American Society of Sugar Beet Technologists

Proceedings from the 34th Biennial Meeting

AGRICULTURE

Salt Lake City, Utah
February 28 – March 3, 2007
TABLE OF CONTENTS

Mr. Simon A. Harris, Advisor
British Sugar plc
Sugar Situation in the European Union ................................................................. 1

Mr. William H. Hejl, President
World Association of Beet and Cane Growers
Sugar Situation in the World ....................................................................................... 21

Section A – AGRONOMY

Whole rotation effects on soil nitrate-N for sugar beet production.
Bredehoeft, Mark W.1* and John A. Lamb2, 1Southern Minnesota
Beet Sugar Cooperative and 2University of Minnesota .............................................. 53

Eleven years of micro-rate use in North Dakota and Minnesota.
Dexter, Alan G.* and John L. Luecke, North Dakota State University
and the University of Minnesota ........................................................................... 54

Improvements and innovations in vented pile storage methodology
and construction.
Elison, David M., The Amalgamated Sugar Company LLC ................................... 55

Beta vulgaris response to amide herbicides.
Guza, Corey J.*, James F. Stewart and Lee A. Hubbell, Michigan
Sugar Company ....................................................................................................... 60

Determine the ideal population in 30 inch row spacing.
Hubbell, Lee A.*, James F. Stewart and David B. Wishowski,
Michigan Sugar Company ...................................................................................... 61

Exploiting the genetic potential of sugarbeets.
Jansen, Rudolf, KWS SAAT AG ............................................................................. 63

Are rhizomania resistant sugar beet varieties nitrogen hogs?
Lamb, John A.1*, Mark W. Bredehoeft2 and Steven R. Roehl2,
1University of Minnesota and 2Southern Minnesota Beet Sugar
Cooperative ............................................................................................................. 64
Two year in-field sprayer calibration survey of sugar beet growers.
Morishita, Don W.1*, Stanley R. Gortsema2, Jerry D. Neufeld2 and Dale L. Baker2, 1University of Idaho, Twin Falls R&E Center and 2University of Idaho, Power, Canyon, and Minidoka County Cooperative Extension..........................65

Ethofumesate carryover potential in wheat and barley.
Morishita, Don W.1*, Michael P. Quinn1, Robyn J. Walton1 and Michael A. Becerra2, 1University of Idaho, Twin Falls R&E Center and 2Idaho Food Quality Assurance Laboratory..........................67

Interference of broadleaf weeds in sugarbeets.
Odero, Dennis C.1*, Abdelouhab Mesbah2 and Stephen D. Miller1, 1University of Wyoming, Department of Plant Sciences and 2University of Wyoming, Powell Research and Extension Center..........................69

Impact of genetic resistance to sugarbeet cyst nematode on yield and quality of sugarbeets.
Poindexter, Steven S.1*, James F. Stewart2, Lee A. Hubbell2, Ralph Fogg2 and Corey J. Guza2, 1Michigan State University Extension and 2Michigan Sugar Company..........................73

Chemical and mechanical control of group 1 resistant wild oats.
Regitnig, Peter J* and Jennifer J. Nitschelm, Rogers Sugar Ltd. .........................76

Field applications of sugar factory spent lime: Effects on soil phosphorus.
Sims, Albert L.1*, Carol E. Windels1 and Carl A. Bradley2, 1University of Minnesota, Northwest Research and Outreach Center and 2North Dakota State University ..................................................77

30 in. vs. 18 in. row sugarbeet production — Nebraska research and grower experiences.
Smith, John A.*, C. Dean Yonts, Robert M. Harveson, Robert G. Wilson and Gary L. Hein, University of Nebraska.................................................80

Influence of a Cercospora tolerant sugarbeet variety on the BEETCAST prediction model.
Stewart, James F.*, Corey J. Guza, Lee A. Hubbell, David B. Wishowski and Mark A. Anderson, Michigan Sugar Company ........................................90

Agriculture information systems for the beet sugar industry.
Telck, Alan B., AgTerra Technologies, Inc. .................................................92
Late season weed control in sugarbeets by hand-weeding, mowing, or selective application of glyphosate.

Wilson, Robert G.*, John A. Smith and C. Dean Yonts, University of Nebraska

Influence of ALS-resistant kochia control in corn on kochia control the following year in sugarbeet.

Wilson, Robert G., University of Nebraska

Impact of mid-season water stress on sugarbeet growth.

Yonts, C. Dean, University of Nebraska

Section A – POSTER SESSION

Effect of row width and population on weeds and sugar beet yield and quality in Michigan.

Armstrong, Jon-Joseph Q.* and Christy L. Sprague, Michigan State University

Response of four commercial sugar beet varieties to s-metolachlor and dimethenamid-P.

Bollman, Scott L.* and Christy L. Sprague, Michigan State University

Fine-tuning nitrogen recommendations for sprinkler and flood irrigated sugarbeet.

Eckhoff, J. L. A.* and C. R. Flynn, Montana State University, Eastern Agricultural Research Center

Evaluation of XBEET™, an enhanced sugarbeet priming system.

Hemb, Randall L.1*, James F. Stewart2, Lee A. Hubbell2, Ralph Fogg2, Corey J. Guza2, David B. Wishowski2 and Steven S. Poindexter3, 1Germains Technology Group, 2Michigan Sugar Company and 3Michigan State University Extension

Weed control programs in glyphosate-resistant sugar beets.

King, Steven R., Montana State University, Southern Agricultural Research Center

Use of a randomized nested block design in genetically modified, non-selective herbicide resistant sugarbeet hybrid testing.

Roehl, Steve R.1*, Richard Horsley2 and Osten Tvedt1, 1Southern Minnesota Beet Sugar Cooperative and 2North Dakota State University
Timing of postemergence standard-split applications based on growing degree days in sugar beet.
Sprague, Christy L.* and Gary E. Powell, Michigan State University .......................... 122

Identifying risk management zones for Cercospora leafspot control in Michigan.
Wishowski, David B.*, James F. Stewart, Lee A. Hubbell, Ralph Fogg and Corey J. Guza, Michigan Sugar Company .................................................. 124

Sections B & E – PHYSIOLOGY, BIOTECHNOLOGY, GENETICS AND GERmplasm

Virus induced gene silencing of a gene repressing flowering in sugar beet.
Fenwick, Ann1, Rebecca L. Larson2, Patrick A. Reeves3, Christopher M. Richards3 and Lee Panella2*, 1Beet Sugar Development Foundation, 2USDA-ARS - SBRU and 3USDA-ARS - National Center for Germplasm .............................................................. 126

Protein changes associated with sugar beet resistance to Fusarium oxysporum.
Larson, Rebecca1*, Amy Hill1 and Alberto Nunez2, 1USDA-ARS, Sugarbeet Research Unit, Crops Research Laboratory and 2USDA-ARS-ERRC ........................................................................... 127

Rhizomania as seen from inside the beet cell: Identifying proteome differences between sugar beet infected with Beet necrotic yellow vein virus and healthy sugar beet.
Larson, Rebecca L.1*, Alberto Nunez2 and William M. Wintermantel3, 1USDA-ARS, Sugarbeet Research Unit, Crops Research Laboratory, 2USDA-ARS-ERRC and 3USDA-ARS .................................................................................. 128

Integration of genetic, physical, and expression mapping resources for gene discovery and beet improvement.
McGrath, J. Mitchell, USDA-ARS, Sugarbeet & Bean Research, Michigan State University ................................................................. 129

Genetics of water content in sugar beet roots.
McGrath, J. Mitchell1* and Daniele Trebbi2, 1USDA-ARS, Sugarbeet & Bean Research and 2Keygene N.V. ................................................................................... 130

Development of novel sources of resistance to Beet curly top virus through virus-induced gene silencing.
Wintermantel, William M.*, Amy G. Anchieta and Patricia A. Nicely, USDA-ARS .................................................................................... 134
Sections B & E – POSTER SESSION

Ethylene production and its effect on storage respiration rate in wounded and unwounded sugarbeet roots.
Klotz, Karen L.* and Jeffrey C. Suttle, USDA-ARS, Northern Crop Science Laboratory ................................................................. 138

A sugar beet Affymetrix chip.
Kraft, Thomas¹, Gerhard Steinrücken¹*, Jan Gielen², Tong Zhu³ and Todd Moughamer³, ¹Syngenta Seeds AB, ²Syngenta Seeds S.A.S. and ³Syngenta Biotechnology Inc. ................................................................. 142

A Beta vulgaris serine proteinase inhibitor gene (BvSTi) regulated by sugar beet root maggot feeding on moderately resistant F1016 roots.
Smigocki, A. C., D. P. Puthoff, S. D. Ivic-Haymes and S. Zuzga, USDA-ARS, Molecular Plant Pathology Laboratory ................................................................. 143

Section C – ENTOMOLOGY AND PLANT PATHOLOGY

Host and viral factors that promote the emergence of resistance breaking variants of Beet necrotic yellow vein virus (BNYVV).
Acosta-Leal, Rodolfo*, Becky Bryan and Charlie M. Rush, Texas Agricultural Experiment Station ................................................................. 151

A procedure for rapid detection of resistance breaking variants of Beet necrotic yellow vein virus (BNYVV) using real-time RT-PCR allelic discrimination assays.
Acosta-Leal, Rodolfo* and Charlie M. Rush, Texas Agricultural Experiment Station ................................................................. 152

Seed treatment insecticides to manage soil insect pests of sugarbeet.
Boetel, Mark A.*, Robert J. Dregseth, Allan J. Schroeder and Ayanava Majumdar, North Dakota State University, Department of Entomology ................................................................. 153

Control of Aphanomyces damping-off of sugarbeet by hymexazol seed treatment when disease onset occurs at different plant ages and inoculum levels.
Brantner, Jason R.* and Carol E. Windels, University of Minnesota, NW Research & Outreach Center ................................................................. 154
Crop protection innovations in sugarbeet - Bayer CropScience.
Daniels, Jeffrey L., Charles Hicks, Kelven Luff, John O. Martin, Dean W. Maruska, George Simkins, Michael Smith and Kevin B. Thorsness*, Bayer CropScience

Relationship of clothianidin plus beta cyfluthrin, combined with build-up coating options, to germination and field emergence of Beta vulgaris seeds.
Daniels, Jeffrey L.* and Michael R. Schwarz, Bayer CropScience

Interaction of varying Fusarium oxysporum isolates with different sugarbeet lines.
Hanson, Linda E.*, Amy L. Hill and Lee Panella, USDA-ARS, SBRU

Variability in varietal response for resistance to sugar beet root aphid and potential implications.
Hein, Gary L.*, Rosana Serikawa, John E. Foster and John Thomas, 1University of Nebraska, Panhandle Research and Extension Center and 2University of Nebraska-Lincoln, Department of Entomology

Timing of azoxystrobin fungicide application for control of Rhizoctonia crown and root rot on sugarbeet.
Jacobsen, Barry J.*, John C. Ansley, Ken Kephart, Nina K. Zidack, Alan Dyer and Mareike R. Johnston, 1Montana State University, Department of Plant Science and Plant Pathology and 2Montana Agricultural Experiment Station – Southern Agricultural Research Center

Incidence and spatial distribution of rhizomania in fields planted to rhizomania resistant cultivars.
Jones, David C.*, Fekede Workneh and Charlie M. Rush, Texas Agricultural Experiment Station

What is the best time to apply fungicides for effective and economical Cercospora leaf spot control?
Khan, Mohamed F. R.* and Randy Nelson, North Dakota State University & University of Minnesota, Plant Pathology Department

Some like it straight, some like it mixed!
Khan, Mohamed F. R.* and Randy Nelson, North Dakota State University & University of Minnesota, Plant Pathology Department
Survey of field soils for *Cercospora beticola* by PCR and ELISA.
Lartey, Robert T.*, TheCan Caesar-TonThat, William M. Iversen, Sophia Hanson and Robert G. Evans, USDA-ARS, Northern Plains Agricultural Laboratory ........................................................................................................................................ 164

Transgenic rhizomania resistant hybrids of sugar beets, providing strong resistance against different strains of BNYVV.
Lennefors, Britt-Louise1*, Eugene I. Savenkov2, Jan Bensefelt1, Elisabeth Wremerth-Weich1, Petra Van Roggen1, Stig Tuvesson1, Lisette Laurin1, Jari P. T. Valkonen3 and Jan Gielen4, 1Syngenta Seeds AB, 2Swedish University of Agricultural Sciences, Department of Plant Biology and Forest Genetics, 3University of Helsinki, Department of Applied Biology and 4Syngenta Seeds ........................................................................................................................................ 169

Performance of rhizomania resistant sugarbeet under normal and resistance-breaking strains of *Beet necrotic yellow vein virus*.
Lewellen, Robert T.*, Hsing-Yeh Liu, Anne M. Gillen and Carl A. Strausbaugh, USDA-ARS ........................................................................................................................................ 171

Distribution and differentiation of resistance-breaking isolates of *Beet necrotic yellow vein virus* in the United States.
Liu, Hsing-Yeh* and Robert T. Lewellen, USDA-ARS ........................................................................................................................................ 172

Discovery of resistance to seedling disease caused by *Rhizoctonia solani* AG2-2, description of the host-pathogen interaction, and development of a seedling disease screening nursery.
McGrath, J. Mitchell1* and Suba Nagendran2, 1USDA-ARS, Michigan State University, Sugarbeet & Bean Research and 2Michigan State University, Department of Plant Pathology ........................................................................................................................................ 174

Characterisation of soils from different geographic origins containing *Beet necrotic yellow vein virus* (BNYVV) which overcomes Rz1 resistance in sugar beet.
Pferdmenges, Friederike and Mark Varrelmann*, Institute for Sugar Beet Research, Department of Phytopathology ........................................................................................................................................ 180

*Cercospora beticola* mating types in the North Central USA.
Secor, Gary A.1*, Viviana V. Rivera1, Judith Rengifo1 and John J. Weiland2, 1North Dakota State University, Department of Plant Pathology and 2USDA-ARS, Northern Crop Science Laboratory ........................................................................................................................................ 182

Sugarbeet root rot in the Intermountain West.
Strausbaugh, Carl A.* and Anne M. Gillen, USDA-ARS, NWISRL ........................................................................................................................................ 184
Discovery of Beet Black Scorch Virus in the United States.
Weiland, John J.¹*, Rebecca L. Larson², Thomas P. Freeman³, Michael C. Edwards¹ and Hsing-Yeh Liu⁴, ¹USDA-ARS, Red River Valley Agricultural Research Center, ²USDA-ARS, Sugarbeet Production Laboratory, ³North Dakota State University and ⁴USDA-ARS, Sugarbeet Production Laboratory................................................................. 185

Spent lime effects on yield, quality, and Aphanomyces root rot of sugar beet.
Windels, Carol E.¹*, Jason R. Brantner¹, Albert L. Sims¹ and Carl A. Bradley², ¹University of Minnesota, NW Research & Outreach Center and ²North Dakota State University, Dept. of Plant Pathology................................. 186

Section C – POSTER SESSION

The effect of seed treatment and post-emergence insecticides on emergence, phytotoxicity, sugarbeet root maggot damage and root yield.
Gallian, John J.¹*, Kelly V. Tindall¹, David M. Elison² and Dale L. Baker³, ¹University of Idaho, Twin Falls R&E Center, ²Amalgamated Sugar Company and ³University of Idaho .......................................................... 195

Characterization of genes associated with potential for fungicide resistance in Cercospora beticola.
Hanson, Linda E.¹*, Gary D. Franc² and Lee Panella¹, ¹USDA-ARS, SBRU and ²University of Wyoming............................................................... 196

Predicting disease severity for sugar beet root rots using a pre-plant soil disease assay.
Harveson, Robert M., University of Nebraska, Panhandle Research and Extension Center ................................................................. 197

Effectiveness of a precision applicator in applying pesticide granules synchronously with sugar beet seed.
Hein, Gary L.*, Rick Patrick, Charles K. Flint and John A. Smith, University of Nebraska-Lincoln, Panhandle Research and Extension Center.................................................................................... 203
Effect of three bacterial disease-control agents on the entomopathogenic fungi, *Metarhizium anisopliae* and *Beauveria bassiana*.

Jaronski, Stefan T. *, Cindy Fuller-Schaefer¹, Ben Larson² and Barry J. Jacobsen³, ¹USDA-ARS, Northern Plains Agricultural Research Laboratory, ²Montana State University Extension Service and ³Montana State University, Department of Plant Sciences and Plant Pathology ........................................................................................................206

Detection of *Cercospora beticola* by PCR in amended and naturally infested field soil.

Lartey, Robert E.*, TheCan Caesar-TonThat, Sophia Hanson, William M. Iversen and Robert G. Evans, USDA-ARS, Northern Plains Agricultural Laboratory ........................................................................................................211

Bio-based management of sugarbeet root maggot by integrating an insect pathogenic fungus and cereal cover crops.

Majumdar, Ayanava *, Mark A. Boetel¹, Stefan T. Jaronski², Robert J. Dregseth¹ and Allan J. Schroeder¹, ¹North Dakota State University, Department of Entomology and ²USDA-ARS, Northern Plains Agricultural Research Laboratory ........................................................................................................217

Evaluation of Cruiser seed treatment for control of wireworm damage in sugar beets.

Nitschelm, Jennifer J., Peter J. Regitnig* and Greg. W. Nikles, Rogers Sugar Ltd ..................................................................................................................................................218

Influence of host resistance and insecticide seed treatments on curly top in sugar beets.

Strausbaugh, Carl A.*, Anne M. Gillen¹, John J. Gallian², Kelly Tindall², Stacey Camp³ and J. R. Stander⁴, ¹USDA-ARS, NWISRL, ²University of Idaho, Twin Falls R&E Center, ³Amalgamated Sugar Company and ⁴Betaseed, Inc. ..................................................................................................................................................219

Mapping of curly top incidence and determination of genetic variation among viruses responsible for curly top in California.

Wintermantel, William M.*, Amy G. Anchieta¹ and Rod Clark², ¹USDA-ARS and ²California Curly Top Control Board ..................................................................................................................................................220
