Foreword .................................................................................................................. xii  
Organizing Committee ............................................................................................... xiii  
Program Committee .................................................................................................. xiv  
Reviewers ................................................................................................................... xv  

## Session 1A

Constructive Algorithms for Discrepancy Minimization ............................................ 3  
*Nikhil Bansal*

Bounded Independence Fools Degree-2 Threshold Functions ..................................... 11  
*Ilias Diakonikolas, Daniel M. Kane, and Jelani Nelson*

From Sylvester-Gallai Configurations to Rank Bounds: Improved Black-Box Identity Test for Depth-3 Circuits ................................................................. 21  
*Nitin Saxena and C. Seshadhri*

The Coin Problem and Pseudorandomness for Branching Programs ......................... 30  
*Joshua Brody and Elad Verbin*

Pseudorandom Generators for Regular Branching Programs ................................... 40  
*Mark Braverman, Anup Rao, Ran Raz, and Amir Yehudayoff*

## Session 1B

Boosting and Differential Privacy ................................................................................ 51  
*Cynthia Dwork, Guy N. Rothblum, and Salil Vadhan*

A Multiplicative Weights Mechanism for Privacy-Preserving Data Analysis ................ 61  
*Moritz Hardt and Guy N. Rothblum*

Impossibility of Differentially Private Universally Optimal Mechanisms ................... 71  
*Hai Brenner and Kobbi Nissim*

The Limits of Two-Party Differential Privacy ............................................................. 81  
*Andrew McGregor, Ilya Mironov, Toniann Pitassi, Omer Reingold, Kunal Talwar,  
and Salil Vadhan*
Session 2A

Settling the Polynomial Learnability of Mixtures of Gaussians ................................................................. 93
Ankur Moitra and Gregory Valiant

Polynomial Learning of Distribution Families ................................................................. 103
Mikhail Belkin and Kaushik Sinha

Agnostically Learning under Permutation Invariant Distributions ...................................................... 113
Karl Wimmer

Corrigendum: A Random Sampling Algorithm for Learning an Intersection of Halfspaces .................. 123
Santosh S. Vempala

Learning Convex Concepts from Gaussian Distributions with PCA ....................................................... 124
Santosh S. Vempala

Session 2B

Deciding First-Order Properties for Sparse Graphs ........................................................................ 133
Zdeněk Dvořák, Daniel Král, and Robin Thomas

Logspace Versions of the Theorems of Bodlaender and Courcelle ...................................................... 143
Michael Elberfeld, Andreas Jakoby, and Till Tantau

A Separator Theorem in Minor-Closed Classes ..................................................................................... 153
Ken-ichi Kawarabayashi and Bruce Reed

Optimal Stochastic Planarization ........................................................................................................ 163
Anastasios Sidiropoulos

Session 3A

Determinant Sums for Undirected Hamiltonicity ............................................................................... 173
Andreas Björklund

Fighting Perebor: New and Improved Algorithms for Formula and QBF Satisfiability ................ 183
Rahul Santhanam

The Monotone Complexity of k-clique on Random Graphs .............................................................. 193
Benjamin Rossman

The Complexity of Distributions .......................................................................................................... 202
Emanuele Viola

Hardness of Finding Independent Sets in Almost 3-Colorable Graphs ............................................... 212
Irit Dinur, Subhash Khot, Will Perkins, and Muli Safra

Session 3B

Solving Linear Systems through Nested Dissection .............................................................................. 225
Noga Alon and Raphael Yuster

Approaching Optimality for Solving SDD Linear Systems .................................................................. 235
Ioannis Koutis, Gary L. Miller, and Richard Peng
Fast Approximation Algorithms for Cut-Based Problems in Undirected Graphs

Aleksander Madry

Metric Extension Operators, Vertex Sparsifiers and Lipschitz Extendability

Konstantin Makarychev and Yury Makarychev

Vertex Sparsifiers and Abstract Rounding Algorithms

Moses Charikar, Tom Leighton, Shi Li, and Ankur Moitra

Session 4

Approximation Algorithms for the Edge-Disjoint Paths Problem via Raecke Decompositions

Matthew Andrews

Computational Transition at the Uniqueness Threshold

Allan Sly

Session 5A

Clustering with Spectral Norm and the k-Means Algorithm

Amit Kumar and Ravindran Kannan

Stability Yields a PTAS for k-Median and k-Means Clustering

Pranjal Awasthi, Avrim Blum, and Or Sheffet

The Geometry of Manipulation: A Quantitative Proof of the Gibbard-Satterthwaite Theorem

Marcus Isaksson, Guy Kindler, and Elchanan Mossel

Efficient Volume Sampling for Row/Column Subset Selection

Amit Deshpande and Luis Rademacher

Session 5B

A Non-linear Lower Bound for Planar Epsilon-Nets

Noga Alon

The Sub-exponential Upper Bound for On-Line Chain Partitioning

Bartłomiej Bosek and Tomasz Krawczyk

Improved Bounds for Geometric Permutations

Natan Rubin, Haim Kaplan, and Micha Sharir

On the Queue Number of Planar Graphs

Giuseppe Di Battista, Fabrizio Frati, and János Pach

Session 6A

Polylogarithmic Approximation for Edit Distance and the Asymmetric Query Complexity

Alexandr Andoni, Robert Krauthgamer, and Krzysztof Onak

Information Cost Tradeoffs for Augmented Index and Streaming Language Recognition

Amit Chakrabarti, Graham Cormode, Ranganath Kondapally, and Andrew McGregor
New Constructive Aspects of the Lovasz Local Lemma ............................................. 397  
Bernhard Haeupler, Barna Saha, and Aravind Srinivasan
The Geometry of Scheduling ...................................................................................... 407
Nikhil Bansal and Kirk Pruhs

Session 6B

Strong Fault-Tolerance for Self-Assembly with Fuzzy Temperature .......................... 417  
David Doty, Matthew J. Patitz, Dustin Reishus, Robert T. Schweller, and Scott M. Summers
Holographic Algorithms with Matchgates Capture Precisely Tractable  
Planar #CSP ............................................................................................................... 427
Jin-Yi Cai, Pinyan Lu, and Mingji Xia
A Decidable Dichotomy Theorem on Directed Graph Homomorphisms  
with Non-negative Weights ......................................................................................... 437
Jin-Yi Cai and Xi Chen

Session 7A

Sublinear Optimization for Machine Learning ......................................................... 449  
Kenneth L. Clarkson, Elad Hazan, and David P. Woodruff
Estimating the Longest Increasing Sequence in Polylogarithmic Time ..................... 458
Michael Saks and C. Seshadhri
Testing Properties of Sparse Images .......................................................................... 468
Gilad Tsur and Dana Ron
A Unified Framework for Testing Linear-Invariant Properties .................................. 478
Arnab Bhattacharyya, Elena Grigorescu, and Asaf Shapira
Optimal Testing of Reed-Muller Codes ....................................................................... 488
Arnab Bhattacharyya, Swastik Kopparty, Grant Schoenebeck, Madhu Sudan,  
and David Zuckerman

Session 7B

Overcoming the Hole in the Bucket: Public-Key Cryptography Resilient  
to Continual Memory Leakage ................................................................................. 501
Zvika Brakerski, Yaoe Tsamun Kalai, Jonathan Katz, and Vinod Vaikuntanathan
Cryptography against Continuous Memory Attacks ................................................. 511
Yevgeniy Dodis, Kristy Haralambiev, Adriana López-Alt, and Daniel Wichs
On the Insecurity of Parallel Repetition for Leakage Resilience .............................. 521
Allison Lewko and Brent Waters
Black-Box, Round-Efficient Secure Computation via Non-malleability  
Amplification ............................................................................................................... 531
Hoeteck Wee
Adaptive Hardness and Composable Security in the Plain Model  
from Standard Assumptions ...................................................................................... 541
Ron Canetti, Huijia Lin, and Rafael Pass
Session 8

Bounds on Monotone Switching Networks for Directed Connectivity
Aaron Potechin

Subexponential Algorithms for Unique Games and Related Problems
Sanjeev Arora, Boaz Barak, and David Steurer

Session 9A

Dependent Randomized Rounding via Exchange Properties of Combinatorial Structures
Chandra Chekuri, Jan Vondrak, and Rico Zenklusen

Minimum-Cost Network Design with (Dis)economies of Scale
Matthew Andrews, Spyridon Antonakopoulos, and Lisa Zhang

One Tree Suffices: A Simultaneous O(1)-Approximation for Single-Sink Buy-at-Bulk
Ashish Goel and Ian Post

Minimum-Cost Network Design with (Dis)economies of Scale
Matthew Andrews, Spyridon Antonakopoulos, and Lisa Zhang

Session 9B

On the Computational Complexity of Coin Flipping
Hemanta K. Maji, Manoj Prabhakaran, and Amit Sahai

Sequential Rationality in Cryptographic Protocols
Ronen Gradwohl, Noam Livne, and Alon Rosen

An Efficient Test for Product States with Applications to Quantum Merlin-Arthur Games
Aram W. Harrow and Ashley Montanaro

Session 10A

Subcubic Equivalences between Path, Matrix and Triangle Problems
Virginia Vassilevska Williams and Ryan Williams

Replacement Paths via Fast Matrix Multiplication
Oren Weimann and Raphael Yuster

All-Pairs Shortest Paths in $O(n^3)$ Time with High Probability
Yuval Peres, Dmitry Sotnikov, Benny Sudakov, and Uri Zwick

Approximating Maximum Weight Matching in Near-Linear Time
Ran Duan and Seth Pettie
Session 10B

A Fourier-Analytic Approach to Reed-Muller Decoding .................................................685
  Parikshit Gopalan
Pseudorandom Generators for $\mathbb{CC}^0[p]$ and the Fourier Spectrum of Low-Degree Polynomials over Finite Fields .........................................................695
  Shachar Lovett, Partha Mukhopadhyay, and Amir Shpilka
Matching Vector Codes ........................................................................................................705
  Zeev Dvir, Parikshit Gopalan, and Sergey Yekhanin
Local List Decoding with a Constant Number of Queries .................................................715
  Avraham Ben-Aroya, Klim Efremenko, and Amnon Ta-Shma
Codes for Computationally Simple Channels: Explicit Constructions with Optimal Rate ............................................................................................................723
  Venkatesan Guruswami and Adam Smith

Session 11A

Pure and Bayes-Nash Price of Anarchy for Generalized Second Price Auction ..................735
  Renato Paes Leme and Éva Tardos
Frugal and Truthful Auctions for Vertex Covers, Flows and Cuts ..................................745
  David Kempe, Mahyar Salek, and Cristopher Moore
Frugal Mechanism Design via Spectral Techniques .........................................................755
  Ning Chen, Edith Elkind, Nick Gravin, and Fedor Petrov
Budget Feasible Mechanisms ..........................................................................................765
  Yaron Singer
Black-Box Randomized Reductions in Algorithmic Mechanism Design .........................775
  Shaddin Dughmi and Tim Roughgarden

Session 11B

Backyard Cuckoo Hashing: Constant Worst-Case Operations with a Succinct Representation ..................................................................................................................787
  Yuriy Arbitman, Moni Naor, and Gil Segev
A Lower Bound for Dynamic Approximate Membership Data Structures .......................797
  Shachar Lovett and Ely Porat
Lower Bounds on Near Neighbor Search via Metric Expansion ....................................805
  Rina Panigrahy, Kunal Talwar, and Udi Wieder
Distance Oracles beyond the Thorup–Zwick Bound ......................................................815
  Mihai Pătraşcu and Liam Roditty

Author Index ......................................................................................................................824
