wood Composites based on Virtual Instrument .......................................................................................... 3368
 Zhu Xiao-dong, Cao Jun, Wang Feng-hu, and Liu Yu

QUADRATURE METHOD AND EXTRAPOLATION FOR SOLVING A CLASS OF ELASTIC BOUNDARY VALUE PROBLEMS .............................................. 3372
 cheng pan, huang jin, and zeng guang

Random Sequence Processing Under The Sampling Distance Distribution Influence ....................... 3377
 Zhang Jie and Lin Jianhui

Simultaneous Measurement of Soluble Solid Content, PH, Firmness and Density of 'Dangshan'Pear Using FT-NIR Spectrometry .................. 3380
 yang lei, gong hongju, and chen kunjie

Time-Frequency Signal Analysis

A Method to Estimate Vortex Shedding Frequency in Turbulence ......................................................... 3386
 Wang Li, Wang Yuan, and Li Zhiqiang

A New Processing Method for the End Effect Problem of Empirical Mode Decomposition ........................................................... 3391
 Quan Haiyan, Shi Xinling, and Liu Zengli
Analysis of the Time-frequency Characteristics of Internal Combustion Engine Vibration Signal based on Adaptive Generalized S Transform .................................................................................. 3395
Hongmei Xu, Shengfa Yuan, and Li Zong

Analysis of the Time-frequency Characteristics of Internal Combustion Engine Vibration Signal based on Hilbert-Huang Transform ........................................................................... 3400
Hongmei Xu, Shengfa Yuan, and Li Zong

Bearing Fault Detection Based on Order Bispectrum ........................................................................ 3405
Han Liru

Criteria on Boundedness in Terms of Two Measures for Dynamic Systems ........................................... 3409
Chen Weisong, Han Zhenlai, Sui Meizhen, and Zhang Guangrong

Ensemble Empirical Mode Decomposition and Hilbert-Huang Transform Applied to Bearing Fault Diagnosis .................................................................................................................. 3413
Li Hui, Wang Yucai, and Ma Yanfang

Fractional order Hyperjerk systems ........................................................................................................ 3418
Yanzhi Wang and Chunrui Zhang

Identification of Structural Vector Autoregressive Model Based on Time Series Chain Graphs ............ 3423
Wei Yuesong, Tian Zheng, Chen Zhanshou, and Leng Chengcai

Instantaneous Frequency based Spectral Analysis of Nuclear Magnetic Spectroscopy Data for Metabolomics ............................................................................................................. 3428
Aboutanios Elias, Kopsinis Yannis, and Rubtsov Denis

Motion Stability Analysis of Vehicle with Four Wheel Steering System Considering Tire Nonlinearity 3433
Yang Guoquan and Zhao Youqun

Prediction of Bed Variation during a Flood by Distorted Model Experiments with a Movable Bed 3438
Bing-qian Wei, Hong-yun Xun, Rong-ge Xiao, and Cheng-ya Xiao

Research On Time-Frequency Analysis Of Steel Guide Dynamic Test Signals Based On Laplace Wavelet ..................................................................................................................... 3443
Jiang Yuqiang, Xiao Xingming, and Li Zhanfang

Scale and Phase Characteristics of Temperature Series in China ............................................................. 3448
Gong Zhiqiang, Feng Guolin, and Wang Xiaojuan

Speech signal reconstruction based on the symmetric tight wavelet frame decomposition 3453
bousselmi souhir and ouni kais

Study on The Fault Diagnosis Based on Wavelet Packet and Support Vector Machine 3457
Wang Shengchun, Zhang Qing, Jin Tonghong, and Shijun

Terahertz Time-resolved Spectroscopy with Wavelet-transform ................................................................ 3462
Deng Yuqiang, Sun Qing, Liu Feng, Wang Changlei, and Xing Qirong

Using Uniform-Design Genetic Expression Programming for Chaotic Time Series Prediction 3465
Chen Yunliang, Huang Jianzhong, Xie Changsheng, and Yang Juan

xxi
Wavelet Transform of Geophysical Well Logging Signal and Its Application to Sequence Division ........ 3470
--- Liu Hui and Jiang Zaixing ---

Speech and Language Processing (I)

A Kepstrum Based Approach for Enhancement of Dysarthric Speech ........................................ 3474
--- V Lalitha, P Prema, and Mathew Lazar ---

A Multi-stream Speech Recognition System Based on The Estimation of Stream Weights .................. 3479
--- Guo Hongyu, Chen Qinghai, Huang Dongmei, and Zhao Xiaojun ---

A Novel Post-Processing Method for Reducing Audio Artifacts ................................................... 3483
--- Shen Zhenqian, Miao Changyun, Li Hongqiang, and Li Xianguo ---

Acoustic Analyses of Whispered Mandarin ..................................................................................... 3486
--- Gang Lv and Heming Zhao ---

An Algorithm for Chinese Voice Conversion Based on Phonetic Gaussian Mixture Model ............... 3490
--- Li Yanping, Zhang Linghua, and Ding Hui ---

An Improved Non-intrusive Objective Speech Quality Evaluation based on FGMM and FNN ............ 3495
--- Wang Jing, Zhang Ying, Song Yuling, Zhao Shenghui, and Kuang Jingming ---

Analysing Vocal Tract Area Function while uttering Stops (t, t') in MSA Arabic ............................... 3500
--- Majed Khalf Almanjoomi, and Ajami Alotaibi Yousef ---

Automatic Recognition of Speech Emotion Using Shuffled Frog Leaping Algorithm ......................... 3505
--- Yu Hua, Huang Chengwei, Jin Yun, and Zhao Li ---

Construct a naturalistic 3D avatar with live help interfaces based on multi-layered representation ....... 3509
--- Wang Zheng and Xu Bo ---

Discrete Wavelet Transform for Automatic Speaker Recognition .................................................. 3514
--- Pavel Král ---

A Fundamental Frequency Tracking and Note Segmentation Algorithm tailored for Karaoke Autoscoring ....................................................................................................................... 3519
--- Dixi Li, Shiwei Tang, Xiaoxue Han, Feng Yu, and Li Zhao ---

Phonetic Investigation of MSA Arabic Stops (tt, dd) ...................................................................... 3524
--- Sulaiman S. AlDahri and Yousef Ajami Alotaibi ---

Speech Visualization Research Based on Combined Feature and Neural Network ......................... 3528
--- Wang Jian, Han Zhiyan, and Lun Shuxian ---
