Contents

Preface to the First Edition xiv

Preface to the Third Edition xvii

Acknowledgements xix

Chapter 1. Dimensions, Units, and Conversion Factors 1

- 1.1 The SI System of Units 1
 - 1.1.1 Derived Units 2
 - 1.1.2 Units Outside the SI 3
 - 1.1.3 Comments on Some Quantities and Their Units 4
- 1.2 The American Engineering System (AES) of Units 4
- 1.3 Conversion of Units 6
 - 1.3.1 Conversion Factor Tables 6
 - 1.3.2 The Dimension Table 7
 - 1.3.3 Conversion Equations — Temperature and Pressure 8
- 1.4 Unit Conversions Using the U-Converter Program 11
- 1.5 Amount of Substance — the Mole Unit 11
- 1.6 Density and Concentration 13
 - 1.6.1 Density 13
 - 1.6.2 Composition and Concentration 16
 - 1.6.3 Composition of Gases 18
- 1.7 Electrical Units 20
- 1.8 Calculation Guidelines 21
- 1.9 Summary 22
- References and Further Reading 23
- Exercises 23

Chapter 2. Thermophysical and Related Properties of Materials 26

- 2.1 State of a System and Properties of a Substance 26
- 2.2 The Gibbs Phase Rule 27
 - 2.2.1 Consequences of the Phase Rule for Non-Reactive and Reactive Systems 27
 - 2.2.2 Application of the Phase Rule to One-Phase Non-Reactive Systems 28
 - 2.2.3 Application of the Phase Rule to Multi-Phase Non-Reactive Systems 28
 - 2.2.4 Application of the Phase Rule to Reactive Systems 29
- 2.3 The Gas Phase 30
 - 2.3.1 The Ideal Gas Law 30
 - 2.3.2 Non-Ideal Gas Behavior 32
- 2.4 Condensed Phases 34
- 2.5 Vapor-Liquid Equilibrium (VLE) 35
 - 2.5.1 Mixtures of Condensable and Non-Condensable Gases 38
 - 2.5.2 Software for Making Dew Point and Humidity Calculations 39
- 2.6 Effect of Pressure on Phase Transformation Temperatures 42
- 2.7 Steam and Air Property Calculators 44

2.8	Properties of Solutions	44
2.8.1	Ideal Solutions — Raoult's Law	44
2.8.2	Non-Ideal Solutions — Activity Coefficients	46
2.8.3	Solutions of Gases in Condensed Phases	47
2.8.4	The Solubility Limit	48
2.8.5	The Solubility of Ionic Species in Water; the Solubility Product	49
2.9	Summary	50
	References and Further Reading	51
	Exercises	52
Chapter 3.	Statistical Concepts Applied to Measurement and Sampling	54
3.1	Basic Statistical Concepts and Descriptive Tools	55
3.1.1	Histograms and Frequency Distributions	56
3.1.2	Mean, Standard Deviation, and Variance	59
3.1.3	Median, Percentile and Quantile	60
3.2	Distributions of Random Variables	62
3.2.1	The Uniform Distribution	62
3.2.2	The Normal Distribution	70
3.3	Basic Applications of Inferential Statistics to Measurement	75
3.3.1	Sampling Distributions of the Mean and the Central Limit Theorem	78
3.3.2	Confidence Intervals	82
3.3.3	Treatment of Errors	86
3.3.4	Error Propagation	92
3.4	Curve Fitting	95
3.4.1	Simple Linear Regression and Excel's Trendline Tool	96
3.4.2	Using Solver to Develop Single-Variable Regression Models	101
3.4.3	Multiple Linear and Non-linear Regression	102
3.4.4	Using Solver and Excel's SSD Tool to Find Equation Coefficients	105
3.4.5	Choosing Among Models	106
3.4.6	Polynomial vs. Rational Function Models	116
3.4.7	Outliers	117
3.4.8	Warnings	119
3.5	Experimental Design	119
3.5.1	Factorial Design	120
3.5.2	Fractional Factorial Design	130
3.6	Summary	137
	References and Further Reading	137
	Exercises	138
Chapter 4.	Fundamentals of Material Balances with Applications to Non-Reacting Systems	144
4.1	System Characteristics	144
4.2	Process Classifications	145
4.3	Flowsheets	146
4.4	The General Balance Equation	150
4.5	Material Balances on Simple Non-Reactive Systems	151
4.6	Strategy for Making Material Balance Calculations	154
4.6.1	Guidelines for Setting up a Materials Balance	155
4.6.2	Guidelines for Resolving a Set of Equations	156
4.6.3	Objectives of a Material Balance	157

4.7	Degree-of-Freedom Analysis	158
4.7.1	DOF Concepts	159
4.7.2	DOF Calculation Strategy for a Single Non-Reactive Device	160
4.7.3	A Washing Process Having Zero Degrees of Freedom	162
4.7.4	A Washing Process Having a DOF = +1	168
4.7.5	A Leaching Process Having a DOF = -1	171
4.8	Using Excel-based Computational Tools to Solve Equations	174
4.8.1	Goal Seek and Solver as Computational Aids	174
4.8.2	Software for Conversion of Stream Units: MMV-C	178
4.9	Balances on Systems with Multiple Devices	179
4.10	Extension of Excel's Computational Tools for Repetitive Solving	194
4.10.1	SuperGS	194
4.10.2	SuperSolver	196
4.11	Special Multiple-Device Configurations I — Recycle and Bypass	197
4.12	Special Multiple-Device Configurations II — Counter-Current Flow	205
4.13	Using FlowBal for Material Balance Calculations	216
4.13.1	FlowBal Example #1: Mixer/Splitter	217
4.13.2	FlowBal Example #2: Evaporation/Condensation Process	219
4.13.3	FlowBal Example #3: Systems with Multi-Phase Streams	221
4.14	Continuous-Mixing Devices	223
4.14.1	Steady-State Processes	223
4.14.2	Unsteady-State Systems	226
4.14.3	Inert Gas Flushing	229
4.15	Graphical Representation of Material Balances	232
4.16	Measures of Performance	232
4.17	Controllers	234
4.18	Summary	239
	References and Further Reading	240
	Exercises	241
Chapter 5.	Stoichiometry and the Chemical Equation	248
5.1	Atomic and Molecular Mass	248
5.2	Composition of Compounds and the Gravimetric Factor	249
5.3	Writing and Balancing Chemical Equations	251
5.3.1	Chemical Reaction Concepts	252
5.3.2	Writing and Balancing Chemical Reactions for Simple Processes	253
5.4	Calculations Involving Excess and Limiting Reactants	256
5.5	Progress of a Reaction	258
5.5.1	Extent of Species Reaction and Rate of Reaction Terminology	258
5.5.2	Chemical Reaction Kinetics	259
5.5.3	Reaction Progress and K_{eq}	263
5.5.4	K_{eq} Values from FREED	264
5.5.5	Guidelines for Using K_{eq} to Determine Maximum Reaction Extent	265
5.5.6	Application of Equilibrium Limitations for Gas-Condensed Phase Reactions	266
5.5.7	Application of Equilibrium Limitations to Gas-Phase Reactions	268
5.6	Practical Indicators of the Progress of Reactions and Processes	269
5.7	Parallel, Sequential and Mixed Reactions	273
5.8	Independence of Chemical Reactions	274

5.9	Practical Examples of Reaction Writing and Stoichiometry	274
5.9.1	Calculations in Gas-Condensed Phase Processes	275
5.9.2	Calculations in Gas-Phase Processes	277
5.10	Use of Chemical Reactions in FlowBal	279
5.10.1	FlowBal's Extent of Reaction Tool	280
5.10.2	FlowBal's Insert Equation Tool	282
5.11	Balancing Aqueous (Ionic) Reactions	283
5.12	Summary	286
	References and Further Reading	288
	Exercises	288
Chapter 6	Reactive Material Balances	294
6.1	The General Material Balance Procedure for a Reactive System	294
6.1.1	Independent Chemical Reactions, Independent Species, and Independent Elements	295
6.1.2	Molecular Species Material Balance Method	296
6.1.3	Atomic Species Method	300
6.1.4	Atomic and Molecular Species Balance Examples	302
6.2	The Use of Excel-based Computational Tools in Reactive System Balances	306
6.2.1	Application of SuperSolver	306
6.2.2	Reactive System Material Balances Using FlowBal	309
6.3	Combustion Material Balances	321
6.3.1	Material Balance for the Combustion of a Gaseous Fuel	322
6.3.2	Combustion of Liquid Fuels	327
6.3.3	Combustion of Solid Fuels	327
6.3.4	Use of Feed-Forward and Stack Gas Analysis for Combustion Control	329
6.3.5	Use of FlowBal for Combustion Calculations	333
6.3.6	Trace Combustion Products	335
6.4	The Production of a Reducing Gas	340
6.5	Gas-Solid Oxidation-Reduction Processes	345
6.5.1	Oxidation-Reduction During Calcination	345
6.5.2	The Reduction of Iron Ore Concentrate	348
6.5.3	The Chemistry of Fluidized Bed Reduction of Iron Ore by Hydrogen	349
6.5.4	Excel Simulation of the Fluidized Bed Reduction of Hematite	351
6.5.5	FlowBal Simulation of the Fluidized Bed Reduction of Hematite	355
6.5.6	Shaft Furnace Reduction of Iron Ore Concentrate	359
6.5.7	The Roasting of a Sulfide Concentrate	366
6.6	The Production of Gases with Controlled Oxygen and Carbon Potential	370
6.7	Processes Controlled by Chemical Reaction Kinetics	371
6.8	The Reconciliation of an Existing Materials Balance	372
6.9	The Use of Distribution Coefficients in Material Balance Calculations	377
6.9.1	Use of Tabulated Distribution Coefficients	377
6.9.2	Thermodynamic Databases as a Source of Distribution Coefficient Data	381
6.10	Time-Varying Processes	384
6.11	Systems Containing Aqueous Electrolytes	389
6.11.1	The Stability of Ions	390
6.11.2	Aqueous Processes	392
6.11.3	The Solubility of Ionizable Gases in Water	398
6.12	Summary	402
	References and Further Reading	404
	Exercises	405

Chapter 7. Energy and the First Law of Thermodynamics	410
7.1 Principles and Definitions	410
7.2 General Statement of the First Law of Thermodynamics	413
7.3 First Law for an Open System	415
7.4 Enthalpy, Heat Capacity, and Heat Content	416
7.5 Enthalpy Change of Phase Transformations	418
7.6 Enthalpy Change of Chemical Reactions	420
7.7 Thermodynamic Databases for Pure Substances	421
7.8 Effect of Temperature on Heat of Reaction	426
7.8.1 Application of Kirchhoff's Equation to Chemical Reactions	426
7.8.2 Heat of Transformation for Non-Standard and Non-Physical States	428
7.9 The Properties of Steam and Compressed Air	431
7.9.1 Properties of Steam	431
7.9.2 Properties of Compressed Air	432
7.9.3 Temperature Change for Free Expansion of a Gas	433
7.9.4 Cooling by Steam Venting	435
7.9.5 Enthalpy of Psychrometry	436
7.10 The Use of FREED in Making Heat Balances	437
7.11 Heat of Solution	441
7.11.1 Formation of Non-ideal Metallic Solutions	441
7.11.2 Polymeric Solutions	442
7.11.3 Aqueous Solutions	444
7.12 Summary	445
References and Further Reading	446
Exercises	447
Chapter 8. Enthalpy Balances in Non-Reactive Systems	450
8.1 Combined Material and Heat (System) Balances	450
8.2 Heat Balances for Adiabatic Processes	458
8.3 Psychrometric Calculations	462
8.4 Energy Efficiency	468
8.5 Recovery and Recycling of Heat	469
8.5.1 Heat Exchange Between Fluids	469
8.5.2 Heat Exchange between Solids and Fluids	474
8.5.3 Application of Heat Recovery Techniques to Aluminum Melting	474
8.5.4 Heat Exchange Accompanied by Material Transfer	478
8.6 Multiple-Device System Balances	483
8.7 Use of FlowBal for System Balances	488
8.8 Heat Balances Involving Solution Phases	494
8.9 Enthalpy Change During Dissolution of an Electrolyte	496
8.10 Graphical Representation of a Heat Balance	499
8.11 Summary	500
References and Further Reading	501
Exercises	502

Chapter 9. System Balances on Reactive Processes	505
9.1 Thermal Constraints on a Material Balance	505
9.1.1 Uncoupled System Balances	506
9.1.2 Strategy for Coupled System Balance	508
9.2 Combustion of Fuels	511
9.2.1 Heat of Combustion Calculations	512
9.2.2 Use of Wobbe Index for Combustion Burner Control	514
9.2.3 Combustion of Fuels of Uncertain Molecular Composition	516
9.3 Adiabatic Processes	517
9.3.1 System Balances Involving Combustion Reactions	518
9.3.2 ART for Condensed-Phase Reaction Processes	531
9.4 System Balances Using FlowBal	533
9.5 Quality of Heat and Thermal Efficiency	542
9.6 System Balances with Heat Exchangers	548
9.7 Aqueous Processes	565
9.8 Electrolytic Processes	571
9.8.1 Energy Requirement for Electrorefining	571
9.8.2 Energy Requirement for Electrowinning	572
9.9 Summary	573
References and Further Reading	574
Exercises	574
Chapter 10. Case Studies	577
10.1 Material Balance for an H-Iron Reduction Process with Gas Tempering and Recycle	577
10.2 Mass and Heat Balance Simulation for the Use of DRI in EAF Steelmaking	581
10.3 Natural Gas Combustion Control and the Wobbe Index	588
10.3.1 The Stoichiometry of NG Combustion with Excess Air	588
10.3.2 The Wobbe Index as a Natural Gas Combustion Control Parameter	591
10.4 Reduction of Hematite to Magnetite	592
10.4.1 Preliminary Calculations — Single Reactor	593
10.4.2 Simulation of Hematite Reduction by a Multi-Stage Process	595
10.5 Conversion of Quartz to Cristobalite in a Fluidized Bed	598
10.5.1 Process Characteristics	598
10.5.2 Device Sizing and Heat Loss Calculation	598
10.5.3 Material and Heat Balance Calculations	599
Exercise	600
Appendix. Computational Tools for Making Material and Heat Balance Calculations	601
A.1 U-Converter	601
A.2 Thermophysical Properties of Steam and Air	602
A.3 Stream Units Conversion Calculator (MMV-C)	602
A.4 Extension of Excel Tools for Repeat Calculation	603
A.5 Thermodynamic Database Programs	604
A.6 Flowsheet Simulation and System Balancing	604
General References	605
Index	606

List of Examples

Chapter 1. Dimensions, Units, and Conversion Factors

- 1.1 Mass and Weight of Aluminum 5
- 1.2 Kinetic Energy 6
- 1.3 Energy of Lifting 6
- 1.4 Units of Energy 7
- 1.5 Dimensions for Flowrate 8
- 1.6 Conversion of Temperature 9
- 1.7 Conversion Formula 9
- 1.8 Conversion of Pressure – I 10
- 1.9 Conversion of Pressure – II 10
- 1.10 Pressure in a Liquid 11
- 1.11 The SI and AES Mole 13
- 1.12 The Density of a Slurry 14
- 1.13 Bulk Density of a Solid – I 16
- 1.14 Bulk Density of a Solid – II 17
- 1.15 Concentration Conversion 17
- 1.16 Composition of a Gas on a Wet and Dry Basis 19
- 1.17 Electrical Flow in a Wire 20
- 1.18 Electrical Energy for Metal Deposition 20
- 1.19 Number of Significant Figures 22

Chapter 2. Thermophysical and Related Properties of Material

- 2.1 Removal of Air by a Vacuum Pump 31
- 2.2 Gas Volume and Flowrate 31
- 2.3 Compressibility of Steam 32
- 2.4 Thermal Expansion of Titanium 34
- 2.5 Evaporation of Water in a Closed Vessel 36
- 2.6 Humidity and Dew Point 38
- 2.7 Moisture Content of Clay Dryer Streams 40
- 2.8 Effect of Pressure on the Freezing Point of Water. 42
- 2.9 Effect of Pressure on the Vapor Pressure of Water 43
- 2.10 Vapor and Liquid Phase Composition for the Cu – Ni System 45
- 2.11 Evaporation from Liquid Cd – Mg Alloys at 700 °C 47
- 2.12 Volumetric Solubility of CO₂ in Water 48
- 2.13 The Solubility of CaF₂ in Water 49

Chapter 3. Statistical Concepts Applied to Measurement and Sampling

- 3.1 A Histogram of Ceramic Strength Measurements 57
- 3.2 Percentiles of the %Cu Data using Excel 61
- 3.3 Uniformity of Vermiculite Particles 66
- 3.4 Evaluation of the Normal Distribution for Ceramic Strength Data 74
- 3.5 Finding a 90% Confidence Interval 84
- 3.6 Relationship Between Sample Size and Interval Width Using the Si₂ON₂ Example 85

3.7	Heat Capacity Systematic Error	88
3.8	Ore Assay	89
3.9	Improving Measurement Precision	91
3.10	The Professor Tries Again	92
3.11	Linear Random Error Propagation	93
3.12	Multiplicative Random Error Propagation	94
3.13	Other Random Error Propagation	94
3.14	The Difference Between Propagation of Random and Systematic Errors	95
3.15	Modeling the Heat Capacity of TiO_x	99
3.16	Non-linear Models for the CpTiO_x Data	100
3.17	An Asymptotic Model for the Heat Capacity of TiO_x	102
3.18	Using the Regression Tool to Find Non-Linear Models	104
3.19	Removing the Thickness Variable from the Galvanized Corrosion Example	107
3.20	Hypothesis Testing for the Galvanized Steel Model with Three Independent Variables	108
3.21	Selecting a Model for the Hydrogen Reduction of NiO	114
3.22	Calculating the Pressure-Catalyst Interaction	124
3.23	Effect of a Fractional Factorial Design: How Much Information is Lost?	135
Chapter 4. Fundamentals of Material Balances with Applications to Non-Reacting Systems		
4.1	Distillation of a Cd-Zn Alloy	151
4.2	Charge Calculation for Feed to a Brass Melting Furnace	153
4.3	Vacuum De-Zincing of Lead	153
4.4	Leaching of Salt Cake from Aluminum Recycling	177
4.5	Refining Crude Boric Acid by a Two-Stage Aqueous Process	181
4.6	Recovery of KMnO_4 by Evaporation	184
4.7	Removing Dust and SO_2 from a Roaster Gas	187
4.8	Absorption of HCl	197
4.9	Preparation of a Pigment Precursor	202
4.10	Removal of CuSO_4 from a Pollution Control Residue	208
4.11	Catalyst Reactivation	225
4.12	Dissolution of ZnCl_2	228
4.13	Removal of Hydrogen from Steel	230
4.14	Vacuum Refining of a Cd-Zn Alloy	230
4.15	Control Strategy for Upgrading Spent Reducing Gas	235
Chapter 5. Stoichiometry and the Chemical Equation		
5.1	Use of the Gravimetric Factor for Silicon	250
5.2	Mineralogical Constituents of a Concentrate	250
5.3	Reduction of Wustite by CO	253
5.4	Production of Molybdenum Carbide	255
5.5	Production of Titanium by the Kroll Process	257
5.6	The Reaction Between Oxygen and Carbon	272
5.7	Reduction of Molybdenum Oxide with Hydrogen	275
5.8	Carbothermic Reduction of Zinc Oxide	276
5.9	Steam Reforming of Methane	278

- 5.10 Controlled Oxidation of Pyrite 284
- 5.11 Dissolution of Gold in Cyanide Solution 285

Chapter 6. Reactive Material Balances

- 6.1 Production of Sulfur by Reduction of Sulfur Dioxide 302
- 6.2 Chlorination of Silicon 304
- 6.3 Application of FlowBal to Stack Gas Desulfurization 314
- 6.4 Combustion of Natural Gas with XSA 325
- 6.5 Effect of Oxygen Enrichment on the Oxidant Required for Complete Combustion 326
- 6.6 Stack Gas Composition and Dew Point for Coal Combustion with Dry Air 328
- 6.7 Calculation of % Excess Air from Stack Gas Analysis 332
- 6.8 Calculation of CO, H₂ and NO content in Hot Stack Gas 338
- 6.9 Calculation of Reformer Gas Composition 342
- 6.10 Calculation of dpt from Gas Analysis 344
- 6.11 Calcination of Wet Pickling Cake 347
- 6.12 Simulation of a Pre-Reduction Fluidized Bed Process 357
- 6.13 Material Balance on Shaft Furnace Reduction of Hematite 363
- 6.14 Roasting a Zinc Sulfide Concentrate 369
- 6.15 Material Balance for BOF Steelmaking 378
- 6.16 Leaching of Scrubber Dust 395
- 6.17 The Optimum Precipitation of CaCO₃ by CO₂ 398

Chapter 7. Energy and the First Law of Thermodynamics

- 7.1 Work and Heat During the Compression of an Ideal Gas 415
- 7.2 Heat Capacity and Enthalpy for a Flux 417
- 7.3 Heat of Fusion of Lead 419
- 7.4 Standard Heat of the Water-Gas Shift Reaction from 800 to 1500 K 427
- 7.5 Supercooling Liquid Tin 430
- 7.6 Combustion of CO with Preheated Air 437
- 7.7 Adiabatic Compression of Steam 438
- 7.8 Enthalpy Change During Reduction of NiO with C 439
- 7.9 Temperature Change of an Adiabatic Reaction 440

Chapter 8. Enthalpy Balances in Non-Reactive Systems

- 8.1 Heat Balance for Melting Aluminum 454
- 8.2 Heat Balance for Spray Cooling of Hot Air 455
- 8.3 Fog Cooling of Ceramic Parts 457
- 8.4 Atomization of a Molten Metal 459
- 8.5 Dehumidifying Spent Gas from an Iron Ore Reducing Furnace 463
- 8.6 Using Stack Gas to Dry Cadmium Powder 466
- 8.7 Heat Exchange in a Waste Heat Boiler 471
- 8.8 Preheating HCl in a Pebble-Bed Vertical Shaft Heat Exchanger 474
- 8.9 Lowering the Water Temperature from a Crystallizer 481
- 8.10 Condensation of Zinc Vapor from a Gas 486
- 8.11 Production of Distilled Water 492

Chapter 9. System Balances on Reactive Processes	
9.1 Heat of Combustion of a Spent Gas from a Reduction Process	513
9.2 Effect of Preheating Combustion Air on AFT	519
9.3 Production of a Reducing Gas	521
9.4 Adiabatic Reforming of Fuel Oil	523
9.5 Oxidation of SO ₂ to SO ₃ for Sulfuric Acid Production	525
9.6 Metallothermic Reduction of Uranium Tetrafluoride	531
9.7 Lime-Assisted Reduction of Magnetite	539
9.8 Calcination of Magnesium Carbonate	552
9.9 Formation of Nickel Ferrite by Spray Roasting	561

CD Contents

1 CD Content Descriptions
2 Air
3 Atmospheres
4 Charts
5 Combustion Documents
6 Copper Smelting
7 FlowBal and MMV-C
8 Material and Heat Balance Notes
9 NG Combust & Wobbe Index
10 Statistics
11 Steel
12 SuperGoalSeek
13 SuperSolver
14 Thermodynamic Database
15 Unit Conversions
