Contents

Novel Engineering, Construction, and Management Technologies

A Study of Implementation of IP-S2 Mobile Mapping Technology for Highway Asset Condition Assessment ................................................................. 1
J. M. De la Garza, C. G. Howerton, and D. Sideris

An Automated Stabilization Method for Spatial-to-Structural Design Transformations ........................................................................................................ 9
C. D. J. Smulders and H. Hofmeyer

Determination of the Optimal Positions of Window Blinds through Multi-Criteria Search ................................................................. 17
B. Raphael

Performance of Two Model-Free Data Interpretation Methods for Continuous Monitoring of Structures under Environmental Variations ...................................................... 25
Irwanda Laory, Thanh N. Trinh, and Ian F. C. Smith

Condition-Based Maintenance in Facilities Management ................................................................. 33
Joseph Neelamkavil

Toward Sustainable Financial Innovation Policies in Infrastructure: A Framework for Ex-Ante Analysis ................................................................. 41
Ali Mostafavi, Dulcy Abraham, and Daniel DeLaurentis

A Multi-Objective Generic Algorithm Approach for Optimization of Building Energy Performance ................................................................. 51
Don Chen and Zhili (Jerry) Gao

Comparison of Image-Based and Manual Field Survey Methods for Indoor As-Built Documentation Assessment ................................................................. 59
Laura Klein, Nan Li, and Burcin Becerik-Gerber

Image-Based 3D Reconstruction and Recognition for Enhanced Highway Condition Assessment ................................................................. 67
Berk Uslu, Mani Golparvar-Fard, and Jesus M. de la Garza

Design and Evaluation of Algorithm and Deployment Parameters for an RFID-Based Indoor Location Sensing Solution ................................................................. 77
N. Li, S. Li, B. Becerik-Gerber, and G. Calis

Impact of Ambient Temperature, Tag/Antenna Orientation, and Distance on the Performance of Radio Frequency Identification in Construction Industry ................................................................. 85
S. Li, N. Li, G. Calis, and B. B. Gerber

Multiobjective Optimization of Advanced Shoring Systems Used in Bridge Construction ................................................................. 94
Khaleed Nassar, Mohamed El Masry, and Yasmine Sherif
Application of Dimension Reduction Techniques for Motion Recognition: Construction Worker Behavior Monitoring .......................................................... 102
SangUk Han, SangHyun Lee, and Feniosky Peña-Mora

Civil and Environmental Engineering Challenges for Data Sensing and Analysis ......110
Gauri M. Jog, Shuai Li, Burcin Becerik Gerber, and Ioannis Briakis

Automated 3D Structure Inference of Civil Infrastructure Using a Stereo Camera Set .......................................................... 118
H. Fathi, I. Brilakis, and P. Vela

Unstructured Construction Document Classification Model through Support Vector Machine (SVM) .................................................. 126
Tareq Mahfouz

Automatic Look-Ahead Schedule Generation System for the Finishing Phase of Complex Projects for General Contractors ........................................ 134
N. Dong, M. Fischer, and Z. Haddad

Sustainable Construction Ontology Development Using Information Retrieval Techniques .......................................................... 143
Yacine Rezgui and Adam Marks

Machine Vision Enhanced Post-Earthquake Inspection ........................................ 152
Zhenhua Zhu, Stephanie German, Sara Roberts, Ioannis Brilakis, and Reginald DesRoches

Continuous Sensing of Occupant Perception of Indoor Ambient Factors .............. 161
Farrokh Jazizadeh, Geoffrey Kavulya, Laura Klein, and Burcin Becerik-Gerber

Effects of Color, Distance, and Incident Angle on Quality of 3D Point Clouds .......... 169
Geoffrey Kavulya, Farrokh Jazizadeh, and Burcin Becerik-Gerber

The Effective Acquisition and Processing of 3D Photogrammetric Data from Digital Photogrammetry for Construction Progress Measurement .................................................. 178
C. Kim, H. Son, and C. Kim

Data Transmission Network for Greenhouse Gas Emission Inspection ................. 186
Qinyi Ding, Xinyuan Zhu, and Qingbin Cui

Wearable Physiological Status Monitors for Measuring and Evaluating Workers' Physical Strain: Preliminary Validation ............................ 194
Umberto C. Gatti, Giovanni C. Migliaccio, and Suzanne Schneider

A Framework for Optimizing Detour Planning and Development around Construction Zones .......................................................... 202
M. Jardaneh, A. Khalafallah, A. El-Nashar, and N. Elmitiny

A Multi-Objective Decision Support System for PPP Funding Decisions ............ 210
Morteza Farajian and Qingbin Cui

Truck Weigh-in-Motion Using Reverse Modeling and Genetic Algorithms .......... 219
G. Vala, I. Flood, and E. Obonyo

The Application of Artificial Neural Network for the Prediction of the Deformation Performance of Hot-Mix Asphalt ........................................ 227
Ilseok Oh and Wasim Barham

vi
An Approach for Occlusion Detection in Construction Site Point Cloud Data
Dennis J. Bouvier, Chris Gordon, and Matthew McDonald

Applications of Machine Learning in Pipeline Monitoring
Yujie Ying, Joel Harley, James H. Garrett, Jr., Yuanwei Jin, Irving J. Oppenheim, Jun Shi, and Lucio Soibelman

Using Electimize to Solve the Time-Cost-Tradeoff Problem
in Construction Engineering
Mohamed Abdel-Raheem and Ahmed Khalafallah

Vision-Based Crane Tracking for Understanding Construction Activity
J. Yang, P. A. Vela, J. Teizer, and Z. K. Shi

Design of Optimization Model and Program to Generate Timetables
for a Single Two-Way High Speed Rail Line under Disturbances
T. W. Ho, C. Y. Lin, S. M. Tseng, and C. C. Chou

Learning and Classifying Motions of Construction Workers and Equipment
Using Bag of Video Feature Words and Bayesian Learning Methods
Jie Gong and Carlos H. Caldas

Evolutionary Software Development to Support Ethnographic Action Research
Timo Harimann

Determining the Benefits of an RFID-Based System for Tracking
Pre-Fabricated Components in a Supply Chain
E. Ergen, G. Demiralp, and G. Guven

Coordination of Converging Construction Equipment in Disaster Response
Albert Y. Chen and Feniosky Peña-Mora

A Management System of Roadside Trees Using RFID and Ontology
Nobuyoshi Yabuki, Yuki Kikushige, and Tomohiro Fukuda

Transforming IFC-Based Building Layout Information into a Geometric
Topology Network for Indoor Navigation Assistance
S. Taneja, B. Akinci, J. H. Garrett, L. Soibelman, and B. East

Business Models for Decentralised Facility Management Supported by Radio
Frequency Identification Technology
Z. Cong, L. Allan, and K. Menzel

Requirements for Autonomous Crane Safety Monitoring
Xiaowei Luo, Fernanda Leite, and William J. O'Brien

A Knowledge-Directed Information Retrieval and Management Framework
for Energy Performance Building Regulations
Lewis John McGibney and Bimal Kumar

Novel Sensor Network Architecture for Intelligent Building Environment
Monitoring and Management
Qian Huang, Xiaohang Li, Mark Shaurette, and Robert F. Cox

Planning of Wireless Networks with 4D Virtual Prototyping for Construction
Site Collaboration
O. Koseoglu
Comparison of Camera Motion Estimation Methods for 3D Reconstruction of Infrastructure .............................................................. 363
   Abbas Rashidi, Fei Dai, Ioannis Brilakis, and Patricio Vela

Multi-Image Stitching and Scene Reconstruction for Evaluating Change Evolution in Structures ......................................................... 372
   Mohammad R. Jahanshahi and Sami F. Masri

Computer Vision Techniques for Worker Motion Analysis to Reduce Musculoskeletal Disorders in Construction ........................................ 380
   Chunxia Li and Sang Hyun Lee

A Novel Crack Detection Approach for Condition Assessment of Structures .......................................................... 388
   Mohammad R. Jahanshahi and Sami F. Masri

Developing an Efficient Algorithm for Balancing Mass-Haul Diagram ............................................................... 396
   Khaled Nassar, Ossama Hosney, Ebrahim A. Aly, and Hesham Osman

Design, Engineering, and Analysis

Standardization of Structural BIM .............................................................. 405
   N. Nawari

Collaborative Design of Parametric Sustainable Architecture .......................................................... 413
   J. C. Hubers

Developing Common Product Property Sets (SPie) .............................................................. 421
   E. William East, David T. McKay, Chris Bogen, and Mark Kalin

Integration of Geotechnical Design and Analysis Processes Using a Parametric and 3D-Model Based Approach ......................................................... 430
   M. Obergrießer, T. Euringer, A. Borrmann, and E. Rank

Aspects of Model Interaction in Mechanized Tunneling .............................................................. 438
   K. Lehner, K. Erlemann, F. Hegemann, C. Koch, D. Hartmann, and M. König

Robust Construction Scheduling Using Discrete-Event Simulation .............................................................. 446
   M. König

The Development of the Virtual Construction Simulator 3: An Interactive Simulation Environment for Construction Management Education ......................................................... 454
   Sanghoon Lee, Dragana Nikolic, John I. Messner, and Chimay J. Anumba

Preparation of Constraints for Construction Simulation .............................................................. 462
   Arnim Marx and Markus König

Using IFC Models for User-Directed Visualization .............................................................. 470
   A. Chris Bogen and E. William East

Understanding Building Structures Using BIM Tools .............................................................. 478
   N. Nawari, L. Itani, and E. Gonzalez

Efficient and Effective Quality Assessment of As-Is Building Information Models and 3D Laser-Scanned Data .............................................................. 486
   P. Tang, E. B. Anil, B. Akinci, and D. Huber
Occlusion Handling Method for Ubiquitous Augmented Reality Using Reality Capture Technology and GLSL ........................................ 494
Suyang Dong, Chen Feng, and Vineet R. Kamat

Arsalan Heydarian and Mani Golparvar-Fard

Building Information Modeling Implementation—Current and Desired Status ....... 512
Pavan Meadati, Javier Irizarry, and Amin Akhnoukh

Simulating the Effect of Access Road Route Selection on Wind Farm Construction .................................................................. 520
Mohamed El Masry, Khaled Nassar, and Hesham Osman

Toward the Exchange of Parametric Bridge Models Using a Neutral Data Format .................................................................. 528
Yang Ji, André Borrmann, and Mathias Obergrießer

An Agent-Based Approach to Model the Effect of Occupants’ Energy Use Characteristics in Commercial Buildings ............................ 536
Elie Azar and Carol Menassa

Incorporating Social Behaviors in Egress Simulation .................................................................................................................. 544
Mei Ling Chu, Xiaoshan Pan, and Kincho Law

3D Thermal Modeling for Existing Buildings Using Hybrid LIDAR System ................................................................................ 552
Y. Cho and C. Wang

A Generalized Time-Scale Network Simulation Using Chronographic Dynamics Relations ........................................................................ 560
A. Francis and E. Miresco

Automating Codes Conformance in Structural Domain .................................................................................................................. 569
Nawari O. Nawari

Benefits of Implementing Building Information Modeling for Healthcare Facility Commissioning .................................................. 578
C. Chen, H. Y. Dib, and G. C. Lasker

A Real Time Decision Support System for Enhanced Crane Operations in Construction and Manufacturing ................................. 586
Amir Zavichi and Amir H. Behzadan

The Competencies of BIM Specialists: A Comparative Analysis of the Literature Review and Job Ad Descriptions .......................... 594
M. B. Barison and E. T. Santos

Adaptive Guidance for Emergency Evacuation for Complex Building Geometries ........................................................................ 603
Chih-Yuan Chu

Improving the Robustness of Model Exchanges Using Product Modeling “Concepts” for IFC Schema ................................................ 611
Manu Venugopal, Charles Eastman, Rafael Sacks, and Jochen Teizer

Framework for an IFC-Based Tool for Implementing Design for Deconstruction (DfD) ................................................................ 619
A. Khalili and D. K. H. Chua
Temporary Facility Planning of a Construction Project Using BIM (Building Information Modeling) .......................................................... 627
Hyunjoo Kim and Hongseob Ahn

Energy Simulation System Using BIM (Building Information Modeling) ......................................................... 635
Hyunjoo Kim and Kyle Anderson

Semantic Modeling for Automated Compliance Checking ......................................................... 641
D. M. Salama and N. M. El-Gohary

Ontology-Based Standardized Web Services for Context Aware Building Information Exchange and Updating ......................................................... 649
J. C. P. Cheng and M. Das

IFC-Based Construction Industry Ontology and Semantic Web Services Framework ........................................................................ 657
L. Zhang and R. R. A. Issa

Using Laser Scanning to Access the Accuracy of As-Built BIM ......................................................... 665
B. Giel and R. R. A. Issa

BIM Facilitated Web Service for LEED Automation ................................................................ 673
Wei Wu and Raja R. A. Issa

Optimization of Construction Schedules with Discrete-Event Simulation Using an Optimization Framework ........................................................................ 682
M. Hamm, K. Szczesny, V. V. Nguyen, and M. König

Development of 5D CAD System for Visualizing Risk Degree and Progress Schedule for Construction Project ........................................................................ 690
Leen-Seok Kang, Hyoun-Seok Moon, Hyeon-Seung Kim, Gwang-Yeol Choi, and Chang-Hak Kim

Integration of Safety in Design through the Use of Building Information Modeling ........................................................................ 698
Jia Qi, R. R. A. Issa, J. Hinze, and S. Olbina

A Study of Sight Area Rate Analysis Algorithm on Theater Design ......................................................... 706
Yeonhee Kim and Ghang Lee

Algorithm for Efficiently Extracting IFC Building Elements from an IFC Building Model ........................................................................ 713
Jongsung Won and Ghang Lee

Sustainable and Resilient Infrastructure

Evaluating the Role of Healthcare Facility Information on Health Information Technology Initiatives from a Patient Safety Perspective ........................................................................ 720
J. Lucas, T. Bulbul, C. J. Anumba, and J. Messner

EVMS for Nuclear Power Plant Construction: Variables for Theory and Implementation ........................................................................ 728
Y. Jung, B. S. Moon, and J. Y. Kim

Evaluating Eco-Efficiency of Construction Materials: A Frontier Approach ............................. 736
O. Tatari and M. Kucukvar
Analysis of Critical Parameters in the ADR Implementation Insurance Model

Xinyi Song, Carol C. Menassa, Carlos A. Arboleda, and Feniosky Peña-Mora

Tarek Mahfouz

Dynamic Life Cycle Assessment of Building Design and Retrofit Processes

Sarah Russell-Smith and Michael Lepech

A Real Options Approach to Evaluating Investment in Solar Ready Buildings

B. Ashuri and H. Kashani

Agile IPD Production Plans As an Engine of Process Change

Renate Fruchter and Plamen Ventsislavov Ivanov

An Automated Collaborative Framework to Develop Scenarios for Slums: Upgrading Projects According to Implementation Phases and Construction Planning

O. E. Anwar and T. A. Aziz

Preparing for a New Madrid Earthquake: Accelerating and Optimizing Temporary Housing Decisions for Shelby County, TN

Omar El-Anwar, Khaled El-Rayes, and Amr Elnashai

Requirements for an Integrated Framework of Self-Managing HVAC Systems

Xuesong Liu, Burcu Akinci, James H. Garrett, Jr., and Mario Bergés

A Web-Based Resource Management System for Damaged Transportation Networks

W. Orabi

Time, Cost, and Environmental Impact Analysis on Construction Operations

Gulbin Ozcan-Deniz, Victor Ceron, and Yimin Zhu

Learning to Appropriate a Project Social Network System Technology

Ivan Mutis and R. R. A. Issa

Decision Support for Building Renovation Strategies

H. Yin, P. Stack, and K. Menzel

Environmental Performance Analysis of a Single Family House Using BIM

A. A. Raheem, R. R. A. Issa, and S. Olbina

Cutting-Edge Development

Enhancing Student Learning in Structures Courses with Building Information Modeling

Wasim Barham, Pavan Meadati, and Javier Irizarry

Using Applied Cognitive Work Analysis for a Superintendent to Examine Technology-Supported Learning Objectives in Field Supervision Education

Fernando A. Mondragon Solis and William J. O’Brien

Developing and Testing a 3D Video Game for Construction Safety Education

Jeong Wook Son, Ken-Yu Lin, and Eddy M. Rojas

xi
Attention and Engagement of Remote Team Members in Collaborative Multimedia Environments ........................................... 875
R. Fruchter and H. Cavallin

Teaching Design Optioneering: A Method for Multidisciplinary Design Optimization ......................................................... 883
David Jason Gerber and Forest Flager

Synectical Building of Representation Space: A Key to Computing Education ............................................................... 891
Sebastian Koziolek and Tomasz Arciszewski

Enhancing Construction Engineering and Management Education Using a CONstruction Industry Simulation (COINS) ................................................... 899
T. M. Korman and H. Johnston

Effectiveness of Ontology-Based Online Exam Platform for Programming Language Education .......................................... 907
Chia-Ying Lin and Chien-Cheng Chou
