Handbook of Bioplastics and Biocomposites: Engineering Applications

Edited by
Srikanth Pilla
Wisconsin Institute for Discovery
University of Wisconsin-Madison, USA
Contents

Foreword by Amar K. Mohanty xix
Preface xxi
List of Contributors xxiii

1. Engineering Applications of Bioplastics and Biocomposites – An Overview 1
   Srikanth Pilla
   1.1 Introduction 1
      1.1.1 Bioplastics 2
      1.1.2 Biocomposites 2
   1.2 Engineering Applications of Bioplastics and Biocomposites 3
      1.2.1 Processing of Bioplastics and Biocomposites 4
      1.2.2 Packaging Applications of Bioplastics and Biocomposites 6
      1.2.3 Civil Engineering Applications of Bioplastics and Biocomposites 7
      1.2.4 Biomedical Applications of Bioplastics and Biocomposites 9
      1.2.5 Automotive Applications of Bioplastics and Biocomposites 11
      1.2.6 General Engineering Applications of Bioplastics and Biocomposites 12
   1.3 Conclusions 13
   References 14

Part 1: Processing of Bioplastics and Biocomposites

2. The Handling of Various Forms of Dry Ingredients in Bioplastics Manufacturing and Processing Applications 19
   Andy Kovats
   2.1 Introduction 19
   2.2 Ingredient Properties Affecting Feedrates and Dry Ingredients Handling 20
      2.2.1 Name 20
      2.2.2 Bulk Density 20
      2.2.3 Compressibility 21
      2.2.4 Particle Form 21
      2.2.5 Particle Size 21
      2.2.6 Angle of Repose 21
      2.2.7 Angle of Slide 21
## Contents

2.2.8 Packing and Compaction 22
  2.2.8.1 Packing, By Pressure 22
  2.2.8.2 Compacting, By Vibration 22

2.2.9 Moisture Content 22

2.3 Storage Hoppers and Ingredient Activation 22
  2.3.1 Vibration 22
  2.3.2 Internal Stirring Agitation 22
  2.3.3 Concentric Screw Agitation 24
  2.3.4 External Agitation (Flexible Hopper) 24

2.4 Volumetric Feeders 26
  2.4.1 Single Screw Feeders – Sizing and Feed Rate Calculation 27
    2.4.1.1 Screw Sizing 27
    2.4.1.2 Screw Fill Efficiency 27
    2.4.1.3 Feed Rate Calculation 28
    2.4.1.4 Feeder Selection 28
    2.4.1.5 Spiral Screw 29
    2.4.1.6 Blade Screw 30
  2.4.2 Twin Screw Feeders 30
    2.4.2.1 Twin Concave Screws 30

2.5 Vibrating Tray Feeders 31

2.6 Belt Feeders 32

2.7 Loss-In-Weight Feeders 34
  2.7.1 Scale 34
  2.7.2 Feed Device 34
  2.7.3 Weigh Hopper 36
  2.7.4 Feeder Controller 36
  2.7.5 Refill Device 36
  2.7.6 Principle of Operation—Continuous Feeding from a Loss-In-Weight Feeder 36
  2.7.7 Loss-In-Weight Feeding Helpful Comments 37
    2.7.7.1 Refilling a Loss-In-Weight Feeder 37
    2.7.7.2 Venting a Loss-In-Weight Feeder 37
    2.7.7.3 In Plant Vibration Effects on Feeder Performance 38
    2.7.7.4 Temperature Effects in Feeder Performance 38
    2.7.7.5 Scale Stabilization Time 38
    2.7.7.6 Flexible Connections 39

2.8 Special Feeders for BioPlastics Ingredients 39
  2.8.1 Bio Ingredients—Typical Physical Characteristics 39
  2.8.2 The Physical Characteristics Aggravate Controlled Rate Feeding 39
  2.8.3 Fibers Need to be Tested in Feeders to Determine How They Can Be Fed 40
    2.8.3.1 Start with a Traditional Feeding Device, Example a Screw Feeder 40
3. Modeling the Processing of Natural Fiber Composites Made
Using Liquid Composite Molding
Reza Masoodi and Krishna M. Pillai

3.1 Introduction to Liquid Composite Molding (LCM) Processes
3.2 Introduction to the Use of Bio-fibers and Bio-resins in Polymer Composites
3.3 Physics for Modeling Mold-filling in LCM Processes
3.3.1 Modeling Single-phase Fluid Flow in Porous Media
3.3.2 Modeling LCM Mold Filling in Synthetic Fiber Mats
3.3.3 Modeling LCM Mold Filling in Natural Fiber Mats
3.3.3.1 Swelling of Natural Fiber Mats in Organic Resins
3.3.3.2 Some Recent Studies on Changes in Permeability of Natural-Fiber Mats Due to Liquid Absorption and Swelling
3.3.3.3 Mold Filling Modeling in Natural-fiber Mats After Including the Swelling of Fibers Due to Liquid Absorption
3.3.4 Constant Inlet-Pressure Injection Solution
3.3.5 Constant Flow-rate Injection Solution
3.4 Numerical Simulation
3.4.1 Mold Filling Simulation in Non-swelling Fiber Mats
3.4.2 Recent Developments in LCM Mold Filling Simulation in the Swelling Natural-fiber Mats
3.5 Summary and Conclusions

Part 2: Packaging Applications

4. Bioplastics Based Nanocomposites for Packaging Applications
   J. Soulestin, K. Prashantha, M.F. Lacrampe and P. Krawczak
4.1 Introduction
4.2 Definitions and Classification
4.3 Biopolymers Based Packaging Materials
4.3.1 Poly Lactic Acid (PLA)
4.3.2 Starch Based Materials
4.3.3 Poly Hydroxyalkanoates (PHA)
4.3.4 Proteins
4.4 Structure of Bio-nanocomposites
4.4.1 Bio-nanocomposites for Packaging Applications
4.4.2 Structure of Nanocomposites Based on Natural Nanofillers
4.4.2.1 Layered Silicate Filled Nanocomposites

8. Starch Based Composites for Packaging Applications 189
K. M. Gupta
8.1 Introduction 189
8.1.1 Starch: History, Characteristics and Structure 190
8.1.2 Different Sources of Starch and Modified Starches 192
8.1.3 Processing of Starch before Using as Matrix in Composite 193
8.1.4 Improving the Properties of Starch 194
8.2 Composite Materials 195
8.2.1 Advantages and Limitations of Composites 195
8.2.2 Classification of Starch-Based Biocomposites 196
8.2.3 Particulate Biocomposites 198
8.2.4 Flake Biocomposites 198
8.2.5 Hybrid Biocomposites 198
8.2.6 Sandwich Biocomposites 199
8.3 Biopolymers/Biodegradable Polymers for use as Matrix of the Composite 200
8.3.1 Important Bio-Polymers 201
8.3.2 Biodegradable Polymers from Starch and Cellulose 201
8.3.3 Biodegradable Thermoplastic Polymer: Polylactic Acid (PLA) 202
8.4 Starch as a Source of Bio-Polymer (Agro-Polymer) 203
8.4.1 Aliphatic Polyester-Grafted Starch 207
8.5 Fibers 208
8.5.1 Natural Fibers 208
8.6 Mechanics of Fiber Composite Laminates 212
  8.6.1 Rule of Mixture for Unidirectional Biocomposites Lamina 212
  8.6.2 Generalized Hooke’s Law and Elastic Constants 216
8.7 Introduction to Packaging and its Functions 216
  8.7.1 Characteristics of a Good Packaging Material 217
  8.7.2 Vivid Kinds of Packaging Materials and their Applications 217
  8.7.3 Necessity of Biodegradable Packaging in Food Industry 219
8.8 Starch Based Packaging Materials 219
  8.8.1 Bio-degradable Packaging from Agricultural Feed Stocks 220
8.9 Flexible, Active and Passive, and Intelligent Packagings 221
  8.9.1 Necessity of Active and Intelligent Packaging 222
8.10 Testing Standards/Norms for Packaging 222
8.11 Recent Advances in Starch Based Composites for Packaging Applications 226
8.12 Plasticized Starch and Fiber Reinforced Composites for Packaging Applications 226
  8.12.1 Plasticized Wheat Starch (PWS) and Cellulose Fibers Composites for Packaging Applications 226
  8.12.2 Biodegradable Packing Materials based on Waste Collagen Hydrolysate Cured with Dialdehyde Starch 227
  8.12.3 Novel Starch Thermoplastic/Bioglass® Composite 228
  8.12.4 Bio-Based Polymer Composites Using Poly-Lactic Acid 229
  8.12.5 Protein-Starch Based Plastic Produced by Extrusion and Injection Molding 229
  8.12.6 Mechanical Properties of Starch Modified by Ophiostoma SPP for Food Packaging Industry 230
  8.12.7 Functional Properties of Extruded Starch Acetate Blends 231
  8.12.8 Thermoplastic Starch and Bacterial Cellulose Based Biocomposite 231
  8.12.9 Starch/Rubber Composites 232
  8.12.10 Fiber-Reinforced PLA Composites 232
  8.12.11 Biodegradation of Starch and Polulactic Acid-Based Materials 233
  8.12.12 Bacterial Cellulose Fiber-Reinforced Starch Biocomposites 233
  8.12.13 Starch-based Completely Biodegradable Polymer Materials 234
  8.12.14 Maleated-Polycaprolactone/Starch Composite 235
8.13 Starch Based Nanocomposites for Packaging Applications 235
  8.13.1 Biodegradable Starch-based Nano-clay Composites 235
  8.13.2 MMT-Filled Potato Starch Based Nanocomposites 236
  8.13.3 Sweet Potato Starch/OMMT Nanocomposite for Packaging Application 236
  8.13.4 Biocomposites from Wheat Straw Nanofibers 237
  8.13.5 Cellulose Nanocomposites with Starch Matrix 238
8.14 Starch Foam, Film, and Coated Composites for Packaging Applications

8.14.1 Blended Composite Film of Chitosan and Starch 238
8.14.2 PHB Matrix with Potato Starch and Thermo-cell Filled Biocomposites for Films and Coatings 239
8.14.3 Jute and Flax-Reinforced Starch Based Composite Foams 240
8.14.4 Egg Albumen-Cassava Starch Composite Films Containing Sunflower-Oil Droplets 240
8.14.5 Starch Based Loose-Fill Packaging Foams 241
8.14.6 Chemically Modified Starch (RS4)/PVA Blend Films 241
8.14.7 Starch/Polycaprolactone Films 242

8.15 Effects of Various Parameters on Behavior of Packaging Purpose Biocomposites

8.15.1 Influence of Fibers on Mechanical Properties of Cassava Starch Foam 242
8.15.2 Water Absorption Behavior of Oil Palm Fiber-Low Density Polyethylene Packaging Purpose Composites 244
8.15.3 Hygroscopic Effect on PHB Matrix with Potato Starch Biocomposites for Food Packaging 244
8.15.4 Effect of Degradation and Mineralization of Starch in Different Media 246
8.15.5 Effect of Blending of Chitosan and Starch 246
8.15.6 Effect of Starch Composition on Structure of Foams 247

8.16 Characterization of Biocomposites

8.16.1 Characterization of Starch/OMMT Nanocomposites for Packaging Applications 248
8.16.2 Characterization of Blend Film of Chitosan Starch 251
8.16.3 Morphological and Thermomechanical Characterization of Thermoplastic Starch/ Monomorillonate Nanocomposites 253

8.17 Composite Manufacturing Methods

8.17.1 Prepreg Lay-up Process 255
8.17.2 Wet Lay-up (or Hand Lay-up) Process 255
8.17.3 Thermoplastic Pultrusion Process 255
8.17.4 Starch Wet Milling Process 256
8.17.5 Comparison of Various Manufacturing Processes 256

8.18 Futuristic Research Outlook 259

8.19 Glossary of Terminology

Part 3: Civil Engineering Applications

9. Vegetable Oil Based Rigid Foam Composites 269

Venkata Chevali, Michael Fuqua and Chad A. Ulven

9.1 Rigid Foam Composites 269
9.2 Biofoams 270
   9.2.1 Reactant Chemistry 272
   9.2.2 Environmental Impact 274
9.3 Production Methods 275
   9.3.1 Mold Casting 275
   9.3.2 Reaction Injection Molding 276
   9.3.3 Slabstock Molding 276
9.4 Reinforcement Effects 277
   9.4.1 Short Fiber/Fillers 277
   9.4.2 Long Fiber 279
9.5 Applications/Case Study 280
   9.5.1 Potential Industry Utilization 280
   9.5.2 Mass Transit Application Case Study 280
References 282

10. Sustainable Biocomposites Based for Construction Applications 285
    Hazizan Md Akil and Adlan Akram Mohamad Mazuki
10.1 Introduction 285
    10.1.1 Polymer Matrix Composites (PMC’s) 285
10.2 Problem Statement 286
    10.2.1 Minimum Environmental Impact 286
    10.2.2 Water and Humidity Issues 286
    10.2.3 Processing of Fiber Reinforced Polymer Composites (FRP) 287
10.3 Case study: Fabrication, Characterization and Properties of Pultruded Kenaf Reinforced Composites 288
    10.3.1 Raw Materials 288
    10.3.2 Fiber Chemical Treatment 288
    10.3.3 Preparation of Pultruded Composites 289
    10.3.4 Testings
       10.3.4.1 Fiber Bundle Tensile Test 289
       10.3.4.2 Flexural Testing 290
       10.3.4.3 Dynamic Mechanical Analysis (DMA) 290
       10.3.4.4 Degradation Test 290
       10.3.4.5 Scanning Electron Microscopy (SEM) 291
10.4 Result and Discussions 291
    10.4.1 Single Kenaf Fiber 291
       10.4.1.1 Morphological Study of Kenaf Fiber 291
       10.4.1.2 Fourier Transmission Infrared (FTIR) Analysis 292
       10.4.1.3 Fiber Bundle Tensile Test 294
    10.4.2 Pultruded Composites 295
       10.4.2.1 Apparent Density of Composite and Void Content 295
       10.4.2.2 Flexural Test 296
       10.4.2.3 Dynamic Mechanical Analysis (DMA) 299
       10.4.2.4 Thermogravimetric Analysis (TGA) 309

15. Bioplastics and Vegetal Fiber Reinforced Bioplastics for Automotive Applications

Daniela Rusu, Séverine A.E. Boyer, Marie-France Lacrampe and Patricia Krawczak

15.1 Introduction
15.1.1 Plastics and Automotive Applications
15.1.2 Definitions of Bioplastics and Biocomposites
15.2 Bioplastics for Automotive Applications
15.2.1 Bio-based Polyamides (PAs) and Copolyamides
15.2.1.1 PA 11
15.2.1.2 Other Commercial Bio-based PAs
15.2.1.3 Bio-based PAs—in R&D State
15.2.1.4 Bio-based Polyether-block-amides (PEBAs)
15.2.1.5 Polyphtalamides (PPAs) 412
15.2.1.6 Conclusion 413

15.2.2 Polyactic Acid (PLA) 413
15.2.2.1 PLA and PLA-based Compounds 413
15.2.2.2 Durability Issues of PLA Components 419
15.2.2.3 Conclusion 422

15.2.3 Bio-based Polyesters and Copolyesters – other than PLA 422
15.2.3.1 PTT from Bio-based 1,3-Propanediol 422
15.2.3.2 PBS from Bio-based Succinic Acid 423
15.2.3.3 Bio-based Thermoplastic Copolyesters and Copolyetheresters 423
15.2.3.4 Conclusion 423

15.2.4 Thermoplastic Starch (TPS) and its Non-biodegradable Blends 424

15.2.5 Bio-based Polyolefins: BioPE and BioPP 425

15.2.6 Bio-based Polyurethanes (PURs) 426
15.2.6.1 Bio-based Thermoplastic Elastomeric Polyurethanes (TPUs) 426
15.2.6.2 Bio-based Thermosetting Polyurethane Foams 427
15.2.6.3 Conclusion 428

15.2.7 Bio-based Thermosetting Resins – Other than Thermosetting Polyurethanes 428
15.2.7.1 Bio-based Unsaturated Polyesters Resins 429
15.2.7.2 Bio-based Epoxy Resins 430
15.2.7.3 Other Bio-based Thermosetting Resins 431
15.2.7.4 Conclusion 431

15.3 Biocomposites Based on Bioplastics for Automotive Applications 431

15.4 Specific Issues Concerning Processing and Recycling 438
15.4.1 Processing 438
15.4.1.1 Bioplastics 438
15.4.1.2 Biocomposites 438
15.4.2 Recycling 439

15.5 General Conclusions 441

Part 6: General Engineering Applications

16. Cellulose Nanofibers Reinforced Bioplastics and Their Applications 453
   Susheel Kalia, B.S. Kaith and Shalu Vashistha

16.1 Introduction 453
16.2 Cellulose Fibers 454
16.2.1 Sources and Processing Methods 454
16.2.2 Chemical Composition 455
16.2.3 Properties 455
16.3 Bioplastics: Synthesis, Properties and Applications 456
16.4 Cellulose Nanofibers 458
   16.4.1 Methods of Cellulose Nanofibers Production 459
      16.4.1.1 Electrospinning 459
      16.4.1.2 Mechanical & Chemical Defibrillation 459
      16.4.1.3 Bacterial Cellulose Nanofibers 460
   16.4.2 Characterization of Cellulose Nanofibers 461
   16.4.3 Applications of Cellulose Nanofibers 462
16.5 Cellulose Nanofibers Reinforced Bioplastics 465
   16.5.1 Synthesis and Properties of Nanocomposites 465
   16.5.2 Applications of Nanocomposites 467
16.6 Conclusion 467
References 468

17. Nanocomposites Based on Starch and Fibers of Natural Origin 471
   Kestur Gundappa Satyanarayana, Fernando Wypych, Marco Aurelio Woehl, Luiz Pereira Ramos and Rafael Marangoni
17.1 Introduction 471
   17.1.1 Historical Developments 471
   17.1.2 Nanocomposites 474
   17.1.3 Biopolymers 475
   17.1.4 Market, Perspectives, Potentials of and Opportunities in Bionanocomposites 476
17.2 Biomaterials 477
   17.2.1 Cellulose 477
   17.2.2 Bio Matrix Materials 478
      17.2.2.1 Starch 478
      17.2.2.2 Thermoplastic Starch (TPS) 481
   17.2.3 Cellulose Based Nano-bioreinforcements/Fillers 483
      17.2.3.1 Plant-based Cellulose 484
      17.2.3.2 Bacterial Cellulose 486
      17.2.3.3 Preparation of Cellulose Microfibrils/Whiskers 487
      17.2.3.4 Properties of Microfibrils/Whiskers 489
      17.2.3.5 Morphology Studies of Microfibrils/Whiskers 491
17.3 Bionanocomposites Based on Plasticized Starch Reinforced with Plant Based Cellulose/Bacterial Cellulose Nanofibers 493
   17.3.1 Processing Aspects 493
      17.3.1.1 Preparation of the Bionanocomposite Using Plant Based Cellulose 493
      17.3.1.2 Preparation of the Bionanocomposite Films Using Bacterial Cellulose 495
   17.3.2 Properties of Bionanocomposites 496
      17.3.2.1 Properties of the Bionanocomposite Films Using Plant Based Cellulose 496
      17.3.2.2 Properties of the Bionanocomposite Films Using Bacterial Cellulose 497
17.4 Applications and Products of Bionanocomposites 503
18. Biogenic Precursors for Polyphenol, Polyester and Polyurethane Resins 511

Ali Harlin

18.1 Composite Materials 511
   18.1.1 Reaction Polymers 511
   18.1.2 Hybrid Materials and Composites 512

18.2 Biogenic Raw Materials 515
   18.2.1 Sugar Platform 515
   18.2.2 Lipid Platform 515
   18.2.3 Bio-based Aromates 516
   18.2.4 Biogenic Olefin Platform 516

18.3 Glyserols 519
   18.3.1 Glycerol 519
   18.3.2 Epichlorohydrin 519
   18.3.3 Glyceryl Carbonate 519
   18.3.4 Glycerol Formal 520

18.4 Acid Platform 520
   18.4.1 Acrolein 520
   18.4.2 Hydroxy Acids 520
      18.4.2.1 Glycolic Acid 520
      18.4.2.2 3-Hydroxypropionic Acid 521
   18.4.3 Valerolactones 522
   18.4.4 Acrylic Acid 522
   18.4.5 Succinic Acid 522

18.5 Diols 523
   18.5.1 Ethylene Glycol 523
   18.5.2 Propylene Glycol 523
   18.5.3 1,2-Propylene Glycol 525
   18.5.4 1,4-Butanediol (BDO) 525

18.6 Higher Diols 525
   18.6.1 1,5-Pentadiol 525
   18.6.2 Methyl-1,4-butanediol 526
   18.6.3 1,6-Hexanediol 526
   18.6.4 Isosorbide 526

18.7 Polyols 526
   18.7.1 Erythritol 526
   18.7.2 Polyols 527
   18.7.3 Polyglycerols 527
   18.7.4 Polyol Modification 527

18.8 Plastizers 528
   18.8.1 Terpene Phenolic Resin 528
   18.8.2 Sterols 528
18.8.3 Rosin Acids 528
18.8.4 Epoxidized Plant Oils 529
18.9 Furans 529
18.9.1 2,5-Furandicarboxylic Acid 531
18.9.2 2,5-Bis(hydroxymethyl)furan 531
18.9.3 Furfuryl Alcohol 531
18.9.4 Furfural Resins 531
18.10 Terpenes 532
18.10.1 Camphene 533
18.10.2 Limonene 533
18.10.3 Limonene Oxide 534
18.10.4 Terpinolene 534
18.10.5 p-Cymene 534
18.10.6 Benzoazines 535
18.11 Phenols 535
18.11.1 Novolac-type Phenolic Resins 535
18.11.2 Tannins 539
18.11.3 Tannic Acid 539
18.12 Lignin 540
18.12.1 Lignin as Chemical Source 540
18.12.2 Lignin Pyrolysis 541
18.12.3 Lignin Cracking 541
18.12.4 Lignin Oxidation 542
18.13 Conclusions 543
