

THIRD EDITION

STRUCTURAL GEOLOGY

OF ROCKS AND REGIONS

GEORGE H. DAVIS

The University of Arizona, Tucson

STEPHEN J. REYNOLDS

Arizona State University, Tempe

CHARLES F. KLUTH

Colorado School of Mines Geology and
Geological Engineering, Colorado

WILEY

JOHN WILEY & SONS, INC.

Detailed Table of Contents

PART I	
FUNDAMENTALS	I
CHAPTER 1 Nature of Structural Geology	2
Motivation and Context	2
Practical Applications	5
Field Work	7
“Deformation” is the Heart of the Matter	7
Architecture and Structural Geology	16
Plate Tectonics and Structural Geology	18
The Fundamental Structures	21
Concept of Detailed Structural Analysis	29
The Time Factor	32
CHAPTER 2 Displacement and Strain	34
Transformations	34
Displacement Vectors and Deformation	35
Kinematics	36
Deformation and Kinematics in Active Tectonic Settings	40
Translation	44
Rotation	53
Strain	59
Coaxial and Noncoaxial Strain	78
Three-Dimensional Strain Analysis	84
On to Dynamics	89
CHAPTER 3 Force, Stress, and Strength	90
Introduction	90
Dynamic Analysis	91
Force	95
Traction	101
Stress	106
Determining Relationships between Stress and Strain	120
Conducting Deformation Experiments in the Laboratory	128

Evaluating Mechanical Behavior During Testing	138
Conclusions	147
CHAPTER 4 Deformation Mechanisms and Microstructures	148
Exploring at the Fine Scale	148
Crystalline Structure and the Strength of Solids	149
Slip Systems and Bonding	152
Deformation Mechanisms	157
Deformation Experiments	181
The Brittle–Ductile Transition	188
A Few Final Thoughts	191
PART 2	
STRUCTURES	192
CHAPTER 5 Joints	193
Definitions and Distinctions	193
Glimpse of Joint Formation in Response to Loading and Stress	201
Detailed Look at Individual Joint Surfaces	204
Growth of Joint Sets	212
Joint Spacing in Relation to a Single Bed	216
Joint Saturation and Joint In-Filling	223
Creation of Joints in the Laboratory	226
Influence of Pore Fluid Pressure on Jointing	230
A Microscopic Look at the Mechanics of Jointing	236
Examples of Interpreting Regional Joint Patterns	239
Opportunities in Fracture Analysis	247
CHAPTER 6 Faults	249
Introduction	249
Recognizing Faults: The Physical Character of Faults	251
Brittle Fault Rocks	260
Map and Subsurface Expressions of Faults	267
The Naming and Classification of Faults	272
Determination of Slip on Faults	278
Strain Significance of Faults	281
Mechanics of Faulting	286
Thrust Fault Systems	305
Normal Faulting	321

Strike-Slip Faulting	334
Concluding Remarks	343
CHAPTER 7 Folds	344
Incentives for Study	344
Anticlines and Synclines	351
Geometric Analysis of Folds	358
Transition from Geometry to Dynamics	383
Buckling	384
Flexural Folding	390
Kink Folding	397
Passive Folding	401
Regional Tectonic Folding	403
Conclusions	404
CHAPTER 8 Fault-Fold Interactions	405
Incentives for Even Further Study	405
General Model of Fault-Related Folding	407
Assumptions About Dip Domains and Fault-Related Folds	408
Fault-Bend Folds	409
Fault-Propagation Folds	414
Fault-Related Folding Created Through Stretching	428
Salt-Related Structures	433
Structural Inversion	443
Folds Associated With Strike-Slip Faulting	447
Role of Structural Development in Sedimentation	449
Structural Balance	452
Small-Scale Structures, and Scaling	459
Concluding Thoughts	461
CHAPTER 9 Foliation and Lineation	463
Nature of Foliation and Lineation	463
Nature of Cleavage	465
Microscopic Properties of Cleavage and Schistosity	472
Strain Significance of Cleavage	475
Relationship of Cleavage to Other Structures	487
Foliation	492
Lineation	501
Descriptive/geometric Analysis of Foliation and Lineation	511

Strain, Shearing, and Fabric Development	515
Estimating Strain	520
"Tectonite-Forming" Geologic Settings	526
On to Shear Zones	529
CHAPTER 10 Shear Zones and Progressive Deformation	530
The Nature of Shear Zones	530
Types of Shear Zones	540
Why Shear Zones Form, Thin, and Thicken	546
Strain in Shear Zones	548
Determining Sense of Shear	556
Fabric Development and its Relation to the Amount of Strain in Shear Zones	577
Inside the Ellipse: Progressive Deformation	586
On to Active Tectonics	598
CHAPTER 11 Active Tectonics	599
Structural Geology and Active Tectonics	599
Plan of Action for This Chapter	600
Western United States	603
The San Andreas Fault	606
The Los Angeles Basin	616
The Eastern California Shear Zone	627
Relation To Cascadia, American Northwest	649
The Basin and Range	656
The Wasatch Front	666
The Hurricane Fault	673
Finishing Up	677
Summing Up	680
PART 3	
DESCRIPTIVE ANALYSIS: HOW TO FUNCTION IN THE FIELD, AND HOW TO REDUCE THE DATA	683
A. Nature of Descriptive Analysis	684
B. Geologic Mapping	687
C. Mapping Contact Relationships	697
D. Identifying Primary Structures	706
E. Measuring the Orientations of Structures	711
F. Preparing Geologic Cross-Sections	718
G. Preparing Subsurface Contour Maps	726
H. Using Orthographic Projection	728

I. Carrying Out Stereographic Projection	735
J. Evaluating Rotation Using Stereographic Projection	751
K. Determining Slip on a Fault through Orthographic and Stereographic Projection	757
L. Carrying Out Strain Analysis	760
M. Determining the Relationship of Faults to Principal Stress Directions	767
N. Carrying Out Joint Analysis	769
O. Engaging in Fault Analysis	778
P. Carrying Out Fold Analysis	779
Q. Deciphering Structure in Boreholes	785
R. Studying Shear Zones in the Field	790
S. Determining Focal Mechanisms for Earthquakes	793
