# 7 Strong Product

7.1 Basic Properties and $S$-Thin Graphs .......................... 79
7.2 Cliques and the Extraction of Complete Factors .................. 81
7.3 Unique Prime Factorization for Connected Graphs ................. 83
7.4 Automorphisms ................................................. 86

# 8 Direct Product

8.1 Nonuniqueness of Prime Factorization ........................... 89
8.2 $R$-Thin Graphs ................................................. 91
8.3 The Cartesian Skeleton ........................................ 94
8.4 Factoring Connected, Nonbipartite, $R$-Thin Graphs ............. 98
8.5 Factoring Connected, Nonbipartite Graphs ......................... 100
8.6 Automorphisms ................................................. 103
8.7 Applications to the Strong Product .............................. 104

# 9 Cancellation

9.1 Cancellation for the Strong Product ............................ 107
9.2 Cancellation for the Direct Product ............................. 109
9.3 Anti-Automorphisms and Factorials .............................. 110
9.4 Graph Exponentiation ......................................... 113

# 10 Lexicographic Product

10.1 Basic Properties ............................................ 115
10.2 Self-Complementarity and Cancellation Properties ............... 117
10.3 Commutativity ................................................. 119
10.4 Factorizations and Nonuniqueness ................................ 122
10.5 Automorphisms ................................................. 125

# III Isometric Embeddings

11 The Relation $\Theta$ and Partial Cubes ........................... 135
11.1 Definition and Basic Properties of $\Theta$ ......................... 135
11.2 Characterizations of Partial Cubes ............................ 138
11.3 Cubic Partial Cubes .......................................... 140
11.4 Scale Embeddings into Hypercubes .............................. 142

12 Median Graphs .................................................. 145
12.1 Mulder’s Convex Expansion .................................... 145
12.2 Inequalities for Median Graphs and Partial Cubes ............... 149
12.3 Median Graphs as Retracts .................................... 151
12.4 A Fixed Cube Theorem ........................................ 154
12.5 Median Networks in Human Genetics ........................... 156

13 The Canonical Isometric Embedding ................................ 159
13.1 The Embedding and Its Properties ................................ 159
13.2 The Relation $\Theta$ and the Cartesian Product ................. 162
13.3 Automorphisms of Canonical Embeddings ......................... 165
23 Factoring the Cartesian Product
23.1 Product Relation .................................. 275
23.2 A Simple Algorithm ............................... 278
23.3 Coordinatization .................................. 280
23.4 Factorization in $O(m \log n)$ Time ............... 281
23.5 Factorization in Linear Time and Space .......... 287

24 Recognizing Direct, Strong, and Lexicographic Products 289
24.1 Direct Product ...................................... 290
24.2 Strong Product ..................................... 293
24.3 Factoring Thin Graphs .............................. 295
24.4 Factoring Non-Thin Graphs ......................... 297
24.5 Lexicographic Product .............................. 299

V Invariants 303

25 Connectivity 307
25.1 Cartesian Product .................................. 307
25.2 Critically Connected Graphs and the Lexicographic Product ........ 311
25.3 Strong and Direct Products ......................... 312

26 Coloring and Hedetniemi's Conjecture 317
26.1 Product Coloring .................................... 317
26.2 Bounds and Three Applications ..................... 320
26.3 Fractional and Circular Chromatic Number ........ 324
26.4 Hedetniemi's Conjecture ............................ 329
26.5 Hedetniemi's Conjecture for 4-Chromatic Graphs .......... 334
26.6 Circular and Fractional Version of Hedetniemi's Conjecture .......... 337

27 Independence Number and Shannon Capacity 341
27.1 Shannon Capacity .................................. 341
27.2 Independence in Direct Products ..................... 347
27.3 Independence in Cartesian Products ................. 351

28 Domination and Vizing's Conjecture 355
28.1 Vizing's Conjecture ................................ 355
28.2 Clark and Suen's Approach .......................... 358
28.3 Fractional Version of Vizing's Conjecture .......... 360
28.4 Domination in Direct Products ....................... 364

29 Cycle Spaces and Bases 367
29.1 The Cycle Space of a Graph ......................... 367
29.2 Minimum Cycle Bases for Cartesian and Strong Products .......... 368
29.3 Minimum Cycle Bases for the Lexicographic Product .......... 371
29.4 Minimum Cycle Bases for the Direct Product .......... 372

30 Selected Results 377
30.1 One-Factorization and Edge-Coloring ................. 377
30.2 Hamilton Cycles and Hamiltonian Decompositions .......... 381
30.3 Clique Minors in Cartesian Products ................ 385
30.4 Reconstruction, Topological Embeddings, and Flows ............ 387
30.5 Modeling Complex Networks ......................... 390
# Related Concepts

## 31 Infinite Graphs

- **31.1 Growth Rate and Ends** ........................................... 400
- **31.2 Free Product** .................................................. 401
- **31.3 Transitive Median Graphs with Finite Blocks** ................. 404
- **31.4 Two-Ended Median Graphs** .................................... 407
- **31.5 Cartesian Product** ............................................ 411
- **31.6 Strong and Direct Product** .................................... 414
- **31.7 Lexicographic Product** ....................................... 417

## 32 Products of Digraphs

- **32.1 Definitions** .................................................. 421
- **32.2 Connectedness** ................................................ 422
- **32.3 Tournaments and the Lexicographic Product** ................. 423
- **32.4 Prime Factorings** ............................................ 425
- **32.5 Cancellation** ................................................ 426

## 33 Near Products

- **33.1 Graph Bundles** ............................................ 429
- **33.2 Approximate Graph Products** ................................ 433
- **33.3 Graph Spectra** ............................................. 436
- **33.4 Zig-Zag Product** ........................................... 439

**Appendix: Hints and Solutions to Exercises** .......................... 443

**Bibliography** .................................................................. 465

**Author Index** ............................................................ 499

**Subject Index** ............................................................ 507

**Symbol Index** ............................................................. 517
