# Table of Contents

Preface  
Committees and Sponsors  

## I. OVERVIEW OF LOW RADIOACTIVITY MEASUREMENT FACILITIES

**North American underground facilities**  
R. Henning  

**Overview of the European underground facilities**  
L. Pandola  

**Asian facilities**  
M. Nakahata  

## II. LOW BACKGROUND COUNTING TECHNIQUES

**Neutron activation analysis: Techniques and applications**  
Ryan MacLellan  

**Ultra sensitive neutron activation measurements of $^{232}$Th in copper**  
M. Clemenza, A. Borio di Tigliole, E. Previtali, and A. Salvini  

**A highly efficient neutron veto using boron-loaded liquid scintillator**  
A. Wright, P. Mosteiro, B. Loer, and F. Calaprice  

**The BiPo detector for ultralow radioactivity measurements**  
Mathieu Bongrand and SuperNEMO Collaboration
III. SCREENING FACILITIES AND LOW BACKGROUND DETECTORS

A DUSEL facility for assay and acquisition of radiopure materials
Priscilla Cushman

Low background counting at SNOLAB
Ian Lawson and Bruce Cleveland

Low background physics at the Kimballton Mine
S. MacMullin

Radon monitoring and early low background counting at the Sanford Underground Laboratory
K. J. Thomas, D.-M. Mei, J. Heise, D. Durben, and R. Salve

Status of BetaCage: An ultra-sensitive screeener for surface contamination

IV. FABRICATION METHODS AND SURFACE CONTAMINATION CONTROL

A radon progeny deposition model
V. E. Guiseppe, S. R. Elliott, A. Hime, K. Rielage, and S. Westerdale

Acrylic purification and coatings
Marcin Kuzniak and DEAP Collaboration

Low radioactivity crystals for neutrinoless double beta decay detectors
Ioan Dafinei and CUORE Collaboration

Low radioactivity CaF₂ scintillator crystals for CANDLES

V. EXPERIMENTS USING LOW BACKGROUND TECHNIQUES

Low background techniques in XMASS
Atsushi Takeda and XMASS Collaboration
VI. LOW BACKGROUND CRYOGENIC AND GAS PURIFICATION TECHNIQUES

Low background aspects of GERDA
Hardy Simgen and GERDA Collaboration

Behaviour of $^{222}$Rn at cryogenic temperatures
Sebastian Lindemann, Hardy Simgen, and Grzegorz Zuzel

Low radon cleanroom at the University of Alberta
D. R. Grant, Aksel Hallin, Stephen Hanchurak, Carsten Krauss, Shengli Liu, and Richard Soluk

Radon diffusion measurement in polyethylene based on alpha detection
Wolfgang Rau

VII. LOW BACKGROUND LIQUID PURIFICATION TECHNIQUES

Radio-purification of neodymium chloride
S. Hans, M. Yeh, J. B. Cumming, and R. L. Hahn

Laboratory studies of lead removal from liquid scintillator in preparation for KamLAND's low background phase
Gregory Keefer

Production and counting of uncontained sources in the Sudbury Neutrino Observatory
Simon J. Peeters and SNO Collaboration

SNO+ scintillator purification and assay
R. Ford, M. Chen, O. Chkvorets, D. Hallman, and E. Vázquez-Jáuregui
VIII. BACKGROUND STUDIES, MODELS, AND SIMULATIONS

Background simulations and shielding calculations
Vitaly A. Kudryavtsev 197

Production and suppression of $^{11}$C in the solar neutrino experiment Borexino
Quirin Meindl and Borexino Collaboration 203

A study of radon background in the XENON100 experiment
Marc Weber and XENON100 Collaboration 208

POSTERS

Depleted argon from underground sources

Improved scintillator materials for compact electron antineutrino detectors
Peter Dijkstra, Heinrich J. Wortche, and Wesley R. Browne 221

Removal of the long-lived $^{222}$Rn daughters from steel and germanium surfaces
Marcin Wójcik, Grzegorz Zuzel, and Bela Majorovits 224

LRT 2010 List of Participants 229

Author Index 231
